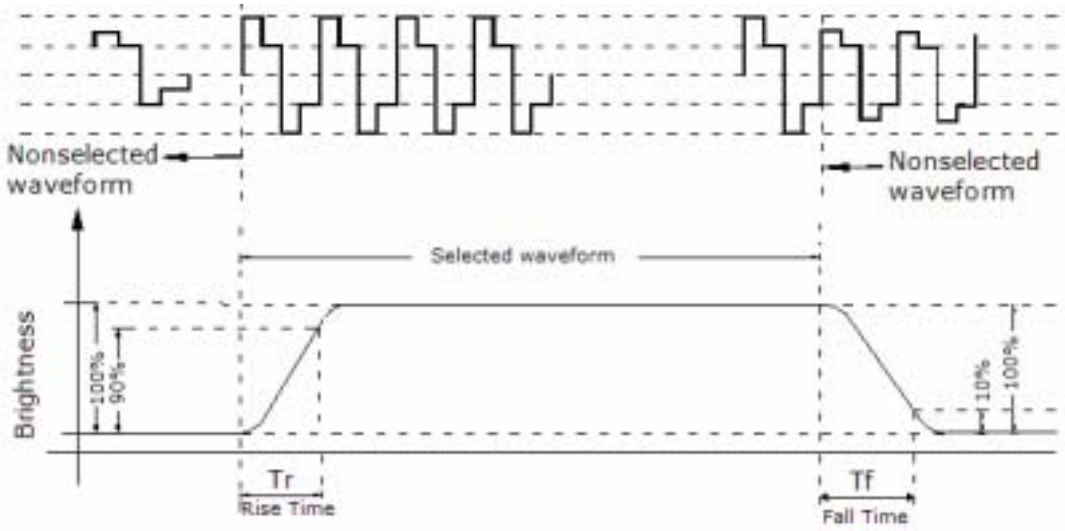
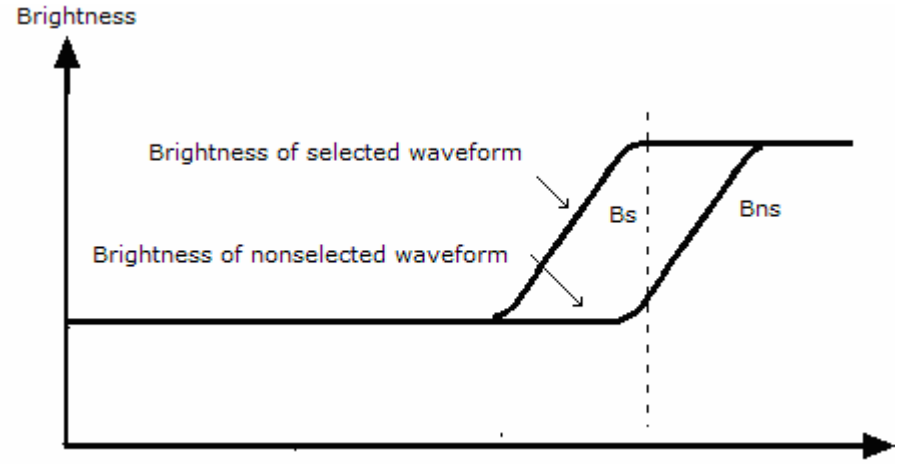
Response Time



Measuring Condition:

1. Driving waveform:1/N Duty,1/a Bias selected waveform.
2. Driving Frequency: Typical value in Individual specification.
3. Operating Voltage : LCD driving voltage getting maximum contrast rate.
4. Measuring Angle : See Individual Specification.
5. Measuring Temperature :See Individual Specification .

Contrast Ratio Definition



Negative Type

$$\text{Contrast Ratio(Cr)} = \frac{\text{Brightness of non-selected waveform(Bns)}}{\text{Brightness of selected waveform(Bs)}}$$

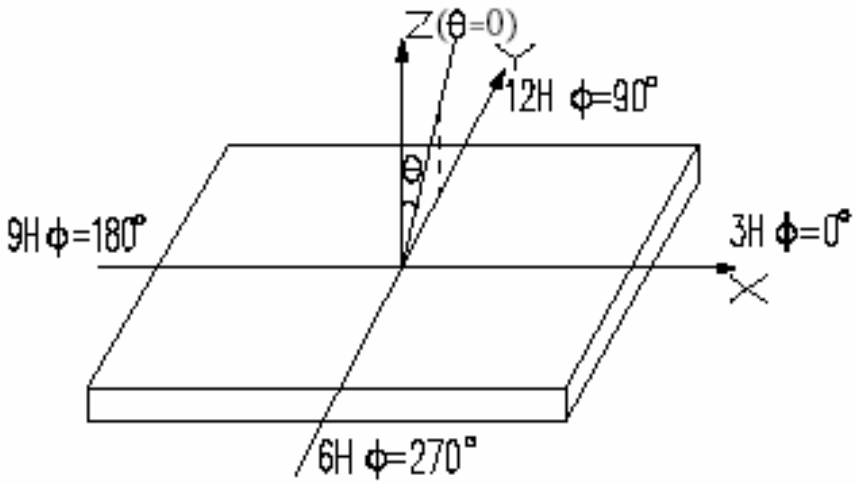
Viewing Angle

θ: Angle between Viewer Direction and Normal.

