

# CT 3232M

## Low Power Driver / Receiver

### For MIL-STD-1553 & Macair

#### Features

- 1.5 Watt Total Hybrid Dissipation at 25% Transmitting Duty Cycle
- Monolithic Design
- Compatible with MIL-STD-1553A/B & Macair A3818, A5232, A5690 & A4905
- Meets MIL-STD-1553B
- TTL Compatible
- Full Military (-55°C to +125°C) Temperature Range
- Driver / Receiver in a single Package for Space & Weight Savings
- Filtering on Receiver to Improve S/N Ratio of System
- Pin for Pin interchangeable with CT3231 Series
- Packaging – Hermetic Metal Plug-In or Flat Package
  - 24 Lead, 1.27" sq. max x .2" Ht Flat package
  - 24 Pin, 1.27" sq. max x .175" Ht Plug-In package

#### DRIVER DESCRIPTION

The CT3232 Driver section accepts complementary TTL Data at the input, and produces a 30 Volt nominal peak-to-peak differential signal across a 140Ω load at the output. When coupled to the Data Bus with a 1:1 transformer, isolated on the Data Bus side with two 55.0Ω fault isolation resistors, and loaded by two 70Ω terminations plus additional receivers, the Data Bus signal produced is 7.2 Volts nominal peak-to-peak.

When both "DATA" and " $\overline{\text{DATA}}$ " inputs are held low or both are held high, the driver output becomes a high impedance and is "removed" from the line. In addition, an overriding "INHIBIT" input provides for removal of the Driver output from the line. A logic "1" applied to the "INHIBIT" takes priority over the condition of the data inputs and disables the Driver. See Driver Logic Waveforms, Figure 3.

