n FEATURES

- Wide V_{CC} low operation voltage : 1.65V ~ 3.6V
- Ultra low power consumption :
  - V_{CC} = 3.6V Operation current : 12mA (Max.) at 55ns
    2mA (Max.) at 1MHz
    Standby current : 2.5uA (Typ.) at 3.0V/25^{O}C
  - V_{CC} = 1.2V Data retention current : 1.2uA (Typ.) at 25^{O}C
- High speed access time :
  - -55 55ns (Max.) at V_{CC}=1.65~3.6V
- Automatic power down when chip is deselected
- Easy expansion with $\overline{CE1}$, CE2 and $\overline{OE}$ options
- Three state outputs and TTL compatible
- Fully static operation, no clock, no refresh
- Data retention supply voltage as low as 1.0V

n DESCRIPTION

The BH62UV8001 is a high performance, ultra low power CMOS Static Random Access Memory organized as 1,048,576 by 8 bits and operates in a wide range of 1.65V to 3.6V supply voltage.

Advanced CMOS technology and circuit techniques provide both high speed and low power features with typical operating current of 1.5mA at 1MHz at 3.6V/25^{O}C and maximum access time of 55ns at 1.65V/85^{O}C.

Easy memory expansion is provided by an active LOW chip enable ($\overline{CE1}$), an active HIGH chip enable (CE2) and active LOW output enable ($\overline{OE}$) and three-state output drivers.

The BH62UV8001 has an automatic power down feature, reducing the power consumption significantly when chip is deselected.

The BH62UV8001 is available in DICE form and 48-ball BGA package.

n PIN DESCRIPTIONS

Name	Function
A0-A19 Address Input	These 20 address inputs select one of the 1,048,576 x 8 bit in the RAM
$\overline{CE1}$ Chip Enable 1 Input **CE2 Chip Enable 2 Input**	$\overline{CE1}$ is active LOW and CE2 is active HIGH. Both chip enables must be active when data read from or write to the device. If either chip enable is not active, the device is deselected and is in standby power mode. The DQ pins will be in the high impedance state when the device is deselected.
$\overline{WE}$ Write Enable Input	The write enable input is active LOW and controls read and write operations. With the chip selected, when $\overline{WE}$ is HIGH and $\overline{OE}$ is LOW, output data will be present on the DQ pins; when $\overline{WE}$ is LOW, the data present on the DQ pins will be written into the selected memory location.
$\overline{OE}$ Output Enable Input	The output enable input is active LOW. If the output enable is active while the chip is selected and the write enable is inactive, data will be present on the DQ pins and they will be enabled. The DQ pins will be in the high impendence state when $\overline{OE}$ is inactive.
DQ0-DQ7 Data Input/Output Ports	8 bi-directional ports are used to read data from or write data into the RAM.

