

5.8- 8.5GHz Power Amplifier

GaAs Monolithic Microwave IC in SMD leadless package

Description

The CHA6552-QJG is a three stage monolithic GaAs high power circuit producing 4 Watt output power.

It is designed for Point to Point radio and commercial communication systems. The circuit is manufactured with a pHEMT process, 0.5µm gate length.

It is supplied in RoHS compliant SMD package.

Main Features

- Broadband performances: 5.8- 8.5GHz
- 36dBm saturated power
- 35dBm at 1dB compression
- 22dB gain
- DC bias: $V_d = 7.0\text{V}$ @ $I_d = 1.8\text{A}$
- QFN6x6
- MSL3

Device thermal performances

All the figures given in this section are obtained assuming that the QFN device is cooled down only by conduction through the package thermal pad (no convection mode considered). The temperature is monitored at the package back-side interface (Tcase) as shown below.

The system maximum temperature must be adjusted in order to guarantee that Tcase remains below the maximum value specified in the next table. So, the system PCB must be designed to comply with this requirement.

A derating must be applied on the dissipated power if the Tcase temperature can not be maintained below the maximum temperature specified (see the curve Pdiss. Max) in order to guarantee the nominal device life time (MTTF).

DEVICE THERMAL SPECIFICATION : CHA6552-QJG

Recommended max. junction temperature (Tj max)	:	169 °C
Junction temperature absolute maximum rating	:	175 °C
Max. continuous dissipated power (Pdiss. Max.)	:	12.6 W
=> Pdiss. Max. derating above Tcase ⁽¹⁾ = 85 °C	:	149 mW/°C
Junction-Case thermal resistance (Rth J-C) ⁽²⁾	:	<6 °C/W
Minimum Tcase operating temperature ⁽³⁾	:	-40 °C
Maximum Tcase operating temperature ⁽³⁾	:	85 °C
Minimum storage temperature	:	-55 °C
Maximum storage temperature	:	150 °C

(1) Derating at junction temperature constant = Tj max.

(2) Rth J-C is calculated for a worst case considering the **hottest junction** of the MMIC and all the devices biased.

(3) Tcase=Package back side temperature measured under the die-attach-pad (see the drawing below).

⁽¹⁾ The package outline drawing included to this data-sheet is given for indication. Refer to the application note AN0017 (<http://www.ums-gaas.com>) for exact package dimensions.

⁽²⁾ It is strongly recommended to ground all pins marked "Gnd" through the PCB board. Ensure that the PCB board is designed to provide the best possible ground to the package.

Evaluation mother board

- Compatible with the proposed footprint.
- Based on typically Ro4350 / 10mils or equivalent.
- Using a micro-strip to coplanar transition to access the package.
- Recommended for the implementation of this product on a module board.
- Decoupling capacitors of 100pF $\pm 5\%$, 10nF $\pm 10\%$ and 1 μ F $\pm 10\%$ are recommended for all DC accesses.
- A 10K Ω resistor is recommended on VREF & VDET accesses for the detector
- See application note AN0017 for details.

Notes

Due to ESD protection circuits on RF input, an external capacitance might be requested to isolate the product from the external voltage that could be present on the RF access.

The DC connections do not include any decoupling capacitor in package, therefore it is mandatory to provide a good external DC decoupling (100pF, 10nF, 1μF) on the PC board, as close as possible to the package.

A 10KΩ resistor is recommended in parallel to VDET, and VREF accesses.

Please note that it is not mandatory to use both detectors, on north and south sides.

If only one detector is used, the unused pads VDET, VREF and VDC could be unconnected or grounded.

Notes

Recommended package footprint

Refer to the application note AN0017 available at <http://www.ums-gaas.com> for package footprint recommendations.

SMD mounting procedure

For the mounting process standard techniques involving solder paste and a suitable reflow process can be used. For further details, see application note AN0017.

Recommended environmental management

UMS products are compliant with the regulation in particular with the directives RoHS N°2011/65 and REACH N°1907/2006. More environmental data are available in the application note AN0019 also available at <http://www.ums-gaas.com>.

Recommended ESD management

Refer to the application note AN0020 available at <http://www.ums-gaas.com> for ESD sensitivity and handling recommendations for the UMS package products.
