

# **Free Mount Cylinder**

A space-saving air cylinder with multiple surfaces capable of mounting directly. Offered in rich variations.

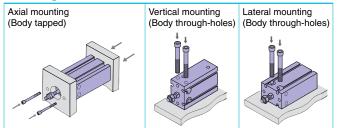

### **Space-saving**

The multiple surface direct mounting with a square body and no brackets allows the freedom of the mounting surface. This enables space-saving designs for equipment.

### **Auto Switch Capable**

#### Mounting

### **Series Variations**

Series Variations				
Series	Action	Rod	Bore size(mm)	Page
Standard Series CU	Double acting	Single rod Double rod		2 8
	Single acting	Single rod (Retracted/Extended)		13
Non-rotating	Double acting	Single rod		21

#### **Precautions on Free Mount**

#### 1. Operating speed

Make sure to connect a speed controller to the cylinder and adjust its speed to 500 mm/s or less.

If a load is to be attached to the end of the rod, adjust the speed to the maximum speed shown in Graph (1) or less, in accordance with the added mass. Graph (1) Load Weight and Maximum Speed

### How to read the graph

• Using the CU10 to drive a load weighing 2.5 kg: From the vertical axis in the graph on the left, extend the horizontally from 2.5 kg., and drop down from the point at which it intersects with the tube bore ø10. The maximum speed will be 141 mm/s.

(N)

(N)

(N)

(N)

#### 2. Rod end allowable lateral load

Make sure that the lateral load that is applied to the rod end will be no more than the values shown in the tables.

The tables show the value for a single rod. For double rods, please contact SMC.

## Series CU

#### JIS Symbol Double acting, Single rod

.

Made to Order	Made to Order Specifications (For details, refer to P.43.)
Symbol	Specifications
-XB6	Heat resistant (150°C)

-XB7	Cold resistant (-40°C)
-XB9	Low speed (10 to 50 mm/s)
-XB13	Low speed (5 to 50 mm/s)
-XC19	Intermediate stroke (with a spacer built-in)
-XC22	Seals made of fluorine rubber

Refer to "Pneumatic Clean Series" catalog for clean room specifications.

### **Tightening Torque**

When mounting Series CU, refer to the below table.							
Bore size (mm)	Hexagon socket head cap screw dia. (mm)	Proper tightening torque (N·m)					
6, 10	M3	1.08 ±10%					
16	M4	2.45 ±10%					
20, 25	M5	5.10 ±10%					
32	M6	8.04 ±10%					

Bore size (mm)	6	10	16	20	25	3

### Proper Auto Switch Mounting Position (Detection at stroke end) and Its Mounting Height

D-A9□ D-M9□ D-F9□W

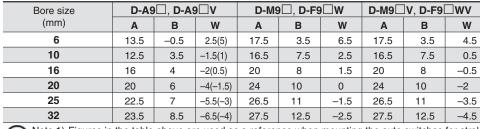

(): Denotes the values of D-A93.

D-A9□V D-M9□V D-F9□WV

(): Denotes the values of D-M9 V, D-F9 WV.

### CDU Double Acting, Single Rod

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 2) Negative figures in the table W indicate an auto switch is mounted inward from the edge of the cylinder body.

Note 3) In the case of the 5 stroke or the 10 stroke, there are times in which the switch will not turn OFF or 2 switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 switches are used, make sure that both switches turn ON).

Note 4) () in column W is the dimensions of D-A93.

### **Operating Range**

Auto switch model	Bore size (mm)										
Auto Switch model	6	10	16	20	25	32					
D-A9□/A9□V	5	6	9	11	12.5	14					
D-M9□/M9□V	2.5	2.5	3.5	5	5	5					
D-F9□W/F9□WV	3	3.5	5.5	6.5	7	7					

 $\ast$  Since this is a guideline including hysteresis, not meant to be guaranteed. (assuming approximately  $\pm 30\%$  dispersion.)

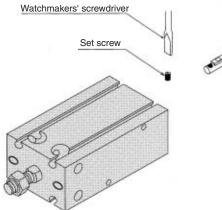

There may be the case it will vary substantially depending on an ambient environment.

## Series CU

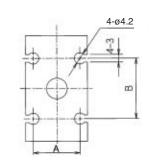

### **Mounting of Auto Switch**

### D-A9<sup>\_</sup>/M9<sup>\_</sup>/A9<sup>\_</sup>V/M9<sup>\_</sup>V/F9<sup>\_</sup>W/F9<sup>\_</sup>WV

- When tightening an auto switch mounting screw, use a watchmakers' screwdriver with a grip diameter of 5 to 6 mm.
- Use a tightening torque of approximately 0.10 to 0.20 N·m.

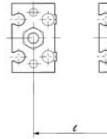

### **Auto Switch Groove**

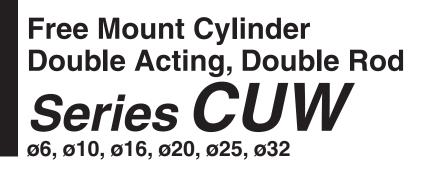

Bore size (mm)	Α	В
6	8.2	9
10	10.3	13
16	15	18
20	21	23
25	27	25
32	35	27

### **Caution on Proximity Installation**

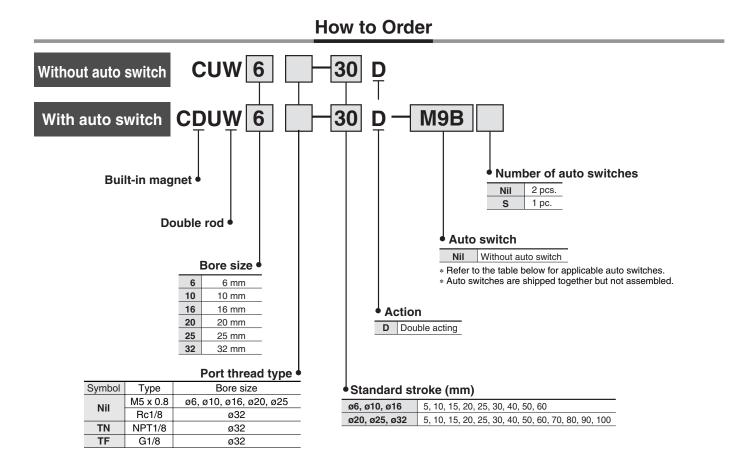

When free mounting cylinders equipped with auto switches are used, the auto switches could activate unintentionally if the installed distance is less than the dimensions shown in the table. Therefore, make sure to provide a greater clearance. Due to unavoidable circumstances, if they must be used with less distance than the dimensions given in the table, the cylinders must be shielded. Therefore, affix a steel plate or a magnetic shield plate (MU-S025) to the area on the cylinder that corresponds to the adjacent auto switch. (Please contact SMC for details.) Auto switches may malfunction if a shield plate is not used.

Bore size (mm)	Mounting pitch $\ell$ (mm)
6	18
10	20
16	33
20	40
25	46
32	56

 $\bigcirc$ 

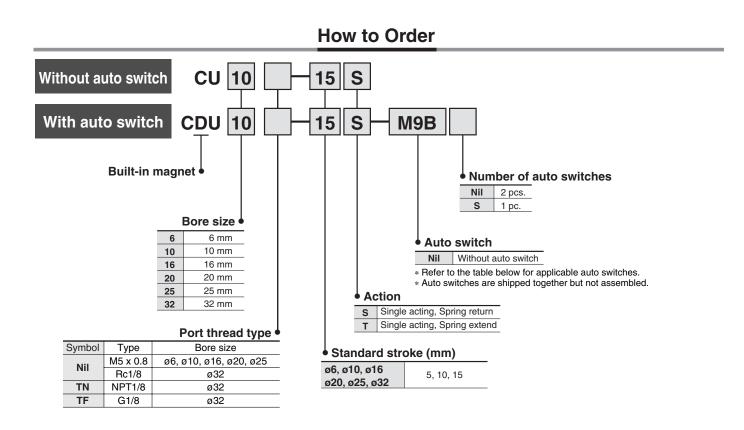

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 2) Negative figures in the table W indicate an auto switch is mounted inward from the edge of the cylinder body.

