Description:

(1) Manual soldering (We do not recommend this method strongly.)

- (1.1) To prevent cracking, please bake before manual soldering.
- (1.2) Temperature at tip of iron: 300°C Max.(25W)
- (1.3) It's banned to load any stress on the resin during soldering.
- (1.4) Soldering time: 3 sec. Max.(one time only)

(2) Reflow Soldering

- (2.1) When soldering, do not put stress on the LEDs during heating.
- (2.2) Never take next process until the component is cooled down to room temperature after reflow.
- (2.3) After soldering, do not warp the circuit board.
- (2.4) The recommended reflow soldering profile (measuring on the surface of the LED resin) is following:
