

Description

The CXG1235XR is an SP5T antenna switch.

On chip logic reduces component count and simplifies PCB layout by allowing direct connection of the switch to digital baseband control lines with the CMOS logic levels. It requires 3 CMOS control lines.

The Sony GaAs JPHEMT MMIC Process is used for low insertion loss.

*2 Power incident on Ant, Pin = 0dBm, 1805 to 2170MHz.

Recommended Circuit

When using this IC, the following external components should be used:

- CRF: This capacitor is used for RF decoupling and must be used all applications.
- Cbypass: This capacitor is used for DC line filtering. 100pF is recommended.

*1 Inductor (56nH) is recommended on Ant port for ESD protection.
Capacitors are required on all RF ports for DC blocking.