Note 3) In the case of the 5 stroke or the 10 stroke, there are times in which the switch will not turn OFF or 2 switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 switches are used, make sure that both switches turn ON).

Note 4) () in column W is the dimensions of D-A93.

## Series CU

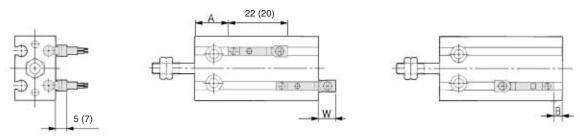

### Proper Auto Switch Mounting Position and Its Mounting Height: Single Acting, Spring Return

D-A9□ D-M9□ D-F9□W

(): Denotes the values of D-A93.

D-A9□V D-M9□V D-F9□WV

(): Denotes the values of D-M9 V, D-F9 WV.

### Single Acting, Spring Return

Bore size	Otralia	D-A9	9□, D-A	9□V	D-M	9□, D-F	9□W	D-M9	<b>□V, D-F</b>	9□WV
(mm)	Stroke	Α	В	W	Α	В	W	Α	В	W
6	All stroke	13.5	0	2.5(5)	17.5	4	6.5	17.5	4	4.5
10	<u>5, 10</u> 15	12.5 17.5	3.5	-1.5(1)	16.5 21.5	7.5	2.5	16.5 21.5	7.5	0.5
16	<u>5, 10</u> 15	16 21	4	-2(0.5)	20 25	8	2	20 25	8	-0.5
20	<u>5, 10</u> 15	20 25	6	-4(-1.5)	24 29	10	0	24 29	10	-2
25	<u>5, 10</u> 15	22.5 27.5	7	-5.5(-3)	26.5 31.5	11	-1.5	26.5 31.5	11	-3.5
32	<u>5, 10</u> 15	23.5 28.5	8.5	-6.5(-4)	27.5 32.5	12.5	-2.5	27.5 32.5	12.5	-4.5

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

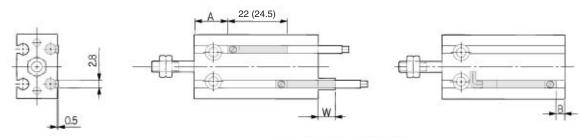

Note 2) Negative figures in the table W indicate an auto switch is mounted inward from the edge of the cylinder body.

Note 3) In the case of the 5 stroke or the 10 stroke, there are times in which the switch will not turn OFF or 2 switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 switches are used, make sure that both switches turn ON).

Note 4) () in column W is the dimensions of D-A93.

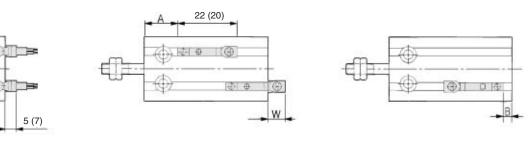

### Proper Auto Switch Mounting Position and Its Mounting Height: Single Acting, Spring Extend

\* Normally closed (NC=b contact), solid states switches (Model D-F9G, F9H) are also available.

For detail, refer to page 7-9-23 in Best Peneumatics 2004 Vol. 7 catalog.

\* For detail about auto switches with pre-wired connector, refer to page 7-9-36 in the Best Pneumatics 2004 Vol. 7 catalog.

### Free Mount Cylinder: Non-rotating Rod Type Double Acting, Single Rod Series CUK

23

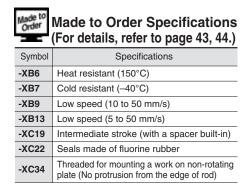

(mm)

 $(\alpha)$ 

Be sure to read before handling. Refer to back page 1 through to 6 for Safety Instructions, Actuator Precautions and Auto Switch Precautions.

#### **Operating Precautions**

#### A Caution

1. Do not place your fingers in the clearance between the non-rotating plate and the cylinder tube. Your fingers could get caught between the

Your fingers could get caught between the non-rotating plate and the cylinder tube when the piston rod retracts. Therefore, never place your finger in this area.

Because the cylinder outputs a great force, it could lead to injury if precautions are not taken to prevent your fingers from getting caught.

2. When using the non-rotating style, make sure that rotational torque is not applied to the piston rod. If rotational torque must be applied due to unavoidable circumstances, make sure to use it at the allowable rotational torque or less, which is shown in the table on the right.

#### Specifications

•										
Bore size (mm)	6	10	16	20	25	32

### Allowable Rotational Torque

Bore size (mm)	6	10	16	20	25	32
Allowable rotational torque (N·m)	0.0015	0.02	0.04	0.10	0.15	0.20

### **Tightening Torque**

When mounting Series CUK, refer to page 3.

### Auto Switch Mounting Position

to For the auto switch mounting position of Series CDUK, refer to page 6, since specifications are the same as standard ☐ type, double acting, single rod type.

### Theoretical Output

**∂SMC** 

Specifications are the same as CU series double acting, single rod. Refer to page 3.

### **Copper-free**

#### 20-CUK Bore size Stroke D

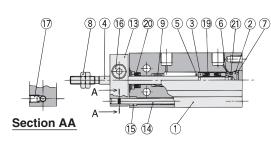

#### • Copper-free

The type which prevents copper based ions from generating by changing the copper based materials into electroless nickel plated treatment or noncopper materials in order to eliminate the effects by copper based ions or fluororesins over the color cathode ray tube.

#### **Minimum Operating Pressure**

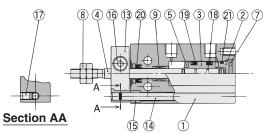

Minimum Operating Pressure (MPR

\* For the auto switch weight, refer to page 68 to 72.

### **Theoretical Output**

Specifications are the same as double acting, double rod (Series CUW). Refer to page 9.

#### Allowable Rotational Torque

Ensure that rotational torque is not applied to the piston rod of Series CUKW. If rotational torque are applied unavoidably, refer to page 22.

#### **Tightening Torque**

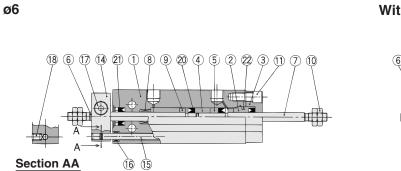

When mounting Series CUKW, refer to page 3.

#### Auto Switch Mounting Position

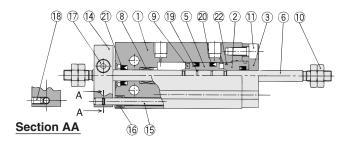

For the auto switch mounting position of Series CUKW, refer to page 12, since specifications are the same as double acting, double rod type.

### Made to Order Specifications (For details, refer to page 43, 44.)

Symbol	Specifications
-XC22	Seals made of fluorine rubber
-XC34	Threaded for mounting a work on non-rotating plate (No protrusion from the edge of rod)

### **Tightening Torque**

When mounting a CUK single acting series, refer to page 3.

### **Theoretical Output**

Specifications are the same as single acting, spring return/spring extend type (Series CU). Refer to page 14.

#### **Spring Reaction Force**

For the reactive force of spring return, refer to page 7-12-3 in Best Pneumatics 2004 Vol. 7 catalog.

### Auto Switch Mounting Position

For the auto switch mounting position of CDUK series single acting, spring return/spring extend, refer to page 19 to 20, since specification are the same as standard type, single acting, spring return/spring extend type.

#### Allowable Rotational Torque

Make sure that rotational torque is not applied to the piston rod of the CUK series single acting type cylinder. If the rotation torque were applied unavoidably, refer to page 22.

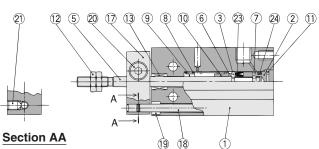

## Series CUK

#### **Auto Switch Mounting Position**

For the auto switch mounting position of CDU long stroke series, refer to page 6, since specifications are the same as standard type, double acting, single rod type.