(-90°≤ θ ≤90°)

ϕ : Angle between Projection of Viewer Direction to X-Y plane and Y axis.

(0°≤ϕ≤360°)



Measuring Condition

1. Driving Voltage: Same as VLCD.
2. Driving Frequency: Same as Frame Frequency

11-3. Reliability of LCM

Reliability test condition:

Item Condition		Time (hrs)	Assessment
High te mp. Storage	70°C	240	No abnormalities in functions and appearance
High tem p. Operating	50°C	240	
Low tem p. S torage	-20°C	240	
Low temp. Operating	0°C	240	
Humidity	40°C/ 90%RH	240	
Temp. Cycle	-20°C ← 25°C →70°C (1 hour← 5 min → 1 hour)	10cycles	

Recovery time should be 24 hours minimum. Moreover, functions, performance and appearance shall be free from remarkable deterioration within 50,000 hours under ordinary operating and storage conditions room temperature (20±8°C), normal humidity (below 65% RH), and in the area not exposed to direct sun light.

11-4. Precaution for using LCM

LCM is assembled and adjusted with a high degree of precision. Do not attem pt to make any alteration or modification. The followings should be noted.

General Precautions:

1. LCD panel is made of glass. Avoid excessive mechanical shock or applying strong pressure onto the surface of display area.
2. The polarizer used on the display surface is easily scratched and damaged. Extreme care should be taken when handling. To clean dust or dirt off the display surface, wipe gently with cotton, or other soft material soaked with isoproply alcohol, ethyl alcohol or trichl o otrifl or othane, do not use water, ketone or aromatics and never scrub hard.
3. Do not tamper in any way with the tabs on the metal frame.
4. Do not made any modification on the PCB without consulting YB.
5. When mounting a LCM, m ake sure that the PCB is not under any stress such as bending or twisting. Elastom er contacts are very de licate and m issing pixe ls could result fro m slight dislocation of any of the elements.
6. Avoid pressing on the m etal bezel, otherwise th e elastomer connector could be def ormed and lose contact, resulting in missing pixels and also cause rainbow on the display.
7. Be careful not to touch or sw allow liqu id c rystal that m ight leak f rom a dam aged cell. Any liquid crystal adheres to skin or clo thes, wash it o ff imm ediately with soap and water.

Static Electricity Precautions:

1. CMOS-LSI is used for the m odule circui t; therefore operators should be grounde d whenever he/she comes into contact with the module.
2. Do not touch any of the conduc tive parts such as the LSI pads; the copper leads on the PCB and the interface terminals with any parts of the human body.
3. Do not tou ch the con nection ter minals of th e display with bare hand; it will cause disconnection or defective insulation of terminals.
4. The modules should be kept in anti-static bags or other containers re sistant to static for storage.
5. Only properly grounded soldering irons should be used.
6. If an electric screwdriver is used, it should be grounded and shielded to prevent sparks.
7. The normal static prevention m easures should be observed for work clothes and working benches.
8. Since dry air is inductive to static, a relative humidity of 50-60% is recommended.

Soldering Precautions:

1. Soldering should be performed only on the I/O terminals.
2. Use soldering irons with proper grounding and no leakage.
3. Soldering temperature: 300°C±10°C
4. Soldering time: 3 to 4 second.
5. Use eutectic solder with resin flux filling.
6. If flux is used, the LCD surface should be protected to avoid spattering flux.
7. Flux residue should be removed.

Operation Precautions:

1. The viewing angle can be adjusted by varying the LCD driving voltage Vo.
2. Since applied DC voltage causes electro-chemical reactions, which deteriorate the display, the applied pulse waveform should be a symmetric waveform such that no DC component remains. Be sure to use the specified operating voltage.
3. Driving voltage should be kept within specified range; excess voltage will shorten display life.
4. Response time increases with decrease in temperature.
5. Display color may be affected at temperatures above its operational range.

Operation Precautions:

1. Keep the temperature within the specified range usage and storage. Excessive temperature and humidity could cause polarization degradation, polarizer peel-off or generate bubbles.
2. For long-term storage over 40 °C is required, the relative hu midity should be kept below 60%. Avoid direct sunlight.

Limited Warranty

YB LCDs and m odules are not consum er pr oducts, but m ay be incorporated by YB's customers into consumer products or components thereof, YB does not warrant that its LCDs and components are fit for any such particular purpose.

1. The liability of YB is lim ited to repair or rep lacement on the term s set forth below. YB will not be responsible for any sub sequent or consequential events or injury or damage to any personnel or user incl uding third party personnel a nd/or user. Unless otherwise agreed in writing between YB and the custom er, YB will only replac e or repair any o f its

LCD which is found defective electrically or visually when inspected in accordance with YB GENERAL LCD INSPECTION STANDARD. (Copies available on request)

2. No warranty can be granted if any of the precautions state in handling liquid crystal display above has been disregarded. Broken glass, scratches on polarizer mechanical damages as well as defects that are caused accelerated environment tests are excluded from warranty.

3. In returning the LCD/LCM, they must be properly packaged; there should be detailed description of the failures or defect.

12. DESCRIBE TO THE PART NO:
