

### GENERAL DESCRIPTION

The CM2838 family is a positive voltage linear regulator developed utilizing CMOS technology featured low quiescent current (30 $\mu$ A typ.), low dropout voltage, and high output voltage accuracy, making them ideal for battery applications. EN input connected to CMOS has low bias current. The space-saving SOT-23-5 package is attractive for "Pocket" and "Hand Held" applications.

These rugged devices have both Thermal Shutdown, and Current limit to prevent device failure under the "Worst" of operating conditions.

In application requiring a low noise, regulated supply, place a 1000pF capacitor between Bypass and Ground.

The CM2838 is stable with a Low ESR output capacitance of 1.0 $\mu$ F or greater.

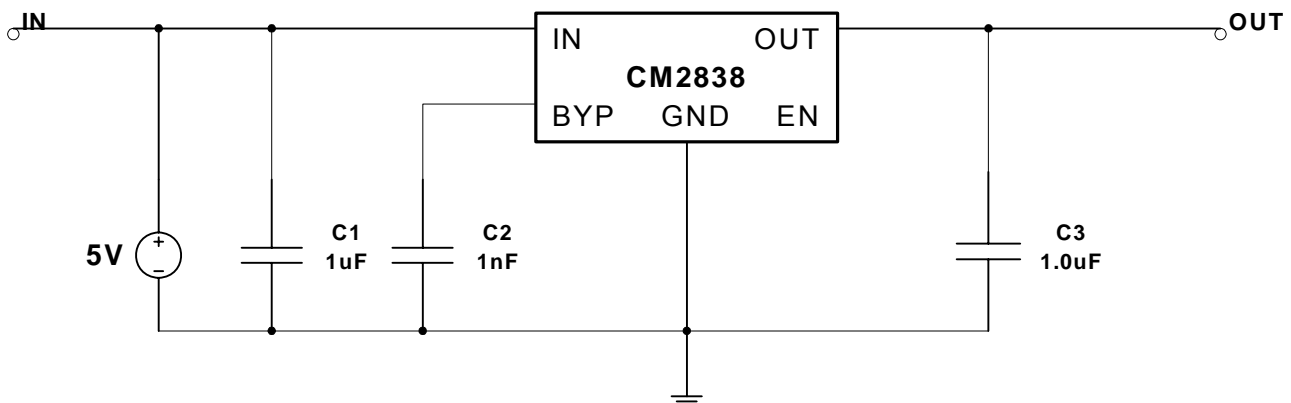

### FEATURES

- ◆ Very Low Dropout Voltage
- ◆ Low Current Consumption: Typ. 30 $\mu$ A, Max. 35 $\mu$ A
- ◆ Output Voltage: 1.8V, 2.5V, 2.8V, 3.0V, and 3.3V
- ◆ High Accuracy Output Voltage: +/- 1.5%
- ◆ Guaranteed 300mA Output
- ◆ Input Range up to 7.0V
- ◆ Thermal Shutdown
- ◆ Current Limiting
- ◆ Stability with Low ESR Capacitors
- ◆ Compact Package: SOT-23-5
- ◆ Factory Pre-set Output Voltages
- ◆ Low Temperature Coefficient

### APPLICATIONS

- ◆ Battery-powered devices
- ◆ Personal communication devices
- ◆ Home electric/electronic appliances
- ◆ PC peripherals