#### **Tightening Torque**

Refer to page 3 for mounting a long stroke type.

#### **Theoretical Output**

Specifications are the same as CU series double acting, single rod. Refer to page 3.

JIS Symbol Double acting, Spring rod

Made to Order	Made to Order Specifications (For details, refer to P.43.)
Symbol	Specifications
-XB6	Heat resistant (150°C)

	· · · · · · · · · · · · · · · · · · ·
-XB7	Cold resistant (-40°C)
-XB9	Low speed (10 to 50 mm/s)
-XB13	Low speed (5 to 50 mm/s)
-XC19	Intermediate stroke (with a spacer built-in)
-XC22	Seals made of fluorine rubber

#### **Copper-free**

#### 20-CU Bore size -Stroke D

#### • Copper-free

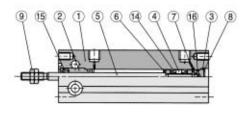

The type which prevents copper based ions from generating by changing the copper based materials into electroless nickel plated treatment or noncopper materials in order to eliminate the effects by copper based ions or fluororesins over the color cathode ray tube.

#### Allowable Rotational Torque

Make sure that rotational torque is not applied to the piston rod of a long stroke type cylinder. If the rotation torque were applied unavoidably, refer to page 22 for details.

#### **Tightening Torque**

When mounting a CUK long stroke series, refer to page 3.

#### Theoretical Output

Specifications are the same as CU series double acting, single rod. Refer to page 3.

#### Auto Switch Mounting Position

For the auto switch mounting position of CDUK long stroke series, refer to page 6, since specifications are the same as standard type, double acting, single rod type.

## Series CU Made to Order Specification

#### -XB6 Heat resistant (150°C)

#### Enter the applicable model number. -XB6

#### **Applicable Model**

CU	Standard, Double acting, Single rod
СИК	Non-rotating rod, Double acting, Single rod
CU	Long stroke, Double acting, Single rod
СИК	Non-rotating rod/Long stroke, Double acting, Single rod

#### Specifications

Ambient temperature range	–10 to 150°C
Auto switch	Not mountable
Seal material	Fluorine rubber
Grease in use	Heat resistant grease

Specifications other than described above and dimensions are identical to those of standard products.

#### -XB7 Cold resistant (–40°C)

#### Enter the applicable model number. -XB7

#### Applicable Model

CU	Standard, Double acting, Single rod
СИК	Non-rotating rod, Double acting, Single rod
CU	Long stroke, Double acting, Single rod
СИК	Non-rotating rod/Long stroke, Double acting, Single rod

#### Specifications

Ambient temperature range	–40 to 70°C
Auto switch	Not mountable
Seal material	Low nitrile rubber
Grease in use	Cold resistant grease

Specifications other than described above and dimensions are identical to those of standard products.

#### -XB9 Low speed (10 to 50 mm/s)

#### Enter the applicable model number. -XB9

#### **Applicable Model**

C(D)U	Standard, Double acting, Single rod
C(D)UK	Non-rotating rod, Double acting, Single rod
C(D)U	Long stroke, Double acting, Single rod
C(D)UK	Non-rotating rod/Long stroke, Double acting, Single rod

#### -XB13 Low speed (5 to 50 mm/s)

#### Enter the applicable model number. -XB13

#### **Applicable Model**

C(D)U	Standard, Double acting, Single rod
C(D)UK	Non-rotating rod, Double acting, Single rod
C(D)U	Long stroke, Double acting, Single rod
C(D)UK	Non-rotating rod/Long stroke, Double acting, Single rod

#### **-XC19** Intermediate stroke (with a spacer built-in)

Intermediate strokes are available by installing a spacer with 5 mm in width in the standard stroke cylinder.

#### Enter the applicable model number. - XC19

#### **Applicable Model**

C(D)U	Standard, Double acting, Single rod
C(D)UK	Non-rotating rod, Double acting, Single rod
C(D)U	Long stroke, Double acting, Single rod
C(D)UK	Non-rotating rod/Long stroke, Double acting, Single rod

#### **Applicable Stroke**

E 6

Bore size	Stroke						
6, 10, 16	35, 45, 55						
20, 25, 32	35, 45, 55, 65, 75, 85, 95						
The external dimension is the same as that of standard products with E							

The external dimension is the same as that of standard products with 5 mm added to strokes above. Consult with SMC when stroke other than applicable stroke is required.

### -XC22 Seals made of fluorine rubber

Seal materials are changed to the fluorine rubber.

#### Enter the applicable model number. -XC22

#### **Applicable Model**

C(D)U	Standard, Double acting, Single rod						
	Standard Single acting, Single rod (Retracted/Extended)						
	Non-rotating rod, Double acting, Single rod						
C(D)UK	Non-rotating rod, Single acting, Single rod (Retracted/Extended)						
C(D)U	Long stroke, Double acting, Single rod						
C(D)UK	Non-rotating rod/Long stroke, Double acting, Single rod						
The other specifications and dimensions are the same as those of							

standard products.

## Series CU Made to Order Specification

#### **-XC34** Threaded for mounting a work on non-rotating plate (No protrusion from the rod end)

\* Threaded for mounting a work on the plate.

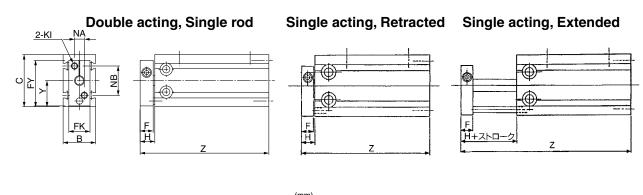

\* "FL" dimension across the non-rotating plate and the piston rod end is removed. Its piston rod does not stick out of the plate.

#### Enter the applicable model number. - XC34

#### **Applicable Model**

	Non-rotating rod, Double acting, Single rod				
C(D)UK	Non-rotating rod, Single acting, Single rod (Retracted/Extended)				
	Non-rotating rod/Long stroke, Double acting, Single rod

Minimum operating pressure (MPa)	0.06	0.06	0.05	0.05	0.05

## **Free Mount Cylinder** with Air Cushion

#### New air cushion mechanism

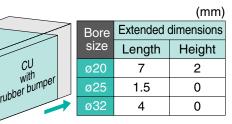

Free mount cylinder Series CU now employs an air cushion mechanism.

## Extended dimensions (compared to the standard CU models) are hardly noticeable.

(with rubber bumper)

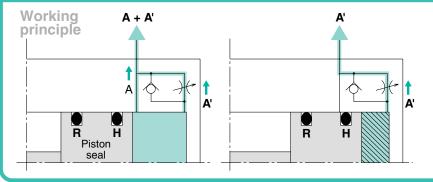

- Overall length: +1.5 to 7 mm with air cushion
- Overall height: +0 to 2 mm No air cushion protrusion!
- Overall width: not affected

### Unique air cushion construction requires no cushion ring.

Elimination of the cushion ring used in conventional type air cushions has made it possible to reduce the overall length of the cylinder while retaining all the advantages of a compact profile.

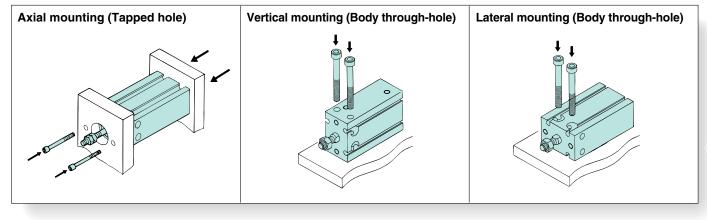

- 1 When the piston is retracting, air is exhausted through both A and A' until piston seal H passes air passage A.
- 2 After piston seal H has passed air passage A, air is exhausted only through A'. The section marked with slanted lines becomes a cushion chamber, and an air cushion effect is achieved.
- ③ When air is supplied for the piston extension, the check valve opens and the piston extends with no delay.