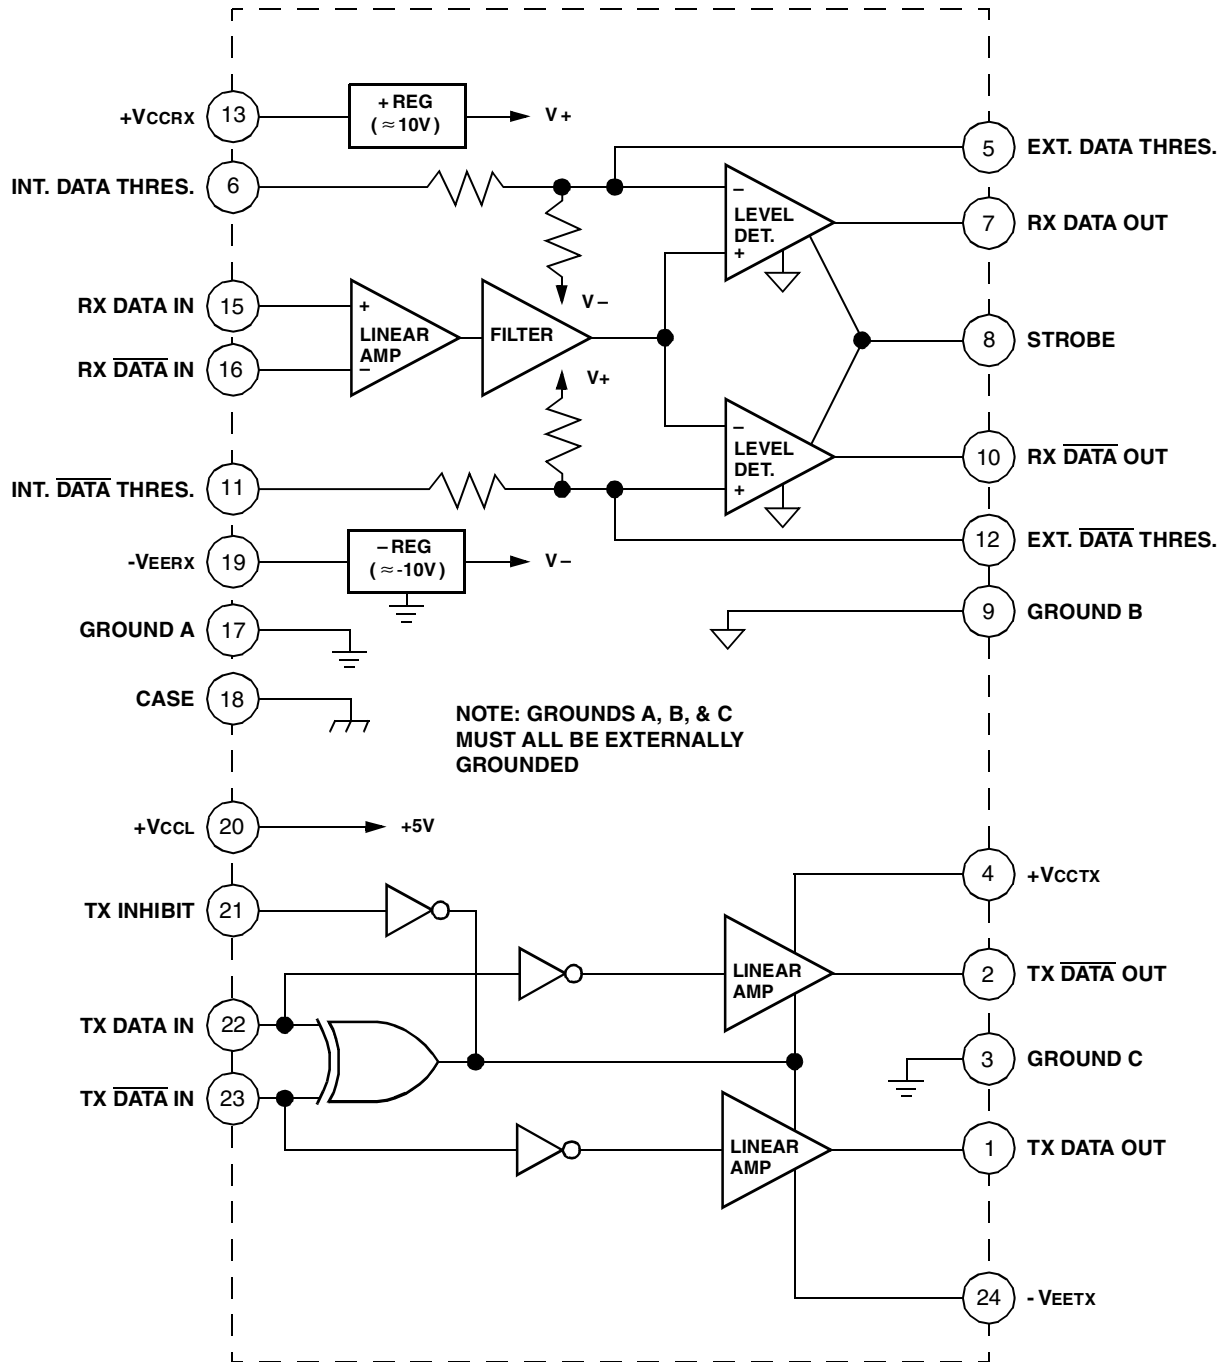

DATA and  $\overline{\text{DATA}}$  inputs must be complementary waveforms, of 50% duty cycle average, with no gate delays between them.

#### RECEIVER DESCRIPTION

The CT3232 Receiver section accepts Bi-Phase Differential data at the input and produces two TTL signals at the output. The outputs are "DATA" and " $\overline{\text{DATA}}$ ", and represent positive and negative excursions (respectively) of the input beyond a predetermined threshold. See Receiver Logic Waveforms, Figure 2.

The positive and negative thresholds may be internally set by grounding the appropriate pins, or externally set with resistors. The pre-set internal thresholds will detect Data Bus signals exceeding 1Volt p-p and ignore signals less than 0.5Volt p-p when used with 1:1 transformer (See Figure 4 for a suitable transformer and typical connection).

A low level at the STROBE input inhibits the DATA and  $\overline{\text{DATA}}$  outputs. If unused, a 2KΩ pull-up to +5V is recommended.

