

### Device Features

- 7-bit Serial & Parallel Interface
- 31.75 dB Control Range 0.25 dB step
- Support addressable Function (Addr0-Addr7)
- Glitch-safe attenuation state transitions
- 2.5 V to 5.5 V supply
- Excellent Attenuation Accuracy  
Any bit Attenuation Error <  $\pm 0.5$  dB up to 6GHz
- Low Insertion Loss
  - 0.6 dB @ 1GHz
  - 0.8 dB @ 2GHz
  - 1.1 dB @ 3GHz
  - 1.4 dB @ 4GHz
  - 2.0 dB @ 5GHz
  - 2.6 dB @ 6GHz
  - 2.7 dB @ 7GHz
- Ultra linearity IIP3 > +68 dBm @ 3.5GHz, ATT=0dB
- Input 0.1dB Compression (P0.1dB) 30dBm @ 3.5GHz, ATT=0dB
- Programming modes
  - Direct parallel
  - Latched parallel
  - Serial Addressable
- Stable Integral Non-Linearity over temperature
- Low Current Consumption 200  $\mu$ A typical
- -40 °C to +105 °C operating temperature
- ESD rating : Class1C (1KV HBM)
- Lead-free/RoHS2-compliant 32-lead 5mm x 5 mm x 0.9mm QFN SMT package

32-lead 5mm x 5 mm x 0.9mm QFN

### Product Description

The BDA4730 is a broadband, Highly accurate 50 $\Omega$  digital step attenuator model which provides adjustable attenuation from 0 to 31.75 dB in 0.25 dB steps. The control interface supports a 7-bit serial interface with 3-bit addressable function and latched parallel interface.

The BDA4730 has an optional function of using a negative voltage through  $V_{SS\_EXT}$  pin for improved spurious performance. This option is an optimized function that can be applied to test and measurement equipment.

BDA4730 supports a broad operating frequency range from 9KHz to 8.0 GHz. BDA4730 is offering the High linearity, low power consumption, low insertion loss, high attenuation accuracy and low insertion loss less than 2.8dB typical at all frequency band. The device features a safe state transitions with no negative/positive Glitch technology optimized for excellent step accuracy.

The RF input and output are internally matched to 50  $\Omega$  and do not require any external matching components. The design is bi-directional; Therefore, the RF input and output are interchangeable.

The BDA4730 does not require blocking capacitors. If DC is presented at the RF port, add a blocking capacitor. This is packaged in a RoHS2-compliant with QFN surface mount package.

### Application

- 5G/4G+/4G/3G Cellular Base station/Repeater Infrastructure
- Test and measurement (T&M)
- Digital Pre-Distortion
- Distributed Antenna Systems, DAS
- Remote Radio Heads
- NFC Infrastructure
- Test Equipment and sensors
- Military Wireless system
- Cable Infrastructure
- General purpose Wireless

	CDM <sup>2</sup>	ESD <sub>CDM</sub>		±1000 (Class C3)	V	

Operation of this device above any of these parameters may result in permanent damage.

1. HBM : Human Body Model (JEDEC Standard JS-001-2017)
2. CDM : Charged Device Model (JEDEC Standard JS-002-2018)

**Figure 3. Pin Configuration (Top View)**

**Table 4. Pin Description**

Pin	Pin name	Description
1, 5, 6, 8-17, 19	GND	Ground, These pins must be connected to ground
2	VDD	Power Supply (nominal 3.3V)
3	P/S	Parallel/Serial Mode Select. For parallel mode operation, set this pin to LOW. For serial mode operation, set this pin to HIGH.
4	A0	Address bit A0 connection.
5	RF1 <sup>1</sup>	RF1 port (Attenuator RF Input) This pin can also be used as an output because the design is bidirectional. RF1 is dc-coupled and matched to 50 Ω
18	RF2 <sup>1</sup>	RF2 port (Attenuator RF Output.) This pin can also be used as an input because the design is bidirectional. RF2 is dc-coupled and matched to 50 Ω.
20	V <sub>SS_EXT</sub> <sup>3</sup>	External VSS negative voltage control. If not use the externally negative voltage, This pin must be Ground.
21	A2	Address bit A2 connection.
22	A1	Address bit A1 connection.
23	LE	Latch Enable input
24	CLK	Serial interface clock input
25	SERIN	Serial interface data input
26	D6 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 16dB
27	D5 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 8dB
28	D4 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 4dB
29	D3 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 2dB
30	D2 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 1dB
31	D1 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 0.5dB
32	D0 <sup>2</sup>	Parallel Control Voltage Inputs, Attenuation control bit 0.25dB
Pad	GND	Exposed pad: The exposed pad must be connected to ground for proper operation