## **Reduced stroke end impact and noise:** New standards to meet consumer demand.

## **Free mounting**

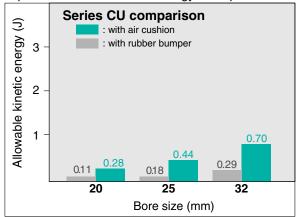

3 types of mounting orientations can be accommodated depending on the installation conditions.

## Approximately 2.4 times of allowable kinetic energy

(Compared to the old Series CU with rubber bumper)

Improved allowable kinetic energy absorption.

### Improved repeatability

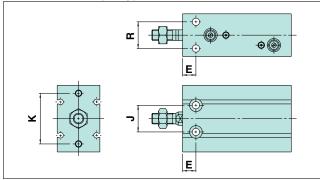

When compared to rubber bumper type actuators, air cushion type cylinders are less likely to be affected by pressure fluctuations, and therefore better able to achieve a stable and smooth stroke.

#### Improved sound insulation (Reduced impact noise at the stroke end)

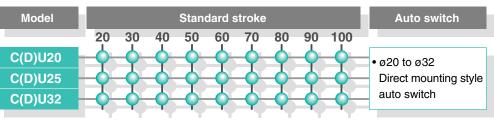

• Noise reduction of more than 11dB is possible (compared to Series CU20 with rubber bumper).

## Interchangeable mounting

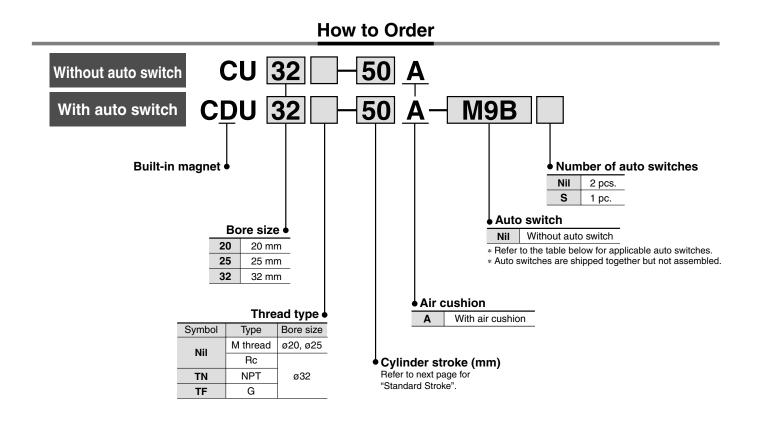

Mounting dimensions (J, K, R, and E) are the same as the rubber bumper type Series CU.

#### Size Variations

## Free Mount Cylinder with Air Cushion Series CU ø20, ø25, ø32

Applicable Auto	Switches/Refer	to page 68 to	72 for further	infomation on	auto switches.

32	22.5	13.5	11.5 (9)	26.5	17.5	7.5	26.5	17.5	9.5		

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

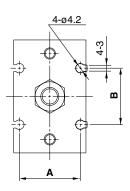

Note 2) Values in ( ) are dimensions for D-A93 type.

#### **Operating Range**

			(mm)					
Switch model	Bore size (mm)							
Switch model	20	25	32					
D-A9□, D-A9□V	11	12.5	14					
D-M9□, D-M9□V	5	5	5					
D-F9□W, D-F9□WV	6.5	7	7					

 $\ast$  Values in this table include hysteresis and are to be used as a guide only. They do not guarantee an actual fixed range (expect approximately  $\pm 30\%$  dispersion). Values may vary greatly depending on the operating environment.

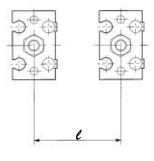

#### **Auto Switch Rail Position**

		(mm)
Bore size (mm)	Α	В
20	21	23
25	27	25
32	35	27

#### **Caution on Proximity Installation**

When free mounting cylinders equipped with auto switches are used, the auto switches could activate unintentionally if the installed distance is less than the dimensions shown in the table. Therefore, make sure to provide a greater clearance. Due to unavoidable circumstances, if they must be used with less distance than the dimensions given in the table, the cylinders must be shielded. Therefore, affix a steel plate or a magnetic shield plate (MU-S025) to the area on the cylinder that corresponds to the adjacent auto switch. (Please contact SMC for details.) Auto switches may malfunction if a shield plate is not used.

## Series CU Specific Product Precautions 1

Be sure to read before handling. Refer to back page 1 through to 6 for Safety Instructions, Actuator Precautions, and Auto Switch Precautions.

#### Installation and Removal of Snap Rings

### Caution

- 1. Use appropriate pliers (Type C snap ring installing tool) for installation and removal of snap rings.
- 2. Even when using appropriate pliers (Type C snap ring installing tool), proceed with caution as there is a danger of the snap ring flying off the end of the pliers (tool) and causing bodily injury or damage to nearby equipment. After installation, make sure that the snap ring is securely seated into the snap ring groove before supplying air.

## Mounting

### **≜**Caution

1. Refer to the below table for mounting cylinders.

**Tightening Torque** 

Bore sizes (mm)	Hexagon socket head cap screw (mm)	Proper tightening torque (N·m)
20, 25	M5	5.10 ±10%
32	M6	8.04 ±10%

#### Selection

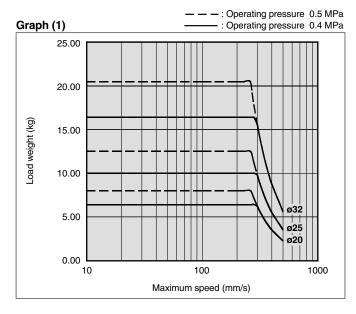

## **▲**Caution

1. Operate the cylinder to the stroke end.

When the stroke is restricted by an external stopper or a clamped workpiece, sufficient cushioning and noise reduction may not be achieved.

2. Strictly observe the limiting ranges for load weight and maximum speed (Graph (1)). Also, the limiting ranges provided here are based on the condition that the cylinder is operated to the stroke end with a proper cushion needle adjustment.

If operated beyond the limiting ranges, excessive impact will occur and this may cause damage to equipment.

#### Selection

#### 

3. Adjust the cushion needle to reduce excessive kinetic energy from the piston impact at the stroke end by allowing it to absorb sufficient kinetic energy during the cushion stroke.

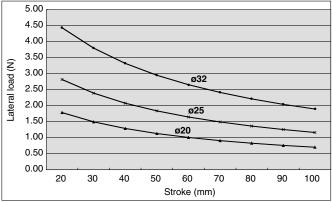

If due to improper adjustment, the piston impacts the stroke end with excessive kinetic energy (values above those given in Table (1)), an excessive impact will occur and this may cause damage to equipment.

Table (1) Allowable Kinetic Energy at Piston Impact											
	20	25	32								
Piston speed		50 to 500 mm/s									
Allowable kinetic energy	0.055	0.09	0 15								

#### Strictly observe the limiting ranges for the piston rod lateral load (Graph (2)).

If operated beyond the limiting ranges, equipment life may be reduced or damage to equipment may occur.

#### Piston Rod Lateral Load (Graph (2))

#### **Cushion Needle Adjustment**

#### Caution

1. Keep the adjustment range for the cushion needle between the fully closed position and the rotations shown below.

	Rotations
ø20 to ø32	2.5 rotations or less

Use a 3 mm flat head watchmakers' screwdriver to adjust the cushion needle. The adjustment range for the cushion needle must be between the fully closed position and the open position ranges indicated in the above table. A retaining mechanism prevents the cushion needle from slipping out; however, it may spring out during operation if it is rotated beyond the ranges shown above.

## Free Mount Cylinder for Vacuum

## A free mount cylinder with a vacuum passage in the rod to meet the requirements for

## Air cylinder + Vacuum pad.

A vacuum passage has been provided in the rod of the CUK cylinder to enable a vacuum pad to be installed on the end of the rod.

## Not necessary to provide vacuum tubing space at the end of the rod.

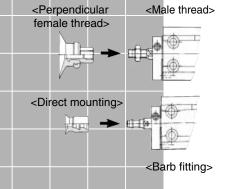

The area around the vacuum pad is uncluttered.

