CMOS 4-Stage Parallel In/Parallel Out Shift Register

with J-K Serial Inputs and True/ Complement Outputs

Features:

- 4-Stage clocked shift operation
- Synchronous parallel entry on all 4 stages
- J$\overline{K}$ inputs on first stage
- Asynchronous True/Complement control on all outputs
- Static flip-flop operation; Master-slave configuration
- Reset control
- Buffered outputs
- Low power dissipation — 5μW typ. (ceramic)
- High speed — to 5 MHz
- Quiescent current specified to 15 V
- Maximum input leakage current of 1μA at 15 V (full package-temperature range)
- 1-V noise margin (full package-temperature range)

The RCA-CD4035A is a four-stage clocked signal serial register with provision for SYNCHRONOUS PARALLEL inputs to each stage and SERIAL inputs to the first stage via J$\overline{K}$ logic. Register stages 2, 3, and 4 are coupled in a serial D flip-flop configuration when the register is in the serial mode (PARALLEL/SERIAL control low).

Parallel entry via the D line of each register stage is permitted only when the PARALLEL/SERIAL control is high.

In the parallel or serial mode information is transferred on positive clock transitions.

When the TRUE/COMPLEMENT control is high, the TRUE contents of the register are available at the output terminals. When the TRUE/COMPLEMENT control is low, the outputs are the complements of the data in the register. The TRUE/COMPLEMENT control functions asynchronously with respect to the CLOCK signal.

J$\overline{K}$ input logic is provided on the first stage SERIAL input to minimize logic requirements particularly in counting and sequence-generation applications. With J$\overline{K}$ inputs connected together, the first stage becomes a D flip-flop. An asynchronous common RESET is also provided.

These types are supplied in 16-lead hermetic dual-in-line ceramic packages (D and F suffixes), 16-lead dual-in-line plastic package (E suffix), 16-lead ceramic flat packages (K suffix), and in chip form (H suffix).

Applications

- **Counters, Registers**
  - Arithmetic-unit registers
  - Shift left — shift right registers
  - Serial-to-parallel/parallel-to-serial conversions
- **Sequence generation**
- **Control circuits**
- **Code conversion**