1. RF pins 5 and 18 must be at 0V DC. The RF pins do not require DC blocking capacitors for proper Operation if the 0V DC requirement is met

2. Ground D0 - D6 if not used or serial mode.

3. Connect V<sub>SS\_EXT</sub> (pin 20) to GND (V<sub>SS\_EXT</sub> = 0V) to enable internal negative voltage generator, And use V<sub>SS\_EXT</sub> (pin 20) to bypass and disable internal negative voltage generator.

### Programming Options

BDA4730 can be programmed using either the parallel or serial interface, which is selectable via P/S pin(Pin3).

Serial mode is selected by pulling it to a voltage logic HIGH and parallel mode is selected by setting P/S to logic LOW

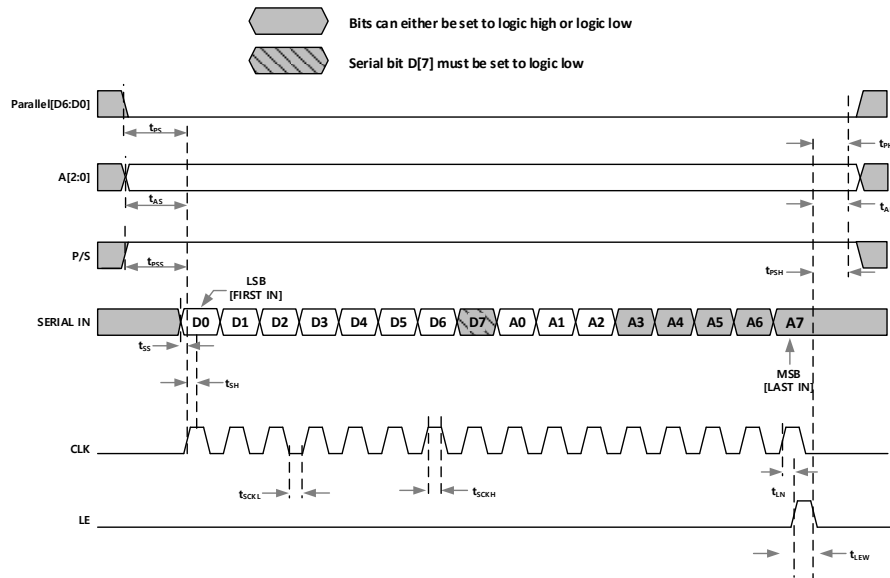

### Serial Control Mode

The serial interface is a 7-bit shift register to shift in the data LSB (D0) first. When serial programming is used, It is recommended all the parallel control input pins (26, 27, 28, 29, 30, 31, 32) are grounded. It is controlled by three CMOS-compatible signals: SERIN, Clock, and Latch Enable (LE).

**Table 5. Truth Table for Serial Control Word**

Digital Control Input								Attenuation
D7 (MSB)	D6	D5	D4	D3	D2	D1	D0 (LSB)	state (dB)
LOW	LOW	LOW	LOW	LOW	LOW	LOW	LOW	0 (RL)
LOW	LOW	LOW	LOW	LOW	LOW	LOW	HIGH	0.25
LOW	LOW	LOW	LOW	LOW	LOW	HIGH	LOW	0.5
LOW	LOW	LOW	LOW	LOW	HIGH	LOW	LOW	1.0
LOW	LOW	LOW	LOW	HIGH	LOW	LOW	LOW	2.0
LOW	LOW	LOW	HIGH	LOW	LOW	LOW	LOW	4.0
LOW	LOW	HIGH	LOW	LOW	LOW	LOW	LOW	8.0
LOW	HIGH	LOW	LOW	LOW	LOW	LOW	LOW	16.0
LOW	HIGH	HIGH	HIGH	HIGH	HIGH	HIGH	HIGH	31.75

