Bluetooth module

■ INTRODUCTION

Bluetooth wireless technology is a 2.4GHz ISM-band open industry standard for short range wireless communication, which is capable of voice and data transfer (up to 723 kbps data transfer in ACL link or up to 3 simultaneous voice connections in SCO links in a piconet).

In this document, the SEMCO-Bluetooth Modules are presented, which consists of RF, baseband, and link manager protocol together with Host Controller Interface(HCI) / HCI-UART functionality implemented according to the Bluetooth specification version 1.1.

SEMCO-Bluetooth Modules are designed for use as an universal Bluetooth module compliant for the Bluetooth specification version 1.1, which can be applied to hand-held phones, PDAs, headsets, PCs and PC-peripherals, et cetera for wireless voice and data communication.

SEMCO-Bluetooth Modules or Evaluation Board Demo Kits are available by Samsung Electro-Mechanics for development.

Further more detailed information on the SEMCO-Bluetooth v1.1 modules, are presented in this document below, or also available on our web site under <http://www.sem.samsung.com/bluetooth>
