

Structure Silicon Monolithic Integrated Circuit  
 Product Series 5ch Sensorless System Motor Driver for MD  
 Type **BD6603KVT**  
 Features

- Operates at low power supply voltage (2.3V min.)
- Power DMOS output with low ON resistance (0.8Ω typ.)
- Incorporates a charge pump circuit for VG boost
- 3-phase full-wave sensorless driving system for spindle
- 4ch, 2-value control H-bridges for sled/focus/tracking/head up/down
- 2ch half-bridges for spindle/sled VM power supply

○Absolute maximum ratings (Ta=25°C)

Parameter	Symbol	Limit	Unit
Power supply voltage for control circuit	VCC	7	V
Power supply voltage for driver block	VM	7	V
Power supply voltage for pre-driver block	VG	15	V
Input voltage	VIN	0~VCC	V
Output current	Iomax	*500	mA
Power dissipation	Pd	**1250	mW
Operating temperature range	Topr	-25~+75	°C
Storage temperature range	Tstg	-55~+150	°C
Junction temperature	Tjmax	+150	°C

\* Must not exceed Pd or ASO, Tjmax=150°C.  
 \* \* Reduced by 10.0mW/°C over Ta=25°C, when mounted on a glass epoxy board (70mm×70mm×1.6mm).

○Operating conditions (Ta=-25~+75°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit
Power supply voltage	VCC	2.3	3.0	6.5	V
	VM	—	—	6.5	V
	VG	VM+3	9	14	V
Pulse input frequency	fin	—	—	200	kHz

This product described in this specification is not judged whether it applies to COCOM regulations.  
 Please confirm in case of export.  
 This product is not designed for protection against radioactive rays.

## ○Electrical characteristics

(Unless otherwise specified, Ta=25°C, VCC=3V, VM=2.5V, fin=176kHz)

Parameter	Symbol	Limit			Unit	Conditions
		Min.	Typ.	Max.		
Circuit current	ICC	—	5.6	8.0	mA	at operation in all blocks
	IST	—	16	50	μA	at standby in all blocks
Output ON resistance	RON	—	0.8	1.2	Ω	upper and lower ON resistance in total VG=10V
~Boost circuit~						
Output voltage	VG1	7.5	8.9	10.0	V	each input L
	VG2	6.0	7.3	9.5	V	at operation in all blocks
~Oscillation circuit~						
Self propelled oscillating frequency	fOSC	125	250	400	kHz	
External clock synchronous range	fSYNC	—	—	500	kHz	input from EXTCLK pin
~Spindle (3-phase full-wave sensorless driver) block~						
Position detection comparator offset	VCO	-10	—	+10	mV	
Detection comparator input range	VCD	0	—	VCC-1.0	V	
CST charge current	ICTO	-0.9	-2.1	-3.3	μA	CST=1V
CST discharge current	ICTI	2.0	3.6	5.3	mA	CST=1V
CSL charge current	ICLO	-4.0	-8.0	-12	μA	CSL=VCC-0.4V
CSL discharge current	ICLI	2.0	5.5	5.3	μA	CSL=VCC-0.4V
Brake comparator input current	IBR	—	—	2.0	μA	BRK=VCC
Brake comparator input offset	VBO	-15	—	+15	mV	
Brake comparator input range	VBD	0	—	VCC-1.5	V	
FG output L voltage	VOLF	—	0.2	0.3	V	Io=500μA
~Sled, focus, tracking, head up/down, PWM power supply (H-bridge, half-bridge driver) block~						
Logic H level input voltage	VINH	VCC-0.4	—	—	V	
Logic L level input voltage	VINL	—	—	0.4	V	
Logic H level input current	IINH1	—	—	1	μA	VIN=3V
	IINH2	—	350	600	μA	VIN=3V EXTCLK pin
Logic L level input current	IINL	-1	—	—	μA	VIN=0V
Output propagation delay time	TRISE	—	0.2	1	μsec	
	TFALL	—	0.1	0.7	μsec	
Minimum input pulse width	tmin	200	—	—	nsec	output pulse width 2/3tmin or more