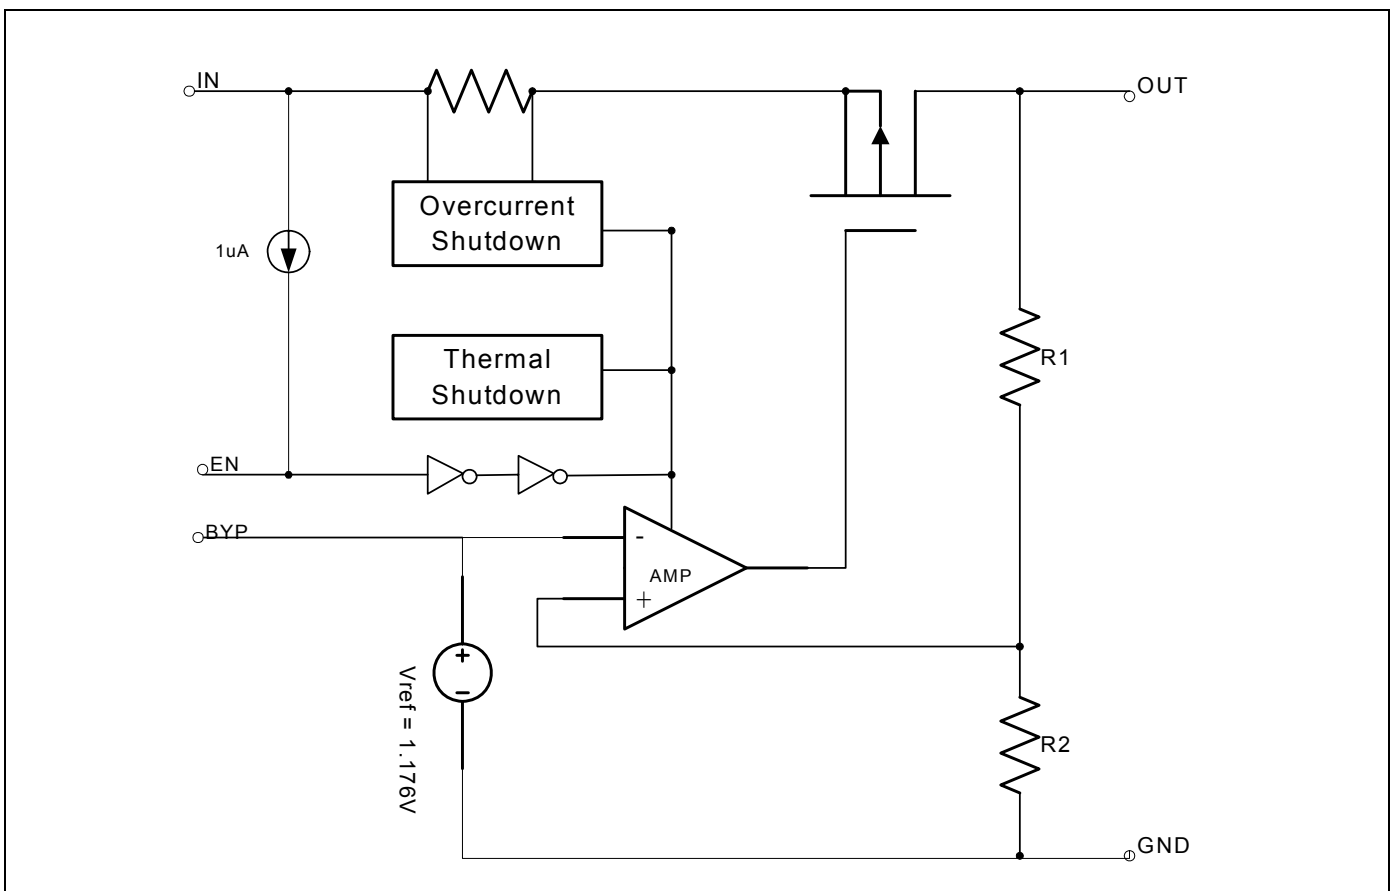

### TYPICAL APPLICATIONS

### PIN CONFIGURATION

### BLOCK DIAGRAM

**ORDERING INFORMATION**

| Part Number  | Output Voltage | Temperature Range | Package  |
|--------------|----------------|-------------------|----------|
| CM2838DIM25  | 1.8V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838KIM25  | 2.5V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838NIM25  | 2.8V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838PIM25  | 3.0V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838SIM25  | 3.3V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838GDIM25 | 1.8V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838GKIM25 | 2.5V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838GNIM25 | 2.8V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838GPIM25 | 3.0V           | -40°C ~ +85°C     | SOT-23-5 |
| CM2838GSIM25 | 3.3V           | -40°C ~ +85°C     | SOT-23-5 |

Note: For other pre-set output voltage requirements, please contact Champion Sales office.

**ABSOLUTE MAXIMUM RATINGS**

Input Voltage ..... +7V  
Output Current .....  $P_D / (V_{IN} - V_o)$  mA  
Output Voltage ..... GND-0.3V to  $V_{IN}+0.3V$   
ESD Classification ..... B

**OPERATING RATINGS**

Ambient Temperature Range ( $T_A$ ) ..... -40°C to +85°C  
Junction Temperature Range ..... -40°C to +150°C

**THERMAL INFORMATION**

| Parameter  |          | Maximum | Unit |
|--|----------|---------|------|
| Thermal Resistance ( $\Theta_{jc}$ )                                 | SOT-23-5 | 160     | °C/W |
| Internal Power Dissipation ( $P_D$ )<br>( $\Delta T = 100^\circ C$ ) | SOT-23-5 | 250     | mW   |
| Maximum Junction Temperature   |          | 150     | °C   |
| Maximum Lead Temperature (10 Sec)                                    |          | 300     | °C   |

Caution: Stress above the listed absolute rating may cause permanent damage to the device.

## DETAILED DESCRIPTION

The CM2838 family of CMOS regulators contain a PMOS pass transistor, voltage reference, error amplifier, over-current protection, thermal shutdown.

The P-channel pass transistor receives data from the error amplifier, over-current protection, and thermal protection circuits. During normal operation, the error amplifier compares the output voltage to a precision reference. Over-current and Thermal shutdown circuits become active when the junction temperature exceeds 150°C, or the current exceeds 300mA. During thermal shutdown, the output voltage remains low. Normal operation is restored when the junction temperature drops below 120°C.

The CM2838 switches from voltage mode to current mode when the load exceeds the rated output current. This prevents over-stress.

## ENABLE

The Enable pin normally floats high. When actively, pulled low, the PMOS pass transistor shut off, and all internal circuits are powered down. In this state, the quiescent current is less than 2 $\mu$ A. This pin behaves much like an electronic switch.

## EXTERNAL CAPACITOR

The CM2838 is stable with a Low ESR output capacitor to ground of 1.0 $\mu$ F or greater. It can keep stable even with higher ESR capacitors. A second capacitor is recommended between the input and ground to stabilize VIN. The input capacitor should be larger than 0.1 $\mu$ F to have a beneficial effect. All capacitors should be placed in close proximity to the pins. A “quiet” ground termination is desirable.

## IMPORTANT NOTICE

Champion Microelectronic Corporation (CMC) reserves the right to make changes to its products or to discontinue any integrated circuit product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

A few applications using integrated circuit products may involve potential risks of death, personal injury, or severe property or environmental damage. CMC integrated circuit products are not designed, intended, authorized, or warranted to be suitable for use in life-support applications, devices or systems or other critical applications. Use of CMC products in such applications is understood to be fully at the risk of the customer. In order to minimize risks associated with the customer's applications, the customer should provide adequate design and operating safeguards.
