

# BP1042 70 MHz SAW Filter

- Designed for CDMA Receiver IF Applications
- Simple External Impedance Matching
- Hermetic Metal DIP
- Unbalanced Input and Output
- Complies with Directive 2002/95/EC (RoHS)

See Associated Plots

| Suggested Matching Network Impedance at Port 1   | 375 nH in parallel with 310 Ω             |
| Suggested Matching Network Impedance at Port 2   | 240 nH in parallel with 320 Ω             |
| Case Style                                       | DIP14L-8 22.1 x 12.6 mm Nominal Footprint |
| Lid Symbolization (RR = run code, LL = lot code) | RFM BP1042 RLLL                           |

## Absolute Maximum Ratings

| Rating                                  | Value          | Units |
|---|----------------|-------|
| Maximum Incident Power in Passband      | +10            | dBm   |
| Max. DC voltage between any 2 terminals | 30             | VDC   |
| Storage Temperature Range               | -40 to +85     | °C    |
| Max Soldering Temperature               | 260°C for 30 s |       |
| Suitable for lead-free Soldering        |                |       |

## Electrical Connections (See note 3)

| Connection        | Terminals         |
|-------------------|-------------------|
| Port 1 Hot        | 7                 |
| Port 1 Gnd Return | 9                 |
| Port 2 Hot        | 14                |
| Port 2 Gnd Return | 2                 |
| No Connection     | 1, 8              |
| Case Ground       | 2, 9 & All others |

### Notes:

1. Unless noted otherwise, all specifications apply *over the operating temperature range* with filter soldered to the specified demonstration board with impedance matching to 50 Ω and measured with 50 Ω network analyzer.
2. Unless noted otherwise, all frequency specifications are referenced to the nominal center frequency, fc.
3. Rejection is measured as attenuation below the minimum IL point in the passband. Rejection in final user application is dependent on PCB layout and external impedance matching design. See Application Note No. 42 for details. All "NC" or "no connection pins should be grounded.
4. "LRIP" or "L" after the part number indicates "low rate initial production" and "ENG" or "E" indicates "engineering prototypes."
5. The design, manufacturing process, and specifications of this filter are subject to change.
6. Either Port 1 or Port 2 may be used for either input or output in the design. However, impedances and impedance matching may vary between Port 1 and Port 2, so that the filter must always be installed in one direction per the circuit design.
7. US and international patents may apply.

SCHEMATIC, BP1042 <DEMO>

1. DEVICE LEADS ARE TO BE SOLDERED DIRECTLY TO PCB. (NO PIN SOCKETS ARE USED)

# INSTRUCTIONS:

PLOTS: PLOTS A & B SHOW PLACE ON SMITH CHART WHERE DEVICE IS TO BE TUNED TO.  
PLOT #C IS TO BE DELIVERED WITH EACH DEMO.  
THE TUNING COMPONENT VALUES MAY VARY IN ORDER TO ACHIEVE PROPER TUNING  
DUE TO COMPONENT TOLERANCES. NOTE COMPONENT VALUES AND TOLERANCES ON EACH PLOT.