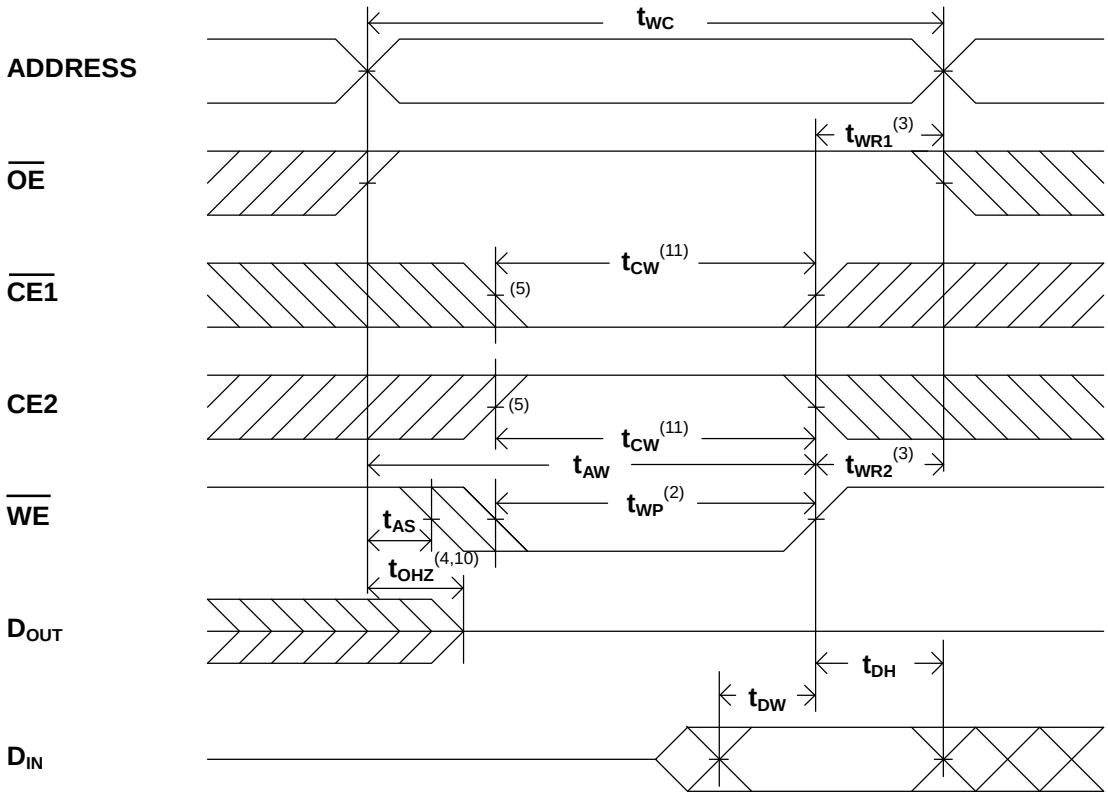
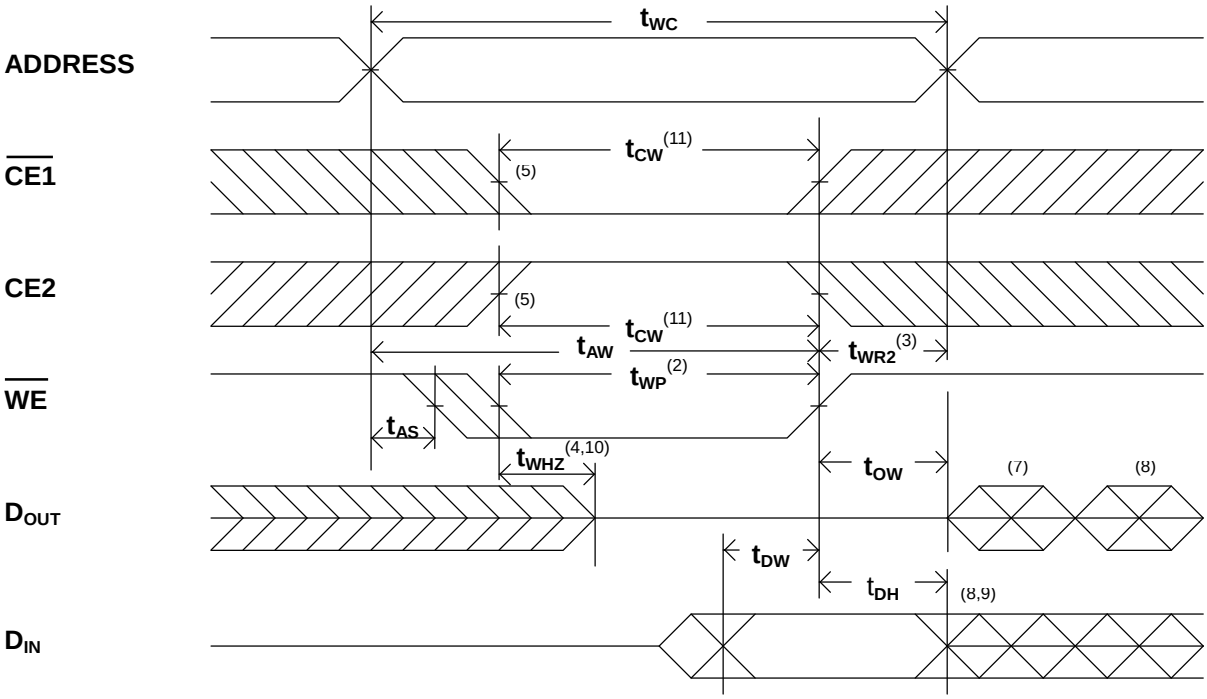
n SWITCHING WAVEFORMS (WRITE CYCLE)

WRITE CYCLE 1 (1)



WRITE CYCLE 2 (1,6)



NOTES:
1. WE must be high during address transitions.
2. The internal write time of the memory is defined by the overlap of CE1 and CE2 active and WE low. All signals must be active to initiate a write and any one signal can terminate a write by going inactive. The data input setup and hold timing should be referenced to the second transition edge of the signal that terminates the write.
3. t_{WR} is measured from the earlier of CE1 or WE going high or CE2 going low at the end of write cycle.
4. During this period, DQ pins are in the output state so that the input signals of opposite phase to the outputs must not be applied.
5. If the CE1 low transition or the CE2 high transition occurs simultaneously with the WE low transitions or after the WE transition, output remain in a high impedance state.
6. OE is continuously low (OE = V_{IL}).
7. D_{OUT} is the same phase of write data of this write cycle.
8. D_{OUT} is the read data of next address.
9. If CE1 is low and CE2 is high during this period, DQ pins are in the output state. Then the data input signals of opposite phase to the outputs must not be applied to them.
10. Transition is measured ± 500mV from steady state with C_L = 5pF. The parameter is guaranteed but not 100% tested.
11. t_{CW} is measured from the later of CE1 going low or CE2 going high to the end of write.
