

# CA139, CA239, CA339 LM339, LM2901, LM3302

Quad Voltage Comparators for Industrial,  
Commercial and Military Applications

September 1993

### Features

- Operation from Single or Dual Supplies
- Common Mode Input Voltage Range to GND
- Output Voltage Compatible with TTL, DTL, ECL, MOS and CMOS
- Differential Input Voltage Range Equal to the Supply Voltage
- Maximum Input Offset Voltage ( $V_{IO}$ )
  - CA139A, CA239A, CA339A ..... 2mV
  - CA139, CA239, CA339 ..... 5mV
  - LM2901 ..... 7mV
  - LM3302 ..... 20mV
- Replacement for Industry Types 139, 239, 339, 139A, 239A, 339A, 2901, 3302

### Applications

- Square Wave Generator
- Time Delay Generators
- Pulse Generators
- Multivibrators
- High Voltage Digital Logic Gates
- A/D Converters
- MOS Clock Timers

### Description

The devices in this series consist of four independent single or dual supply voltage comparators on a single monolithic substrate. The common mode input voltage range includes ground even when operated from a single supply, and the low power supply current drain makes these comparators suitable for battery operation. These types were designed to directly interface with TTL and CMOS.

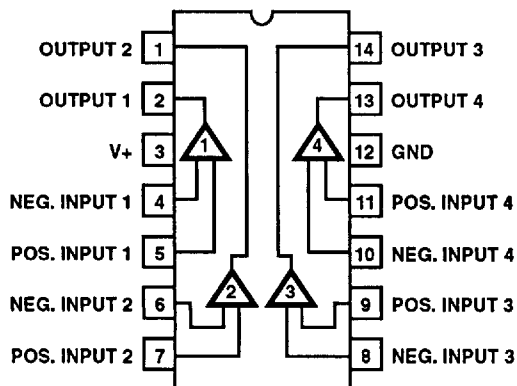

Types CA139A, CA239A, and CA339A have all the features and characteristics of their prototype counterparts CA139, CA239, and CA339 plus an even lower input offset voltage characteristic. All the SOIC parts are available on tape and reel. Replace the M suffix in the part number with M96 when ordering (e.g. CA0339AM96). The CA339 is also available in chip form (H suffix).

### Ordering Information

PART NUMBER	TEMPERATURE RANGE	PACKAGE
CA0139E, AE	-55°C to +125°C	14 Lead Plastic DIP
CA0139F, AF	-55°C to +125°C	14 Lead Ceramic DIP
CA0139M, AM	-55°C to +125°C	14 Lead SOIC
CA0239E, AE	-25°C to +85°C	14 Lead Plastic DIP
CA0239F, AF	-25°C to +85°C	14 Lead Ceramic DIP
CA0239M, AM	-25°C to +85°C	14 Lead SOIC
CA0339E, AE	0°C to +70°C	14 Lead Plastic DIP
CA0339F	0°C to +70°C	14 Lead Ceramic DIP
CA0339M, AM	0°C to +70°C	14 Lead SOIC
LM339N, AN	0°C to +70°C	14 Lead Plastic DIP
LM2901M	-40°C to +85°C	14 Lead SOIC
LM2901N	-40°C to +85°C	14 Lead Plastic DIP
LM3302M	-40°C to +85°C	14 Lead SOIC
LM3302N	-40°C to +85°C	14 Lead Plastic DIP

### Pinout

CA139, CA139A, CA239, CA239A, CA339 (PDIP, CDIP, SOIC)  
CA339A, LM2901, LM3302 (PDIP SOIC)

### Schematic Diagram

## Specifications CA139, CA139A, CA239, CA239A, CA339, CA339A, LM339, LM339A, LM2901, LM3302

## Absolute Maximum Ratings

Supply Voltage	36V or $\pm 18V$
Differential Input Voltage	36V
Input Voltage	-0.3V to +36V
Input Current ( $V_I < -0.3V$ ) Note 4	50mA
Output Short Circuit Duration (Single Supply) Note 5	Continuous
Junction Temperature	+175°C
Junction Temperature (Plastic Package)	+150°C
Lead Temperature (Soldering 10 Sec.)	+300°C

## Operating Conditions

Operating Temperature Range	-55°C to +125°C	
Storage Temperature Range	-65°C to +150°C	
Thermal Package Characteristics (°C/W)	$\theta_{JA}$	$\theta_{JC}$
Ceramic DIP Package	71	14
Plastic DIP Package	107	38
SOIC Package	119	36

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Electrical Specifications  $V_+ = 5V$ , Unless Otherwise Specified

PARAMETER	SYMBOL	CONDITION	LIMITS						UNITS	
			CA139			CA139A

Response Time (Figures 3 and 4)		$V_{RL} = 5V$ , $R_L = 5.1k\Omega$ , $T_A = +25^\circ C$		-	1.3	-	-	1.3	-	$\mu s$

## NOTES:

- Ambient Temperature ( $T_A$ ) applicable over operating temperature range as shown below.  
CA139, CA139A =  $-55^\circ C$  to  $+125^\circ C$ ; CA239, CA239A =  $-25^\circ C$  to  $+85^\circ C$ ; CA339, CA339A, LM339, LM339A =  $0^\circ C$  to  $+70^\circ C$ ; LM2901, LM3302 =  $-40^\circ C$  to  $+85^\circ C$ .
- The comparator will provide a proper output state even if the positive swing of the inputs exceeds the power supply voltage level, if the other input remains within the common mode voltage range. The low input voltage state must not be less than  $-0.3V$  (or  $0.3V$  below the magnitude of the negative power supply, if used).
- The upper end of the common mode voltage range is  $(V_+) - 1.5V$ , but either or both inputs can go to  $+30V$  without damage.
- Inputs must not go more negative than  $-0.3V$ .
- Short circuits from the output to  $V_+$  can cause excessive heating and eventual destruction. The maximum output current independent of  $V_+$  is approximately 20mA.