**Figure 1 – CT3232 Functional Block Diagram and Pinouts**

## Absolute Maximum Ratings

Parameter	Range	Units
Supply Voltage, Pin 4 or 13	-0.3 to +18.0	Volts
Supply Voltage, Pin 24 or 19	0.3 to -18.0	Volts
Supply Voltage, Pin 20	-0.3 to + 7.0	Volts
Logic Input Voltage, Pin 8, 21, 22, or 23	-0.3 to +5.5V	Volts
Receiver Differential Input, Pin 15 to Pin 16	±20 (40 Vp-p)	Volts
Receiver Input Voltage, Pin 15 or Pin 16	±15	Volts
Driver Peak Output Current, Pin 1 or Pin 2	±300	mA
Total Package Power Dissipation at (Ambient) TA = + 25°C (Derate above TA = + 25°C at 40 mW/°C)	4.0 (Note 1)	Watts
Power Dissipation at Specified Case Temperatures	See Figure 5	
Operating Case Temperature Range (Tc) (See Figure 5 for limitations)	-55 to +125	°C

## Electrical Characteristics

	tDTX	-	220	350	ns	

Note 2: Maximum supply currents for driver and receiver combined are included in power and thermal data table.

## Electrical Characteristics con't

Parameter / Condition	Sym	Min	Typ	Max	Unit	
Total Supply Current, "Standby" mode or transmitting at less than 1% duty cycle (e.g. 20µS of transmission every 2mS or longer interval)	ICCS	-	40	50	mA	
	IEES	-	30	40	mA	
	ICCL	-	35	45	mA	
Total Supply Current transmitting at 1MHz into a 35Ω load at point A in Figure 4  (ICCL limits do not change with mode of operation or duty cycle)	Duty Cycle	ICC25	Note 4	70	80	mA
	25%	IEE25	Note 4	65	75	mA
	100%	ICC100	Note 4	175	190	mA
Power Dissipation of most critical (hottest) device in hybrid during continuous transmission (100% duty cycle)	Supply Voltage					
	±12V ±15V	PC12 PC15	Note 3 Note 3	300 450	400 600	mA mA
Thermal Resistance, junction-to-case, of most critical device	ØJC	-	80	100	°C/W	
Allowable transmitting duty cycle when case is held to +100°C maximum	Note 5	-	-	100	%	
Allowable transmitting duty cycle when case is held to +125°C maximum	Supply Voltage					
	±12V ±15V	Note 5 Note 5	- -	- -	80 55	% %

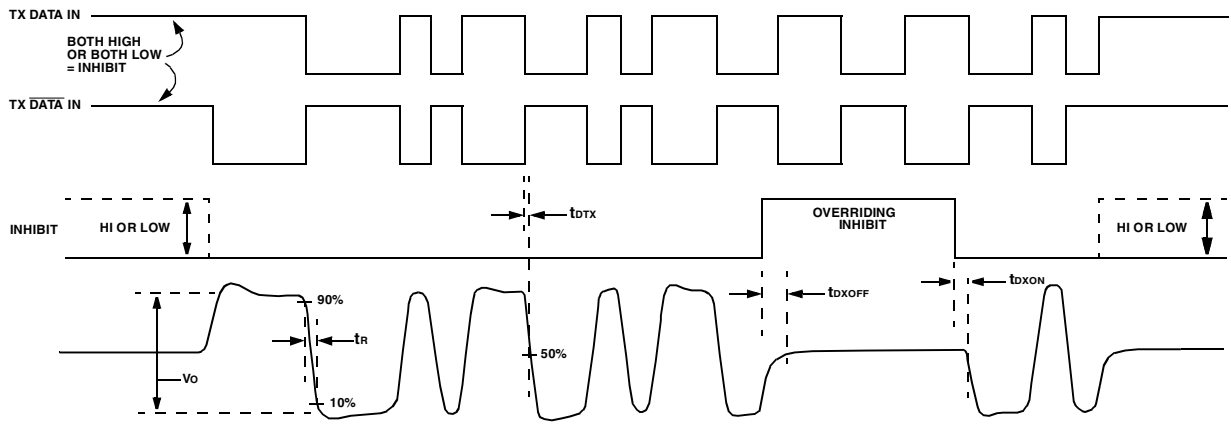

Note 3: Decreases linearly to zero at zero duty cycle.

