

Description

CRM60GH30E4 are 3-phase Integrated Power Modules (IPM) designed for advanced appliance motor drive applications such as refrigerator compressor and pumps.

CRM60GH30E4 Integrated 6 low-loss IGBTs and FRDs, 3-phase full bridge drivers in a familiar package. The modules are optimized for low EMI characteristics.

Features

- 600V/30A three-phase inverter
- Works with 3.3V/5V MCU
- Integrated under-voltage protection
- Integrated high accurate short-circuit current protection
- Integrated >40 μ s fault duration time
- Integrated built-in temperature-sensing
- Integrated over temperature protection
- Integrated bootstrap diodes with current limiting
- Isolation rating: 1500 Vrms/min

DIP-24B

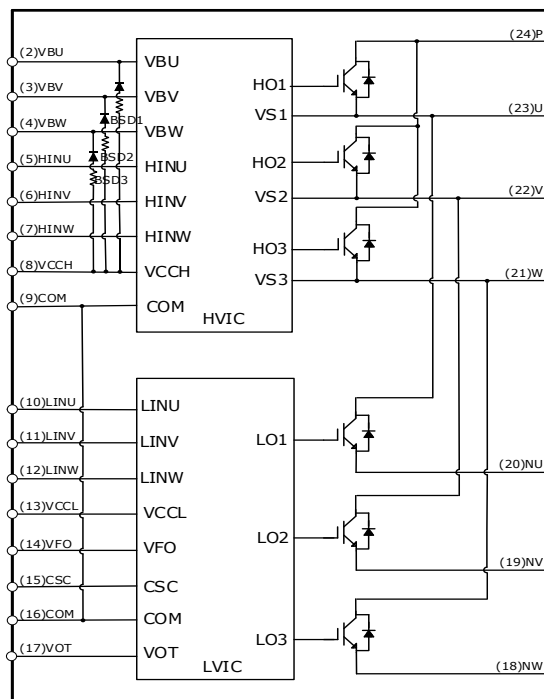

Applications

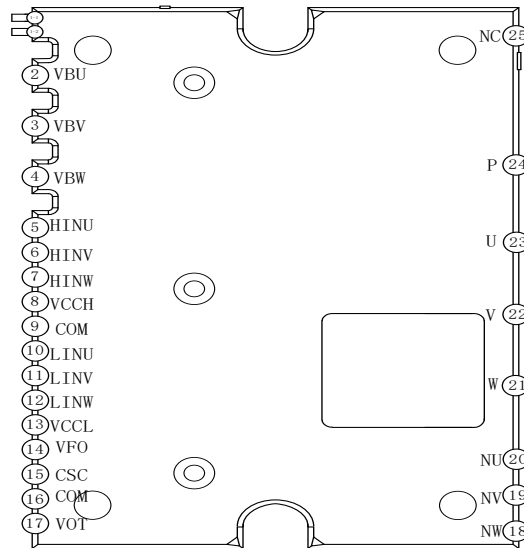

- Refrigerator compressor
- Air condition compressor
- Low-power inverters
- Pumps

23	U	Output - Phase U, High Side Floating Supply Offset U
24	P	DC Bus Voltage Positive
25	NC	Not Connected

Application Circuit

Remark:

- 1、 To prevent malfunction, the wiring of each input should be as short as possible.
- 2、 Input drive is High-Active type. There is a $5k\Omega$ (typ.) pull-down resistor integrated in the IC input circuit. And adding RC filter circuit to the input will prevent the surge noise caused by incorrect input.
- 3、 To prevent surge damage, it is recommended to add a high-frequency non-inductive flat capacitor (0.1uF to 0.22uF) between P and N. The cable connection of the capacitor should be as short as possible.
- 4、 The line between the current detection resistor and the IPM should be as short as possible, otherwise the large surge voltage generated by the connecting inductor may cause damage.
- 5、 All capacitors should be mounted as close to the terminals of the IPM as possible.
- 6、 FO output is open drain type. It should be pulled up to the positive side of 5V power supply by a resistor of about $10k\Omega$.
- 7、 The time constant R_{sc} and C_{sc} of the protection circuit should be selected in the range of 1.5-2.0 μs .