#### Non-rotationg rod .

A guide is provided as star	ndard
equipment	
Non-rotating rod accuracy	
(no load: when the rod is	
retracted on the detent pla	te side):
ø10, ø16 ———	±0.8°
ø20, ø25, ø32 ———	— ±0.5°
Do not apply a lateral load	to the

piston rod. Because the piston rod is a hollow rod, a lateral load can cause the piston rod to bend or break.

#### • Vacuum pad (Pad diameter: ø2 to ø50) •

#### Auto switch

Reed switch: D-A9
 (Heavy-duty cord, in-line entry) D-A9 V (Heavy-duty cord, perpendicular entry)

Solid state switch: D-M9, D-F9W (Heavy-duty cord, in-line entry) D-M9 V, D-F9 WV (Heavy-duty cord, perpendicular entry)

#### How to provide piping to the vacuum side

#### Cap piping

The piston rod of the vacuum side does not protrude. Also, the vacuum outlet tube does not move when the piston is operating.

Vacuum port pressure range: -101 kPa to 0.6 MPa Pressurize only when releasing the vacuum. At that time, use it under the cylinder operating pressure.

Rod piping

Lighter weight than the cap piping. Can also be used for air blowing. Vacuum port pressure range: -101 kPa to 0.6 MPa

### A Precautions

Be sure to read before handling. Refer to back page 1 through to 6 for Safety Instructions, Actuator Precautions and Auto Switch Precautions. Also see page 13-1-5 for Vacuum Equipment Precautions in the Best Pneumatics 2004 Vol. 13 catalog.

#### **A** Caution

1. Do not place your finger in the clearance between the detent plate and the cylinder tube.

Never put your finger between the nonrotating plate and cylinder tube. Your finger may be pinched when the piston rod retracts.

If your finger is caught, it could injure your finger because the cylinder outputs a considerable amount of force.

2. Make sure that rotational torque is not applied to the piston rod. If this is unavoidable, operate the cylinder within the allowable rotational torque listed in the table below.

#### Allowable Rotational Torque

Bore size (mm)	ø10	ø16	ø20	ø25	ø32
Allowable rotational torque (N·m)	0.02	0.04	0.10	0.15	0.20

- To secure a workpiece to the end of the piston rod, tighten the workpiece onto the piston rod with the piston rod fully retracted so that torque is not applied to the piston rod.
- **4.** To install a cylinder, tighten it within the torque values indicated in the table below.

#### **Proper Tightening Torque**

Bore size (mm)	Hexagon socket head bolt diameter (mm)	Proper tightening torque (N·m)				
ø10	M3	1.08 ±10%				
ø16	M4	2.45 ±10%				
ø20, ø25	M5	5.10 ±10%

#### Proper Auto Switch Mounting Position (Detection at stroke end) and Its Mounting Height

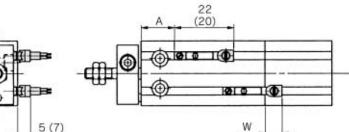

(): Denotes the values of D-A93.

D-A9□V D-M9□V D-F9 WV

**D-A9**□ D-M9□ D-F9□W

(): Denotes the values of D-M9□V, D-F9□WV.

Bore size	D-A9	)□, D-A	<b>\9</b> □V	D-M9	)□, D-F	9□W	D-M9□V, D-F9□WV			
(mm)	n) <b>A B W</b>		A B W A B W		A B		w			
10	12.5	3	-1.5 (1)	16.5	7.5	2.5	16.5	7.5	0.5	
16	16	4	-2 (0.5)	20	8	1.5	20	8	0	
20	20	6	-4 (-1.5)	24	10	0	24	10	-2	
25	22.5	7	-5.5 (-3)	26.5	11.5	-1.5	26.5	11.5	-3.5	
32	23.5	8	-6.5 (-4)	27.5	12.5	-2.5	27.5	12.5	-4.5	

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 2) Negative figures in the table show dimensions mounted inside cylinder body.

Note 3) In the case of 5 mm stroke or the 10 mm stroke, there are times in which the switch will not turn OFF or 2 switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 switches are used, make sure that both switches turn ON).

Note 4) Figures in ( ) in the table W are D-A93.

#### **Operation Range**

Auto switch model		Bore size (mm)										
Auto switch model	10	16	20	25	32							
D-A9□/A9□V	6	9	11	12.5	14							
D-M9□/M9□V	2.5	3.5	5	5	5							
	3.5	5.5	6.5	7	7							

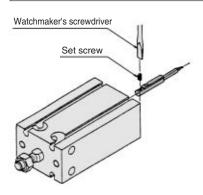

\* Since this is the average value at a normal temperature including hysteresis (tolerance ±30%), it is not guaranteed.

#### 60

#### **Auto Switch Specifications**

#### Mounting of Auto Switch

#### Mounting

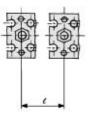

To tighten the auto switch mounting screws, use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm.
Tighten the screws to a torque of

 Fighten the screws to a torque of approximately 0.10 to 0.20 N·m.

#### **Cautions on Proximity Installation**

When free mounting cylinders equipped with auto switches are used, the auto switches could activate unintentionally if the installed distance is less than the dimensions shown in the table. Therefore, make sure to provide a greater clearance. Due to unavoidable circumstances, if they must be used with less distance than the dimensions given in the table, the cylinders must be shielded. Therefore, affix a steel plate or a magnetic shield plate (MU-S025) to the area on the cylinder that corresponds to the adjacent auto switch. (Please contact SMC for details.) Auto switches may malfunction if a shield plate is not used.

## Series CU Auto Switch Specifications

#### Auto Switch Common Specifications

Туре	Reed switch	Solid state switch							
Leakage current	None	3-wire: 100 µA or less 2-wire: 0.8 mA or less							
Operating time	1.2 ms	1 ms or less							
Impact resistance	300 m/s <sup>2</sup>	1000 m/s <sup>2</sup>							
Insulation resistance	50 M $\Omega$ or more at 500 VDC Meg	ga (between lead wire and case)							
Withstand voltage	1000 VAC for 1 minute (be	etween lead wire and case)							
Ambient temperature	-10 to 60°C								
Enclosure	IEC529 standard IP67, JIS C 0920 watertight construction								

#### Lead Wire Length

Note 1) Applicable auto switch with 5 m lead wire "Z"

- Solid state switch: Manufactured upon receipt of order as standard. Note 2) To designate solid state switches with flexible specifications, add "-61" after the lead wire length.
- ★ Oilproof flexible heavy-duty cord is used for D-M9□ as standard. There is no need to suffix -61 to the end of part number.

(Example) D-F9PWVL- 61

Flexible specification

#### Contact Protection Box: CD-P11, CD-P12

#### <Applicable switch model>

D-A9•A9□V

The auto switches above do not have a built-in contact protection circuit. Therefore, please use a contact protection box with the switch for any of the following cases:

① Where the operation load is an inductive load.

2 Where the wiring length to load is greater than 5 m.

③ Where the load voltage is 100 VAC.

The contact life may be shortened. (Due to permanent energizing conditions.)

#### **Specifications**

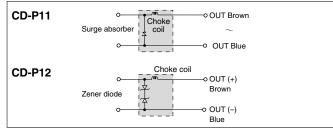

Part No.	CD-	P11	CD-P12
Load voltage	100 VAC	200 VAC	24 VDC
Maximum load current	25 mA	12.5 mA	50 mA

\* Lead wire length — Switch conneciton side 0.5 m

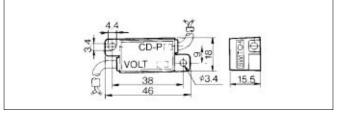

Load connection side 0.5 m

#### Internal Circuit

#### Dimension

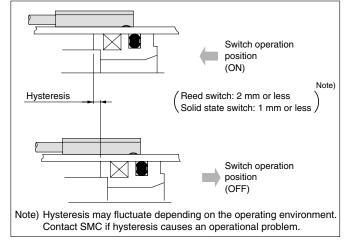

#### Connection

To connect a switch unit to a contact protection box, connect the lead wire from the side of the contact protection box marked SWITCH to the lead wire coming out of the switch unit. Keep the switch as close as possible to the contact protection box, with a lead wire length of no more than 1 meter.

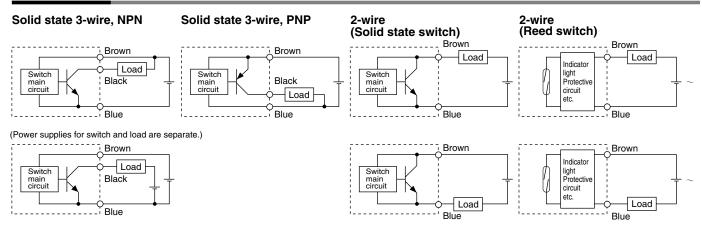

## Auto Switch Hysteresis

The hysteresis is the difference between the position of the auto switch as it turns "on" and as it turns "off". A part of operating range (one side) includes this hysteresis.

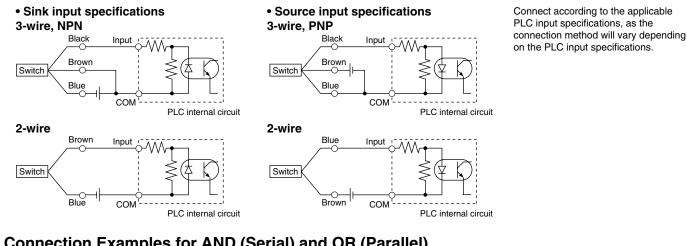

## Series CU **Auto Switch Connections and Examples**

#### **Basic Wiring**

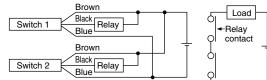

#### Examples of Connection to PLC (Programmable Logic Controller)

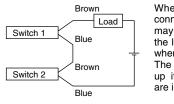

#### Connection Examples for AND (Serial) and OR (Parallel)

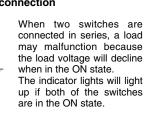

AND connection for NPN output (using relays)

#### 2-wire with 2-switch AND connection

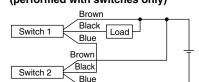

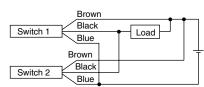

Example: Power supply is 24 VDC. Internal voltage drop in switch is 4 V.

#### AND connection for NPN output (performed with switches only)

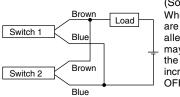

**OR connection for NPN output** 

The indicator lights will light up when both switches are turned ON.

#### 2-wire with 2-switch OR connection

OFF state.

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance = 1 mA x 2 pcs. x 3 kΩ = 6 V

SMC

(Solid state swich) When two switches are connected in parallel, a malfunction may occur because the load voltage will increase when in the (Reed switch)

Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of switches in the ON state, the indicator lights may sometimes dim or not light because of the dispersion and reduction of the current flowing to the switches.

## Reed Switch: Direct Mounting Style D-A90(V)/D-A93(V)/D-A96(V) ( €

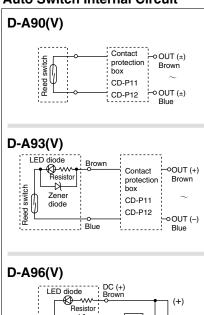

#### Grommet Electrical entry : In-line

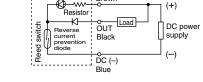

▲Caution Operating Precautions

Fix the switch with the existing screw installed on the switch body. The switch may be damaged if a screw other than the one supplied, is used.

#### **Auto Switch Internal Circuit**

Note) ① In a case where the operation load is an inductive load.

- 2 In a case where the wiring load is
- greater than 5 m.
- ③ In a case where the load voltage is 100 VAC.

Please use the auto switch with a contact

protection box any of the above mentioned cases. (For details about the contact protection box, refer to page 68.)

#### **Auto Switch Specifications**

For details about certified products conforming to international standards, visit us at www.smcworld.com.

PLC: Abbroviation for Programmable Logic Controllor

## Series CU Safety Instructions

The following safety instructions are intended to prevent a hazardous situation and/or equipment damage. The instructions indicate the level of potential hazard by labels of **"Caution", "Warning"** or **"Danger"**. To ensure safety, please observe all safety practices, including ISO 4414 <sup>Note 1</sup> and JIS B 8370 <sup>Note 2</sup>).

Note 2) JIS B 8370: General Rules for Pneumatic Equipment

## **Warning**

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility with a specific pneumatic system must be based on specifications, post analysis and/or tests to meet a specific requirement. The expected performance and safety assurance is the responsibility of the person who determines the compatibility of the system. This person should continuously review the suitability of all specified items by referring to the latest information in the catalog and by taking into consideration the possibility of equipment failure when configuring the system.

2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.

- 3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.
  - 1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driver objects have been confirmed.
  - 2. When equipment is to be removed, confirm the all safety precautions have been followed. Cut the supply pressure for this equipment and exhaust all residual compressed air in the system.
  - 3. Before restarting any machinery/equipment, excercise caution to prevent quick extension of a cylinder piston rod, etc.

#### 4. Contact SMC if the product is to be used in any of the following conditions:

- 1. Conditions and environments beyond the given specifications, or if product is used outdoors.
- 2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
- 3. An application which has the possibility of having a negative effect on people, property, or animals, requiring special safety analysis.

## Series CU Actuator Precautions 1

Be sure to read before handling.

#### **Caution on Design**

## **A** Warning

1. There is a possibility of dangerous sudden action by air cylinders if sliding parts of machinery are twisted due to external forces, etc.

In such cases, human injury may occur; e.g., by catching hands or feet in the machinery, or damage to the machinery itself may occur. Therefore, the machine should be adjusted to operate smoothly and designed to avoid such dangers.

2. A protective cover is recommended to minimize the risk of personal injury.

If a stationary object and moving parts of a cylinder are in close proximity, personal injury may occur. Design the structure to avoid contact with the human body.

- **3. Securely tighten all stationary parts and connected parts so that they will not become loose.** Especially when a cylinder operates with high frequency or is installed where there is a lot of vibration, ensure that all parts remain secure.
- 4. A deceleration circuit or shock absorber may be required.

When a driven object is operated at high speed or the load is heavy, a cylinder's cushion will not be sufficient to absorb the impact. Install a deceleration circuit to reduce the speed before cushioning, or install an external shock absorber to relieve the impact. In this case, the rigidity of the machinery should also be examined.

5. Consider a possible drop in circuit pressure due to a power outage, etc.

When a cylinder is used in a clamping mechanism, there is a danger of workpieces dropping if there is a decrease in clamping force due to a drop in circuit pressure caused by a power outage, etc. Therefore, safety equipment should be installed to prevent damage to machinery and human injury. Suspension mechanisms and lifting devices also require consideration for drop prevention.

6. Consider a possible loss of power source.

Measures should be taken to protect against bodily injury and equipment damage in the event that there is a loss of power to equipment controlled by pneumatics, electricity, or hydraulics.

## 7. Design circuitry to prevent sudden lurching of driven objects.

When a cylinder is driven by an exhaust center type directional control valve or when starting up after residual pressure is exhausted from the circuit, etc., the piston and its driven object will lurch at high speed if pressure is applied to one side of the cylinder because of the absence of air pressure inside the cylinder. Therefore, equipment should be selected and circuits designed to prevent sudden lurching, because there is a danger of human injury and/or damage to equipment when this occurs.

#### 8. Consider emergency stops.

Design so that human injury and/or damage to machinery and euqipment will not be caused when machinery is stopped by a safety device under abnormal conditions, a power outage or a manual emergency stop.

9. Consider the action when operation is restarted after an emergency stop or abnormal stop.

Design the machinery so that human injury or equipment damage will not occur upon restart of operation.

When the cylinder has to be reset at the starting position, install manual safely equipment.

