

CNA1003H

Photo Interrupter

For contactless SW, object detection

Outline

CNA1003H is a transmissive photosensor in which a high efficiency GaAs infrared light emitting diode is used as the light emitting element, and a high sensitivity phototransistor is used as the light detecting element. The two elements are arranged so as to face each other, and objects passing between them are detected.

Features

- Highly precise position detection : 0.3 mm
- Gap width : 5 mm
- With printed wiring board (PWB) positioning pins
