FAST TURN-OFF THYRISTOR

Glass-passivated, eutectically bonded, fast turn-off thyristor in a TO-220AB envelope, intended for use in inverter, pulse and switching applications. Its characteristics make the device extremely suitable for use in regulator, vertical deflection, and east/west correction circuits of colour television receivers.

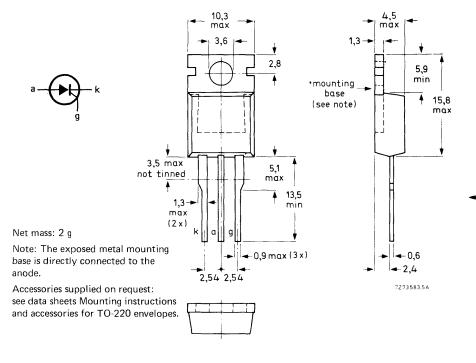

QUICK REFERENCE DATA

Repetitive peak off-state voltage	VDRM	max.	500 V
Average on-state current	IT(AV)	max.	4 A
R.M.S. on-state current	IT(RMS)	max.	6 A
Repetitive peak on-state current	ITRM	max.	30 A
Circuit-commutated turn-off time	tq	<	20 µs

MECHANICAL DATA

Fig. 1 TO-220AB.

Dimensions in mm

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Anode to cathode				
Non-repetitive peak voltages (t \leq 10 ms)	V _{DSM} /V _{RSM}	max.	550	V
Repetitive peak voltages	V _{DRM} /V _{RRM}	max.	500	V
Working voltages	V _{DW} /V _{RW}	max.	400	۷ *
Average on-state current (averaged over any 20 ms period) up to T_{mb} = 95 °C	IT(AV)	max.	4	А
R.M.S. on-state current	IT(RMS)	max.	6	А
Working peak on-state current	Iтwм	max.	10	A
Repetitive peak on-state current	TRM	max.	30	А
Non-repetitive peak on-state current; t = 10 ms; half sine-wave; $T_j = 110 ^{O}\text{C}$ prior to surge;				
with reapplied V _{RWMmax}	TSM	max.	40	
l ² t for fusing; t = 10 ms; T _j = 25 °C	l²t	max.	10	A ² s
Rate of rise of on-state current after triggering up to f = 20 kHz; V _{DM} = 300 V to I _{TM} = 6 A	dI _T /dt	max.	200	A∕µs
Gate to cathode				
Average power dissipation (averaged over any 20 ms period)	P _G (AV)	max.	1	w
Peak power dissipation; t = 10 μ s	P _{GM}	max.	25	W
Temperatures				
Storage temperature	T _{stg}	-40 to +	- 125	οС
Operating junction temperature	тј	max.	110	οC

* Voltage shapes as occurring in the intended application.

THERMAL RESISTANCE		
From junction to mounting base	R _{th} j-mb	= 1,5 °C/W
Transient thermal impedance; t = 1 ms	Z _{th j-mb}	= 0,2 °C/W
Influence of mounting method		
1. Heatsink mounted with clip (see mounting instructions)		
Thermal resistance from mounting base to heatsink		
a. with heatsink compound	R _{th mb-h}	= 0,3 °C/W
b. with heatsink compound and 0,06 mm maximum mica insulator	R _{th} mb-h	= 1,4 °C/W
c. with heatsink compound and 0,1 mm maximum mica insulator (56369)	R _{th} mb-h	= 2,2 °C/W
d. with heatsink compound and 0,25 mm max. alumina insulator (56367)	R _{th} mb-h	= 0,8 °C/W
e. without heatsink compound	R _{th mb-h}	= 1,4 °C/W
2. Free-air operation		

The quoted values of $R_{th}\ _{j\text{-}a}$ should be used only when no leads of other dissipating components run to the same tie-point.

Thermal resistance from junction to ambient in free air: mounted on a printed-circuit board at a = any lead length and with copper laminate

 $R_{th j-a} = 60 \text{ oC/W}$

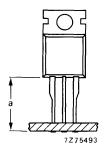

Fig. 2.

CHARACTERISTICS

Anode to	o cathode
----------	-----------

On-state voltage				
I _T = 10 A; T _j = 25 °C		۷T	<	2,5 V *
Rate of rise of off-state voltage that will not				
trigger any device; $T_j \le 110 \text{ °C}$		dV _D /dt	<	200 V/µs
Off-state current				
V _D = V _{DRMmax} ; T _j = 110 °C		D	<	1,5 mA 100 mA
Holding current; T _j = 25 ^o C		н	<	100 mA
Gate to cathode				
Voltage that will trigger all devices				
V _D = 6 V; T _j = 25 °C; t _p ≥ 5 μs		VGT	>	2,5 V
Current that will trigger all devices				
$V_D = 6 V; T_j = 25 \text{ °C}; t_p \ge 5 \mu s$		IGT	>	40 mA
Switching characteristics				
Circuit-commutated turn-off time (in regulatin when switched from $I_T = 6 A$ to $V_R \ge 50 V$ $-dI_T/dt = 10 A/\mu s; dV_D/dt = 200 V/\mu s; V_D$	with			

 $R_{GK} = 68 \ \Omega; \ T_{mb} = 80 \ ^{o}C; \ t_{p} \le 50 \ \mu s \qquad t_{q} < 20 \ \mu s$

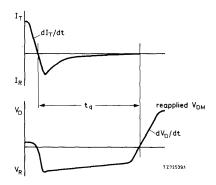

Fig. 3 Circuit-commutated turn-off time definition.

* Measured under pulse conditions to avoid excessive dissipation.

MOUNTING INSTRUCTIONS

- The device may be soldered directly into the circuit, but the maximum permissible temperature of the soldering iron or bath is 275 °C; it must not be in contact with the joint for more than 5 seconds. Soldered joints must be at least 4,7 mm from the seal.
- 2. The leads should not be bent less than 2,4 mm from the seal, and should be supported during bending.
- 3. It is recommended that the circuit connection be made to the anode tag, rather than direct to the heatsink.
- 4. Mounting by means of a spring clip is the best mounting method because it offers:
 - a. a good thermal contact under the crystal area and slightly lower $\,R_{th\ mb-h}$ values than screw mounting.

b. safe isolation for mains operation.

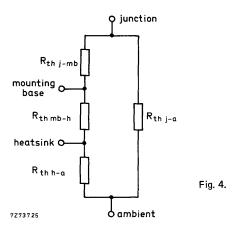

However, if a screw is used, it should be M3 cross-recess pan-head. Care should be taken to avoid damage to the plastic body.

- 5. For good thermal contact heatsink compound should be used between mounting base and heatsink. Values of R_{th mb-h} given for mounting with heatsink compound refer to the use of a metallic-oxide loaded compound. Ordinary silicone grease is not recommended.
- 6. The device should not be pop-rivetted to the heatsink. However, it is permissible to press-rivet providing that rivets of soft material are used, and the press forces are slowly and carefully controlled so as to avoid shock and deformation of either heatsink or mounting tab.

OPERATING NOTES

Dissipation and heatsink considerations:

a. The various components of junction temperature rise above ambient are illustrated in Fig. 4.

b. The method of using Fig. 5 is as follows:

Starting with the required current on the $I_{T(AV)}$ axis, trace upwards to meet the appropriate form factor curve. Trace right horizontally and upwards from the appropriate value on the T_{amb} scale. The intersection determines the $R_{th\ mb-a}$. The heatsink thermal resistance value ($R_{th\ h-a}$) can now be calculated from:

 $R_{th h-a} = R_{th mb-a} - R_{th mb-h}$

c. Any measurement of heatsink temperature should be made immediately adjacent to the device.

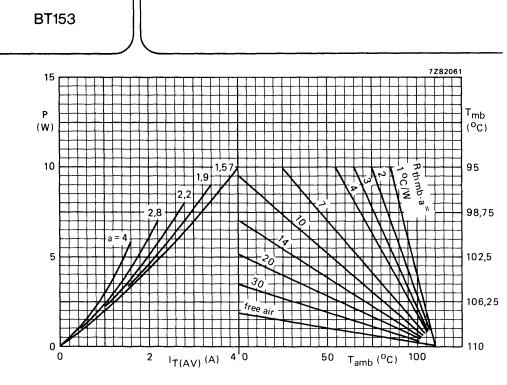

Fig. 5 The right-hand part shows the interrelationship between the power (derived from the left-hand part) and the maximum permissible temperatures.

α	а
300	4
600	2,8
900	2,2
1200	1,9
1800	1,57

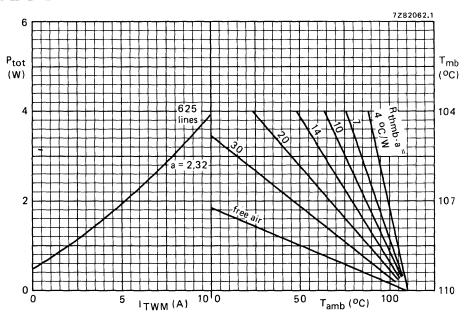

Fig. 6 The right-hand part shows the interrelationship between the power (derived from the left-hand part) and the maximum permissible temperatures.

Ptot = maximum power dissipation including gate and switching losses.

ITWM = maximum working peak on-state current.
