

## 2A Low Consumption Linear Regulator

### DESCRIPTION

BL8072 is a series of low power consumption, low dropout voltage regulator with a typical dropout voltage of 1.0V at 2A load current.

BL8072 can provide output value in the range of 1.2V~5.0V in 0.1V steps. It also can customized on command.

Other than every voltage version can be used as an adjustable voltage version, with which desired voltage can be achieved by setting the values of two external resistors of the application circuitry.

BL8072 has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within  $\pm 2\%$ .

BL8072 series is available in standard packages of SOT-223 and TO-252.

### FEATURES

- Low Power Consumption: 3.0uA (Typ.)
- Maximum output current : 2A
- Maximum input voltage: 18V
- Line regulation: 0.2% (Typical)
- Output Voltage Range: 1.2V~5.0V (customized on command in 0.1V steps)
- Highly Accurate:  $\pm 2\%$  ( $\pm 1\%$  customized)
- Typical Dropout Voltage: 850mV@1.5A ( $V_{out}=3.3V$ )
- Operation environment Temperature:  $-40^{\circ}C \sim 85^{\circ}C$

### APPLICATIONS

- Battery Charger
- Battery Powered equipment
- Post Regulators for Switching Supplies
- Reference Voltage Source Regulation after Switching Power

### TYPICAL APPLICATION

**Note1:** Line Regulation and Load Regulation in Table1 are tested under constant junction temperature.

**Note2:** When load current varies between 0~2A and  $V_{in}-V_{out}$  ranges from 1V~18V at constant junction temperature, the parameter is satisfied the criterion in table.

**Note3:** Dropout Voltage is the voltage difference between the input and output pin when the input voltage is minimum to maintain the lowest spec output voltage.

## BLOCK DIAGRAM

## DETAILED DESCRIPTION

BL8072 is a series of low dropout voltage and low power consumption regulator. Its application circuitry requires minimum number of external components. Both fixed voltage and adjustable voltage application circuits need input and output capacitors to assure output voltage stability. Any desired output voltage from fixed voltage to 18V can be achieved by assigning proper values to two external resistors in its application circuitry (as shown in Fig.3, as R1, R2 are the two external resistors.).

BL8072 uses trimming technique to assure the accuracy of output value within  $\pm 2\%$ , at the same time, temperature compensation is elaborately considered in this chip, which makes BL8072's temperature coefficient within 100ppm/ $^{\circ}\text{C}$ .

## TYPICAL APPLICATION

BL8072 has fixed voltage and adjustable voltage application mode, Fig.4 shows their typical application circuitry.

A 1 $\mu\text{F}$  ceramic capacitor connected between input and GND as bypass capacitor and a 1 $\mu\text{F}$  ceramic capacitor between output and GND are recommended for all application.

Using a bypass capacitor ( $C_{\text{Adj}}$ ) between the adjust terminal and ground can improve ripple rejection. The bypass capacitor prevents ripple from being amplified in case the output voltage is increased. The impedance of  $C_{\text{Adj}}$  should be less than the resistance of  $R_1$  to prevent ripple from being amplified at any frequency. As  $R_1$  is normally in the range of 1K $\Omega$ ~10K $\Omega$ , the value of  $C_{\text{Adj}}$  should satisfy the following condition:

$$1/(2\pi * \text{Frequency}_{\text{Ripple}} * C_{\text{adj}}) < R_1$$

A 0.1 $\mu\text{F}$  ceramic capacitor is recommended.

Fig 3. Typical Application of BL8072

## EXPLANATION

The output voltage of adjustable application satisfies this followed equation:

$$V_{\text{out}} = V_{\text{Ref}} \times (1 + R_2/R_1) + I_{\text{Adj}} \times R_2$$

The second term  $I_{\text{Adj}} \times R_2$  can be ignored since the adjustable pin current  $I_{\text{Adj}}$  ( $\sim 2\mu\text{A}$ ) is much less than the current through  $R_1$  ( $\sim 1\text{mA}$ ).

The value of  $R_1$  is preferred in the range of 1K $\Omega$ ~10K $\Omega$  and the value of  $V_{\text{Ref}}$  is the output voltage of typical fixed voltage application circuit.
