Product Specification

1. General Description

The BR720D25 is a Color Active Matrix Liquid Crystal Display with an integral Light Emitting Diode (LED) backlight system. The matrix employs a-Si Thin Film Transistor as the active element.

It is a transmissive type display operating in the normally black mode. This TFT-LCD has a 72.07 inch diagonal measured active display area with WUXGA resolution(1080 vertical by 1920 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes.

Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot, thus, presenting a palette of more than 1.06Billion colors.

It is intended to support Public Display where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25 °C. The values specified are measured at an approximate distance 50cm from the LCD surface at a viewing angle 0 °.

[Figure 9] Optical characteristic measurement equipment and method

Table 6. Optical characteristics

Parameter	Symbol	Values			Units
		Min	Type	Max	
Contrast ratio	CR	900	1100	-	
Surface luminance, white	L_{wh}	2350	2500	-	cd/m ²
White luminance uniformity	ΔY	80	85	-	%
Response time	G to G	-	9	15	ms
Color Temperature			10000		K
Color Gamut(NTSC %)			72		%
Viewing angle (by CR >10)	x axis, right($\phi = 0^\circ$)	-	89	-	degree
	x axis, left ($\phi = 180^\circ$)	-	89	-	
	y axis, up ($\phi = 90^\circ$)	-	89	-	
	y axis, down ($\phi = 270^\circ$)	-	89	-	

Notes:

1. Contrast Ratio(CR) is defined mathematically as :

$$CR = \text{Surface Luminance at all white pixels} / \text{Surface Luminance at all black pixels}$$

It is measured at center 1-point.

2. Surface luminance is determined after the unit has been 'ON' and 1 Hour after lighting the backlight in a dark environment at $25 \pm 2^\circ$ C. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying L255 white.

3. The White luminance uniformity on LCD surface is then expressed as :

$$\Delta Y = (\text{Minimum Luminance of 9points} / \text{Maximum Luminance of 9points}) * 100$$