**Figure 4. Serial Mode Timing Diagram**

BDA4730 Serial mode is selected by pulling it to logic HIGH. The serial interface is a 16-bit shift register made up of two words. The first 8-bit word is the Attenuation word, which controls the DSA state. The second word is the address word, which uses only 3 of 8-bits that must match the hard wired A0-A2 programming in order to change the DSA state. If no external connections are made to A0 – A2 then internally they will default to 000 due to internal pull down resistors. If these 3 external preset address bits are not matched with the SPI loaded address bits then the current attenuator state will remain unchanged. This allows up to 8 serial-controlled devices to be used on a single board, which share a common SERIN, CLK and LE.

When serial programming is used, all the parallel control input pins 26 – 32 can be left open or grounded.

**Table 6. Serial Interface Timing Specifications**

Symbol	Parameter	Min	Typ	Max	Unit
$f_{CLK}$	Serial data clock frequency			10	MHz
$t_{PS}$	Parallel data setup time	100			ns
$t_{PH}$	Parallel data hold time	100			ns
$t_{AS}$	Address setup time	100			ns
$t_{AH}$	Address hold time	100			ns
$t_{PSS}$	Parallel/Serial setup time	100			ns
$t_{PSH}$	Parallel/Serial hold time	100			ns
$t_{SS}$	Serial Data setup time	10			ns
$t_{SH}$	Serial Data hold time	10			ns
$t_{SCKH}$	Serial clock high time	30			ns
$t_{SCKL}$	Serial clock low time	30			ns
$t_{LN}$	LE setup time	10			ns
$t_{LEW}$	Minimum LE pulse width	30			ns

### Serial Register Map

The BDA4730 can be programmed via the serial control on the rising edge of Latch Enable (LE) which loads the last 8-bits attenuation word and 8-bits address word in the SHIFT Register. Data is clocked in LSB(D0) first. The shift register must be loaded while LE is kept LOW to prevent changing the attenuation value during data is inputted.

**Figure 5. Serial Register Map**

The serial register consist of 16 bits as shown in Figure 5. First 8 bits from LSB are Attenuation word, 8 bits after that are Address word. The Attenuation word is DSA attenuation control bit and the Address word is static logical bit determined by A0, A1 and A2 digital inputs. The attenuation word is derived directly from the value of the attenuation state. To find the attenuation word, multiply the value of the state by four because of 0.25dB step up to 31.75dB ( total 127 Attenuation state), then convert to binary.

For example, to program attenuation 15.75dB state of Addr[5] BDA4730 :

Attenuation State	Address state
4 x 15.75 = 63	Digital input of A2, A1, A0 pin = 101
63 -> 00111111	A7 - A0 : xxxxx101

Serial Input : xxxxx10100111111

x	x	x	x	x	x	1	0	1	0	0	1	1	1	1	1	1
A7	A6	A5	A4	A3	A2	A1	A0	D7	D6	D5	D4	D3	D2	D1	D0	

**Table 7. Truth Table for Address Control Word**

Address Digital Control Input								Address Setting	Addr No.
A7 (MSB)	A6	A5	A4	A3	A2	A1	A0 (LSB)		
X	X	X	X	X	LOW	LOW	LOW	000	Addr[0]
X	X	X	X	X	LOW	LOW	HIGH	001	Addr[1]

X	X	X	X	X	HIGH	LOW	LOW	100	Addr[4]
X	X	X	X	X	HIGH	LOW	HIGH	101	Addr[5]
X	X	X	X	X	HIGH	HIGH	LOW	110	Addr[6]
X	X	X	X	X	HIGH	HIGH	HIGH	111	Addr[7]

**Table 8. Mode Selection**

P/S	Control Mode
LOW	Parallel
HIGH	Serial

### Power-UP states Settings

The BDA4730 will always initialize to the maximum attenuation setting (31.75 dB) on power-up for both the Serial and Latched Parallel modes of operation and will remain in this setting until the user latches in the next programming word. In Direct Parallel mode, the DSA can be preset to any state within the 31.75 dB range by pre-setting the Parallel control pins prior to power-up. In this mode, there is a 400 μs delay between the time the DSA is powered-up to the time the desired state is set.

**Figure 6. Default Attenuation Word for Power-up state**

### Programming Options

#### Parallel Control Mode

The parallel control interface has seven digital control input lines (D6 to D0) to set the attenuation value. D6 is the most significant bit (MSB) that selects the 16 dB attenuator stage, and D0 is the least significant bit (LSB) that selects the 0.25 dB attenuator stage (see Figure 7).

#### Direct Parallel Mode

For direct parallel mode, The LE pin must be kept HIGH. The attenuation state is changed by the control voltage inputs (D0 to D6) directly. This mode is ideal for manual control of the attenuator. In this mode the device will immediately react to any voltage changes to the parallel control pins [pins 26, 27, 28, 29, 30, 31, 32]. Use direct parallel mode for the fastest settling time. (refer to page 21)

#### Latched Parallel Mode

The LE pin must be kept LOW when changing the control voltage inputs (D0 to D6) to set the attenuation state. When the desired state is set, LE must be toggled HIGH to transfer the 7-bit data to the bypass switches of the attenuator array, and then toggled LOW to latch the change into the device until the next desired attenuation change (see Figure 7 and Table 8).

- Set P/S is logic LOW.
- Set LE to logic LOW.
- Adjust pins [26, 27, 28, 29, 30, 31, 32] to the desired attenuation setting. (Note the device will not react to these pins while LE is a logic LOW).
- Pull LE to a logic HIGH. The device will then transition to the attenuation settings reflected by pins D6 - D0.
- If LE is pulled to a logic LOW then the attenuator will not change state.

Latched Parallel Mode implies a default state for when the device is first powered up with P/S pin set for logic LOW and LE logic LOW. In this case the default setting is **Maximum attenuation**.

### Switching Feature Description

#### Glitch-Safe Attenuation State Transient

The BDA4730 is the latest product applied *Glitch-Safe* technology with less than 1dB ringing (pos/neg) across the attenuation range when changing attenuation states. This technology protects Amplifiers or ADC during transitions between attenuation states. (see Figure 40,41).

**Table 9. Truth Table for the Parallel Control Word**

D6	D5	D4	D3	D2	D1	D0	P/S	LE	Attenuation State(dB)
LOW	LOW	LOW	LOW	LOW	LOW	LOW	LOW	HIGH	0 (RL)

### BDA4730 Evaluation board Kit Description

**Figure 42. BDA4730 EVK**

#### Evaluation board Kit Introduction

BDA4730 Evaluation Kit is made up of a combination of an RF board and an interface board

The schematic of the BDA4730 evaluation RF board is shown in Figure 34. The BDA4730 evaluation RF board is constructed of a 4-layer material with a copper thickness of 0.7 mil on each layer. Every copper layer is separated with a dielectric material. The top dielectric material is 8 mils RO4003. The middle and bottom dielectric materials are FR-4, used for mechanical strength and overall board thickness of approximately 1.63mm.

BDA4730 Evaluation INTERFACE board is assembled with a SP3T switches(D0~D6,LE), SP2T mechanical switch (P/S), and several header & switch.