Note 4: Decreases linearly to applicable "Standby" value at zero duty cycle.

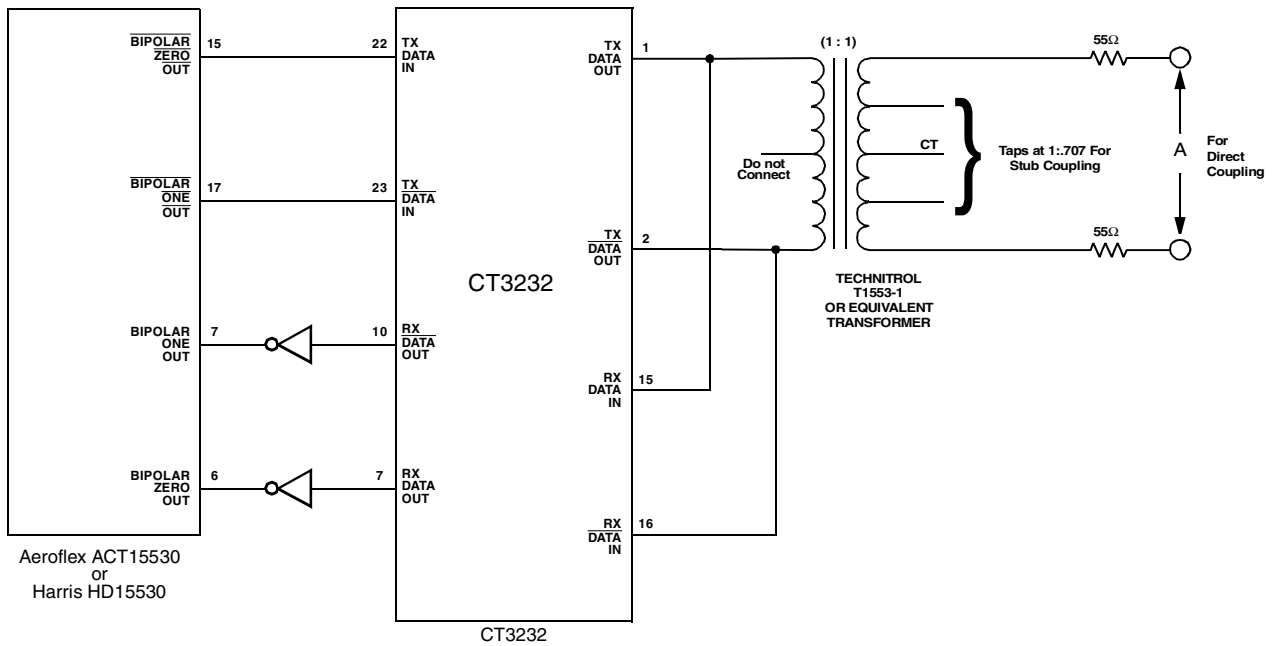

Note 5: Based upon operating junction temperature of 160°C for hottest device. For lower operating junction temperatures, reduce maximum duty cycle accordingly.

**Figure 2 – Receiver Logic Waveforms**

**Figure 3 – Driver Logic Waveforms**

**Figure 4 – Typical Input/Output Connections**

$$\% \text{ Duty Cycle} = \frac{\text{Transmit Time}}{\text{Transmit \& Receive Time}} \times 100$$

**Note: Case Temperature must be held to +100°C Maximum for 100% Duty Cycle. For Operation at Case Temperature of +125°C, See "Power and Thermal Data".**

**Figure 5 – Typical Power Dissipation (Total Hybrid)**

Notes: 1. Dimensions shown are in inches.  
2. Pins are equally spaced at  $.100 \pm .002$  tolerance non-cumulative each row.