#### Selection

## **A** Warning

#### 1. Confirm the specifications.

The products featured in this catalog are designed for use in industrial compressed air systems. If the products are used in conditions where pressure and/or temperature are outside the range of specifications, damage and/or malfunctions may occur. Do not use in these conditions. (Refer to the specifications.)

Consult with SMC if you use a fluid other than compressed air.

## **A** Caution

1. Operate within the limits of the maximum usable stroke.

The piston rod will be damaged if operated beyond the maximum stroke. Refer to the air cylinder's model selection procedure for the maximum stroke availability.

2. Operate the piston within a range such that collision damage will not occur at the stroke end.

Operate within a range such that damage will not occur when the piston, having inertial force, stops by striking the cover at the stroke end. Refer to the cylinder model selection procedure for the range within which damage will not occur.

3. Use a speed controller to adjust the cylinder drive speed, gradually increasing from a low speed to the desired speed setting.

#### Mounting

## **Caution**

1. Be certain to match the rod shaft center with the direction of the load and movement when connecting.

When not properly matched, problems may arise with the rod and tube, and damage may be caused due to friction on areas such as the inner tube surface, bushings, rod surface and seals.

2. When an external guide is used, connect the rod end and the load in such a way that there is no interference at any point within the stroke.

#### 3. Do not scratch or gouge the sliding parts of the cylinder tube or tube rod, etc., by striking or grasping them with other objects.

Cylinder bores are manufactured to precise tolerances, so that even a slight deformation may cause malfunction. Also, scratches or gouges, etc., in the tube rod may lead to damaged seals and cause air leakage.

#### 4. Prevent the seizure of rotating parts.

Prevent the seizure of rotating parts (pins, etc.) by applying grease.

Be sure to read before handling.

#### Mounting

### **A** Caution

#### Do not use until you verify that the equipment can operate properly.

After mounting, repairs, or modification, etc., connect the air supply and electric power, and then confirm proper mounting by means of appropriate function and leak tests.

#### 6. Instruction manual

Install the products and operate them only after reading the instruction manual carefully and understanding its contents. Also keep the manual where it can be referred to as necessary.

#### Piping

### **A** Caution

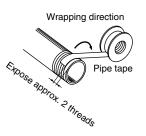

#### 1. Preparation before pipig

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

#### 2. Wrapping of pipe tape

When screwing in pipes and fittings, etc., be certain that chips from the pipe threads and sealing material will not ingress inside the piping.

Also, when pipe tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

#### Lubrication

## **Caution**

#### 1. Lubrication to cylinders

The cylinder has been lubricated at the factory and can be used without any further lubrication.

#### Air Supply

## **Warning**

#### 1. Use clean air.

Do not use compressed air which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as this can cause damage or malfunction.

#### **Air Supply**

### **A**Caution

#### 1. Install air filters.

Install air filters close to valves at their upstream side. A filtration degree of 5  $\mu m$  or less should be selected.

#### Install an aftercooler, air dryer, or water separator (Drain Catch).

Air that includes excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an air dryer, aftercooler or water separator, etc.

## 3. Use the product within the specified range of fluid and ambient temperature.

Take measures to prevent freezing when below 5°C, since moisture in circuits can freeze and cause damage to seals and lead to malfunctions.

For details on the quality of compressed air mentioned above, refer to SMC's "Best Pneumatics" catalog vol. 14.

#### **Operating Environment**

## \land Warning

- 1. Do not use in atmospheres or locations where corrosion hazards exist.
- 2. In dusty locations or where water or oil, etc., splash on the equipment, take suitable measures to protect the rod.
- 3. When using auto switches, do not operate in an environment with strong magnetic fields.

#### Maintenance

## A Warning

1. Perform maintenance procedures as shown in the instruction manual.

If it is handled improperly, malfunction or damage of machinery or equipment may occur.

## 2. Removal of equipment, and supply/exhaust of compressed air

Before any machinery or equipment is removed, first ensure that the appropriate measures are in place to prevent the fall or erratic movement of driven objects and equipment, then cut off the electric power and reduce the pressure in the system to zero. Only then should you proceed with the removal of any machinery and equipment.

When machinery is restarted, proceed with caution after confirming that appropriate measures are in place to prevent cylinders from sudden movement.

## A Caution

#### 1. Drain flushing

Remove drainage from air filters regularly.

## Series CU Auto Switch Precautions 1

Be sure to read before handling.

#### Design and Selection

## **Warning**

#### 1. Confirm the specifications.

Read the specifications carefully and use this product appropriately. The product may be damaged or malfunction if it is used outside of its specification range (eg. current load, voltage, temperature or impact, etc.).

## 2. Pay attention to the length of time that a switch is on at an intermediate stroke position.

When an auto switch is placed at an intermediate position of the stroke and a load connected to the auto switch is driven at the time the slide table passes, the auto switch will operate. However if the speed is too great, the operating time will be shortened and the load may not operate properly. The maximum detectable piston speed is:

$$V (mm/s) = \frac{Auto switch operating range (mm)}{Load operating time (ms)} \times 1000$$

## 3. Keep wiring as short as possible. <Reed switch>

As the length of the wiring to a load gets longer, the rush current at the time the switch is turned ON becomes greater, which may shorten the product's life. (The switch will stay ON all the time.)

1) Use a contact protection box when the wire length is 5 m or longer.

#### <Solid state switch>

2) Although the wire length should not affect switch function, use a wire that is 100 m or shorter.

## 4. Take precautions for the internal voltage drop of the switch.

#### <Reed switch>

- 1) Switches with an indicator light (Except D-A96, A96V)
  - If auto switches are connected in series as shown below, take note that there will be a large voltage drop because of internal resistance from the light emitting diodes. (Refer to internal voltage drop in the auto switch specifications.) [The voltage drop will be "n" times larger when "n" auto switches are connected.]

Even though an auto switch operates normally, the load may not operate.

• Similarly, when operating below a specified voltage, it is possible that the load may be ineffective even though the auto switch function is normal. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

Supply \_ Internal voltage > Minimum operating voltage drop of switch > voltage of load

2) If the internal resistance of a light emitting diode causes a problem, select a switch without an indicator light (Model A90, A90V).

#### <Solid state switch>

3) Generally, the internal voltage drop will be greater with a 2wire solid state auto switch than with a reed switch. Take the same precautions as in item (1) as mentioned above. Also, note that a 12 VDC relay is not applicable.

### 5. Pay attention to leakage current.

#### <Solid state switch>

With a 2-wire solid state auto switch, current (leakage current) flows to the load to operate the internal circuit even when in the OFF state.

Current to operate load (Input OFF signal of controller) > Leakage current

If the condition given in the above formula is not met, internal circuit will not reset correctly (stays ON). Use a 3-wire switch if this specification cannot be satisfied.

Moreover, leakage current flow to the load will be "n" times larger when "n" auto switches are connected in parallel.

#### Do not use a load that generates surge voltage.

#### <Reed switch>

If driving a load such as a relay which generates a surge voltage, use a contact protection box.

#### <Solid state switch>

Although a zener diode for surge protection is connected at the output side of a solid state auto switch, damage may still occur if a surge is applied repeatedly. When directly driving a load which generates a surge, such as a relay or solenoid valve, use a switch with a built-in surge absorbing element.

#### 7. Cautions for use in an interlock circuit

When an auto switch is used for an interlock signal requiring high reliability, devise a double interlock system to safeguard against malfunctions. The double interlock system should provide a mechanical protection function or use another switch (sensor) together with the auto switch. Also perform periodic inspection and confirm proper operation.

## 8. Ensure sufficient clearance for maintenance activities.

When designing an application, be sure to allow sufficient clearance for maintenance and inspections.

Series CU Auto Switch Precautions 2

Be sure to read before handling.

#### Mounting and Adjustment

## **Warning**

#### 1. Do not drop or bump.

Do not drop, bump or apply excessive impacts (300m/s<sup>2</sup> or greater for reed switches and 1000m/s<sup>2</sup> or greater for solid state switches) while handling.