#### Evaluation Board Programming Using USB Interface

In order to evaluate the BDA4730 performance, the Application Software has to be installed on your computer. And The DSA application software GUI supports Latched Parallel and Serial modes. software can be downloaded from BeRex's website

#### Serial Control Mode

- Set the Address Jumper (A0, A1, A2) to HIGH or LOW (Refer to Address Table 7)
- Connect directly the Evaluation INTERFACE board USB port(J3) to PC
- Set the direction of P<->S Switch to S direction (P/S Logic HIGH)
- Set the D0~D6,LE switch to the middle position.
- Operate the 0~31.75dB attenuation state in GUI and then control the DSA

#### Latched Parallel Control Mode

- Connect directly the Evaluation INTERFACE board USB port(J3) to PC
- Set the direction of P<->S Switch to P direction (P/S Logic LOW)
- Set the D0~D6, LE switch to the middle position.
- Operate the 0~31.75dB attenuation state in GUI and then control the DSA

#### Direct Parallel Control Mode

- Set the direction of P<->S Switch to P direction (P/S Logic LOW)
- Set LE switch to the LOW Position
- For the setting to attenuation state, D0~D6 switches can be combined in manually program, refer to Table 9.

Please refer to user manual for more detailed operation method of BDA4730 EVK.

### BDA4730 Evaluation board Kit Description

Figure 43. Evaluation Board Kit Schematic Diagram

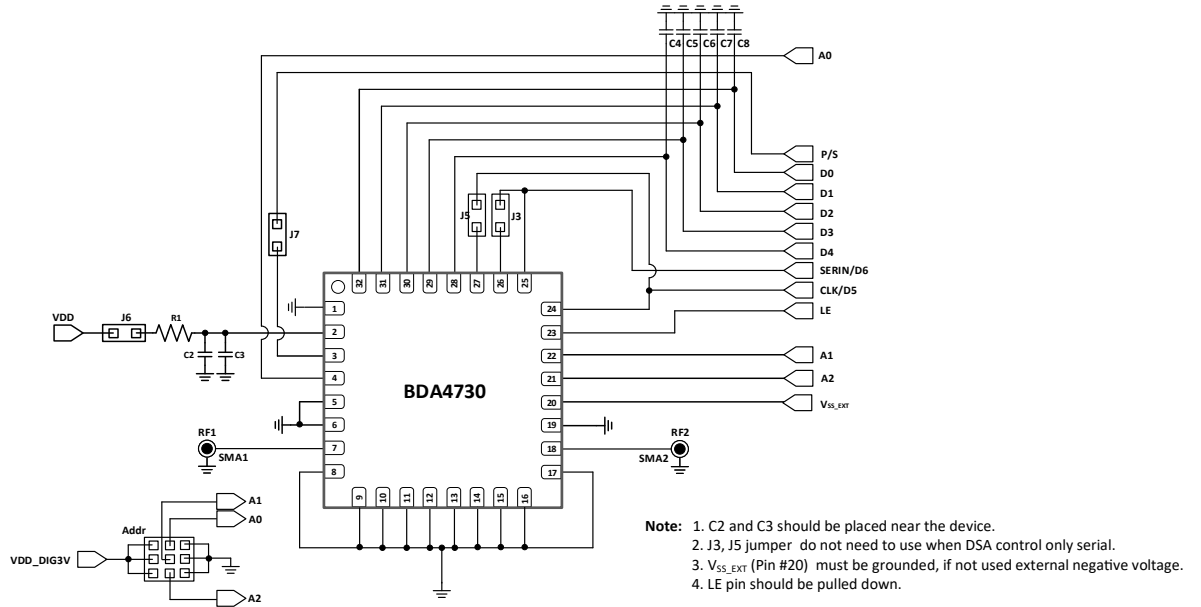

Figure 44. Evaluation Board PCB Layout Information 50Ω

Table 11. Bill of Material - Evaluation Board

No.	Ref Des	Part Qty	Value	Description	Remark
1	C3,C4-C8	6	100pF	CAP, 0402, CHIP Ceramic, ±0.25%	
2	C2	1	100nF	CAP, 0402, CHIP Ceramic, ±0.25%	
3	R1	1	0 ohm	RES, 0402, CHIP, ±5%	
4	C1,R2	2	NC		
5	SMA1, SMA2	2	CON	SMA END LAUNCH	
6	U1	1	Chip	DSA, BDA4730 QFN5x5 32L	

Figure 45. Evaluation Board PCB Layer Information 50Ω

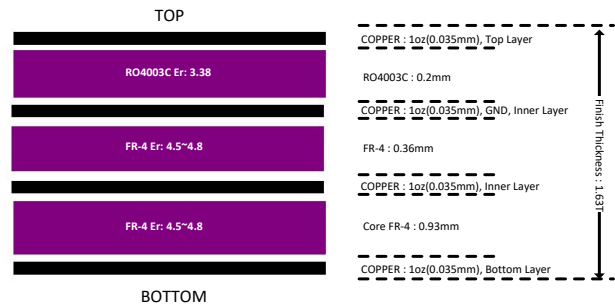

Figure 46. Recommended Serial mode Application Schematic

**Note:** 1. C1 and C2 should be placed near the device.

2. Recommended to add pull-down resistor(R1) at the LE pin.

3. Addressable Pin A0,A1,A2 can be set according to the specified address. If the specified address is 000, all addressable pin(A0,A1,A2) should be grounded.

Figure 47. Packing Outline Dimension

**NOTE :**

1. Dimensioning and tolerancing conform to ASME Y14.5-2009.
2. All dimensions are in millimeters.
3. N is the total number of terminals.
4. The location of the marked terminal #1 identifier is within the hatched area.
5. ND and NE refer to the number of terminals on each D and E side respectively.
6. Dimension b applies to the metallized terminal and is measured between 0.15mm and 0.30mm from the terminal tip. If the terminal has a radius on the other end of it, dimension b should not be measured in that radius area.
7. Coplanarity applies to the terminals and all other bottom surface metallization

Dimension Table				
Symbol	Thickness			NOTE
	MINIMUM	NOMINAL	MAXIMUM	
A	0.8	0.9	1	
A1	0	0.02	0.05	
A3	---	0.203 Ref	---	
b	0.2	0.25	0.3	6
D		5.0 BSC		
D2	3.05	3.10	3.15	
E		5.0 BSC		
E2	3.05	3.10	3.15	
e		0.5 BSC		
K	0.2	---	---	
L	0.3	0.4	0.5	
aaa		0.05		
bbb		0.1		
ccc		0.1		
ddd		0.05		
eee		0.08		
N		32		3
ND		8		5
NE		8		5

Figure 48. Recommend Land Pattern

Figure 49. Package Marking

Marking information:	
BDA4730	Device Name
YY	Year
WW	Work Week
XX	LOT Number

Figure 50. Tape & Reel

NOTES:

- 1 10 SPROCKET HOLE PITCH CUMULATIVE TOLERANCE  $\pm 0.2$
- 2 CAMBER IN COMPLIANCE WITH EIA 481
- 3 POCKET POSITION RELATIVE TO SPROCKET HOLE MEASURED AS TRUE POSITION OF POCKET, NOT POCKET HOLE

Packaging information:	
Tape Width	12mm
Reel Size	7inch
Device Cavity Pitch	8mm
Devices Per Reel	1k

**Lead plating finish**

100% Tin Matte finish

(All BeRex products undergoes a 1 hour, 150 degree C, Anneal bake to eliminate thin whisker growth concerns.)

**MSL / ESD Rating**

**ESD Rating:** Class 1C  
**Value:** ±1000V  
**Test:** Human Body Model (HBM)  
**Standard:** JEDEC Standard JS-001-2017

**ESD Rating:** Class C3  
**Value:** ±1000V  
**Test:** Charged Device Model (CDM)  
**Standard:** JEDEC Standard JS-002-2018

**MSL Rating:** **Level 1 at +260°C convection reflow**  
**Standard:** JEDEC Standard J-STD-020

Proper ESD procedures should be followed when handling the device.

**RoHS Compliance**

This part is compliant with Restrictions on the use of certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) Directive 2011/65/EU as amended by Directive 2015/863/EU.

This product also is compliant with a concentration of the Substances of Very High Concern (SVHC) candidate list which are contained in a quantity of less than 0.1%(w/w) in each components of a product and/or its packaging placed on the European Community market by the BeRex and Suppliers.

**NATO CAGE code:**