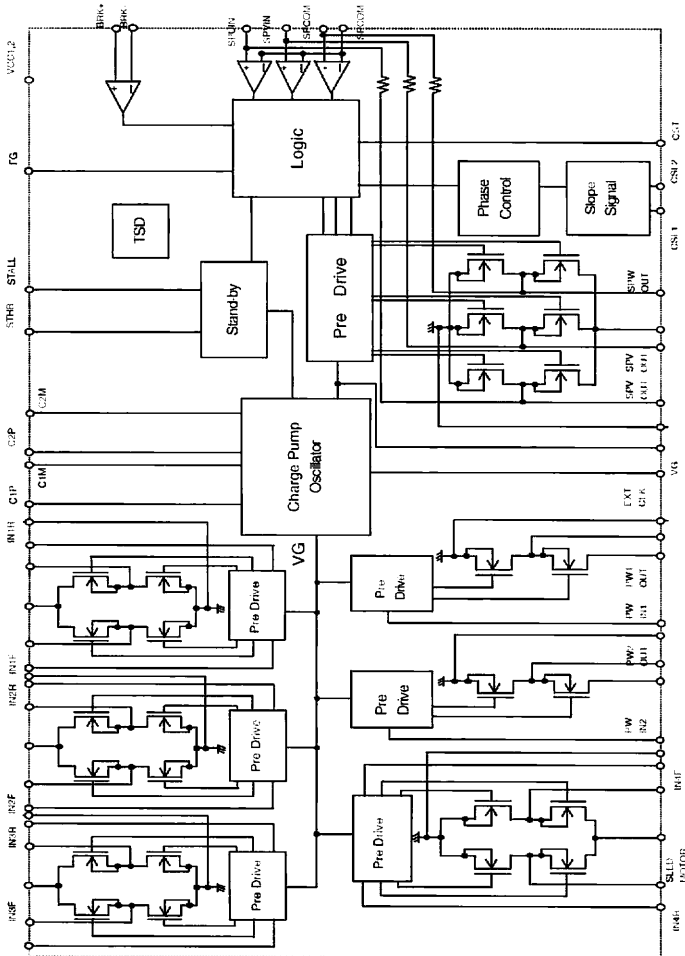

◎This product is not designed for protection against radioactive rays.

○Notes on the use

- (1) Absolute maximum ratings  
If the input voltage or the operating temperature range exceeds absolute maximum ratings, IC may be damaged. No destruction mode (e.g., short-circuiting or open) can be specified in that case. If such special mode as will exceed absolute maximum ratings is assumed, take the physical safety measures, such as a fuse.
- (2) Power supply lines  
The regenerated current by BEMF of the motor will return. Therefore, take measures, such as the insertion of a capacitor between the power supply and GND as the pass of the regenerated current. Determine the capacitance in full consideration of all the characteristics of the electrolytic capacitor, because the electrolytic capacitor may loose some capacitance at low temperatures.
- (3) Ground potential  
Ensure a minimum GND pin potential in all operating conditions.
- (4) Design for heat  
Use the design for heat that allows for a sufficient margin in light of the power dissipation (Pd) in actual using conditions.
- (5) Operation in strong magnetic field  
Use caution when using the IC in the strong magnetic field as doing so may cause the IC to malfunction.
- (6) ASO  
When using the IC, make settings so that the output transistors for the motor will not be used under conditions in excess of the absolute maximum ratings and ASO.

(7) Thermal shutdown circuit

This IC incorporates thermal shutdown circuit(TSD circuit).

When the chip temperature becomes the one shown in below, TSD circuit operates and makes the coil output to motor open. It is designed to shut the IC off from runaway thermal operation. It is not designed to protect the IC or guarantee its operation. Do not continue to use the IC after operating this circuit or use the IC in an environment where the operation of this circuit is assumed.

TSD ON temperature[°C] (typ.)	Hysteresis emperature [°C] (typ.)
175	20

(8) Ground wiring pattern

When having both small signal and large current GND, it is recommended to isolate the two GND patterns, placing a single ground point at the application's reference point so that the pattern wiring resistance and voltage variations caused by large currents do not cause voltage variations of the small signal GND. Be careful not to change the GND wiring pattern of any external parts, either.

### Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

#### About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