Although the body of the switch may not be damaged, the inside of the switch could be damaged and cause a malfunction.

## 2. Do not carry a cylinder by the auto switch lead wires.

Never carry a cylinder by its lead wires. This may not only cause broken lead wires, but it may cause internal elements of the switch to be damaged by the stress.

## 3. Mount switches using the proper tightening torque.

When a switch is tightened above the torque specification, the mounting screws, or switch may be damaged. On the other hand, tightening below the torque specification may allow the switch to slip out of position. (Refer to page 7 for switch mounting and tightening torque.)

## 4. Mount a switch at the center of the operating range.

Adjust the mounting position of an auto switch so that the piston stops at the center of the operating range (the range in which a switch is ON). If mounted at the end of the operating range (around the borderline of ON and OFF), operation will be unstable.

#### <D-M9□>

When the D-M9 auto switch is used to replace old series auto switch, it may not activate depending on operating condition because of its shorter operating range. Such as

- Application where the stop position of actuator may vary and exceed the operating range of the auto switch, for example, pushing, pressing, clamping operation, etc.
- Application where the auto switch is used for detecting an intermediate stop position of the actuator. (In this case the detecting time will be reduced.)

In these applications, please set the auto switch to the center of the

## **A** Caution

1. Fix the switch with the appropriate screw installed on the switch body. The switch may be damaged if other screws are used.

#### Wiring

### **A** Warning

- **1. Avoid repeatedly bending or stretching lead wires.** Broken lead wires will result from repeatedly applying bending stress or stretching force to the lead wires.
- 2. Be sure to connect the load before power is applied.

#### <2-wire type>

If the power is turned ON when an auto switch is not connected to a load, the switch will be instantly damaged because of excess current.

#### 3. Confirm proper insulation of wiring.

Be certain that there is no faulty wiring insulation (such as contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.

#### Wiring

## 4. Do not wire in conjunction with power lines or high voltage lines.

Wire separately from power lines or high voltage lines, avoiding parallel wiring or wiring in the same conduit with these lines. Control circuits containing auto switches may malfunction due to noise from these lines.

#### 5. Do not allow short circuit of loads.

#### <Reed switch>

If the power is turned ON with a load in a short circuited condition, the switch will be instantly damaged because of excess current flow into the switch.

#### <Solid state switch>

D-M9 $\Box$  and all models of PNP output type switches do not have built-in short circuit protection circuits. If loads are short circuited, the switches will be instantly damaged, as in the case of reed switches.

Take special care to avoid reverse wiring with the brown [red] power supply line and the black [white] output line on 3-wire type switches.

#### 6. Avoid incorrect wiring.

#### <Reed switch>

A 24 VDC switch with indicator light has polarity. The brown [red] lead wire is (+), and the blue [black] lead wire is (–).

- If connections are reversed, the switch will still operate, but the light emitting diode will not light up. Also note that a current greater than the maximum specified one will demage a light omitting diode and make it incorrelate.
  - will damage a light emitting diode and make it inoperable. Applicable models: D-A93, A93V

#### <Solid state switch>

- Even if connections are reversed on a 2-wire type switch, the switch will not be damaged because it is protected by a protection circuit, but it will remain in a normally ON state. But reverse wiring in a short circuit load condition should be avoided to protect the switch from being damaged.
- 2) Even if (+) and (-) power supply line connections are reversed on a 3-wire type switch, the switch will be protected by a protection circuit. However, if the (+) power supply line is connected to the blue [black] wire and the (-) power supply line is connected to the black [white] wire, the switch will be damaged.

#### <D-M9□>

D-M9 $\Box$  does not have built-in short circuit protection circuit. Be aware that if the power supply connection is reversed (e.g. (+) power supply wire and (-) power supply wire connection is reversed), the switch will be damaged.

#### \* Lead wire color changes

Lead wire colors of SMC switches have been changed in order to meet NECA Standard 0402 for production beginning September, 1996 and thereafter. Please refer to the tables provided. Special care should be taken regarding wire polarity during the

time that the old colors still coexist with the new colors. 2-wire 3-wire

2-wire					
	Old color	Wire color after change			
Output (+)	Red	Brown			
Output (-)	Black	Blue			

#### Solid state

with diagnostic output			
Old color	Wire color after change		
Red	Brown		
Black	Blue		
White	Black		
Yellow	Orange		
	Old color Red Black White		

	Old color	Wire color after change	
Power supply	Red	Brown	
GND	Black	Blue	
Output	White	Black	
Latch type solid state			

#### with diagnostic output

	Old color	Wire color after change
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black
Latch type Diagnostic output	Yellow	Orange

#### Wiring

## **A**Caution

1. When the cable sheath is stripped, confirm the stripping direction. The insulator may be split or damaged depending on the direction. (D-M9□ only)

Recommended tool

Manufacturer	Model name	Model no.	
VESSEL	Wire stripper	No 3000G	
TOKYO IDEAL CO., LTD	Strip master	45-089	

\* Stripper for a round cable (ø2.0) can be used for a 2-wire type cable.

#### **Operating Environment**

## **Warning**

#### 1. Never use in an atmosphere of explosive gases.

The construction of the auto switch is not intended to prevent explosion. Never use in an atmosphere with an explosive gas since this may cause a serious explosion.

## 2. Do not use in an area where a magnetic field is generated.

The auto switch will malfunction or the magnets inside of an actuator will become demagnetized. (There may be the case where the magnetic field resistant auto switch is usable. Contact us for further details.)

## 3. Do not use in an environment where the auto switch will be continually exposed to water.

The switch satisfies the IEC standard IP67 construction (JIS C 0920: watertight construction). Nevertheless, it should not be used in applications where it is continually exposed to water splash or spray. This may cause deterioration of the insulation or swelling of the potting resin inside switch causing a malfunction.

## 4. Do not use in an environment with oil or chemicals.

Consult with SMC if the auto switch will be used in an environment laden with coolant, cleaning solvent, various oils or chemicals. If the auto switch is used under these conditions for even a short time, it may be adversely effected by a deterioration of the insulation, a malfunction due to swelling of the potting resin, or hardening of the lead wires.

#### 5. Do not use in an environment with temperature cycles.

Consult with SMC if the switch is used where there are temperature cycles other than normal temperature changes, as they may adversely affected the switch internally.

#### **Operating Environment**

## 6. Do not use in an environment where there is excessive impact shock.

#### <Reed switch>

When excessive impact (300 m/s<sup>2</sup> or more) is applied to a reed switch during operation, the contact point may malfunction and generate a signal momentarily (1 ms or less) or cut off. Consult with SMC regarding the need to use a solid state switch in a specific environment.

## 7. Do not use in an area where surges are generated.

#### <Solid state switch>

When there are units (such as solenoid type lifters, high frequency induction furnaces, motors, etc.) that generate a large amount of surge in the area around an actuator with a solid state auto switch, their proximity or pressure may cause deterioration or damage to the internal circuit of the switch. Avoid sources of surge generation and disorganized lines.

## 8. Avoid accumulation of iron waste or close contact with magnetic substances.

When a large amount of iron waste such as machining chips or spatter is accumulated, or a magnetic substance (something attracted by a magnet) is brought into close proximity with an auto switch cylinder, it may cause the auto switch to malfunction due to a loss of the magnetic force inside the cylinder.

#### Maintenance

### \land Warning

- 1. Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.
  - Securely tighten switch mounting screws.
     If screws become loose or the mounting position is dislocated, retighten them after readjusting the mounting position.
  - Confirm that there is no damage to the lead wires. To prevent faulty insulation, replace switches or repair lead wires, etc., if damage is discovered.
  - 3) Confirm that the green light on the 2-color display type switch lights up.

Confirm that the green LED is ON when stopped at the set position. If the red LED is ON, when stopped at the set position, the mounting position is not appropriate. Readjust the mounting position until the green LED lights up.

Other

## \land Warning

1. Consult with SMC concerning water resistance, elasticity of lead wires, usage at welding sites, etc.
