

CYPRESS

COMLINK™ SERIES

CY2CC1910

1:10 Clock Fanout Buffer with Output Enable

Features

- Low-voltage operation
- Full-range support:
 - 3.3V
 - 2.5V
 - 1.8V
- 1:10 fanout
- Drives either a 50-Ohm or 75-Ohm load
- Over voltage tolerant input hot swappable
- Low-input capacitance
- Low-output skew
- Low-propagation delay
- Typical ($t_{pd} < 4$ ns)
- High-speed operation:
 - 100 MHz@1.8V
 - 200 MHz@2.5V/3.3V
- Industrial versions available
- Available packages include: SOIC, SSOP

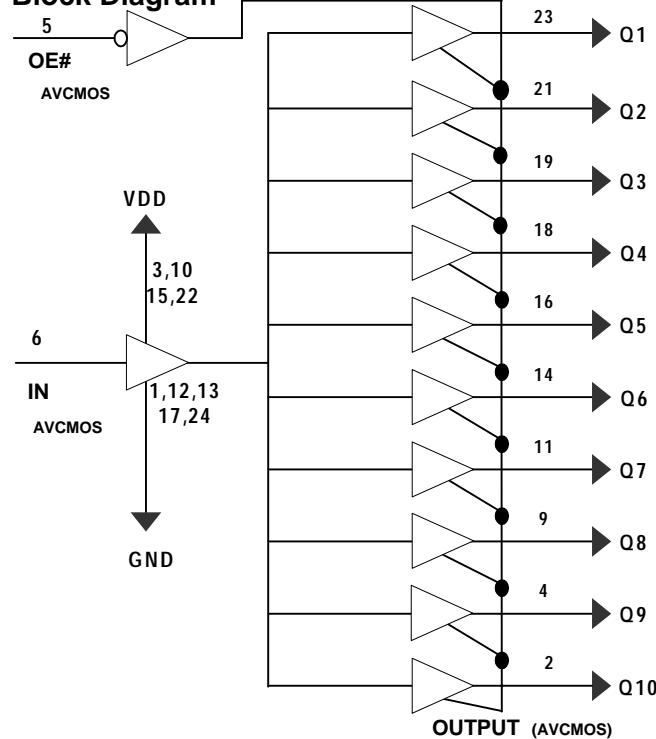

Description

The Cypress series of network circuits are produced using advanced 0.35-micron CMOS technology, achieving the industries fastest logic and buffers.

The Cypress CY2CC1910 fanout buffer features one input and ten outputs. Ideal for conversion from/to 3.3V/2.5V/1.8V.

Designed for data communications clock management applications, the large fanout from a single input reduces loading on the input clock.

Cypress employs unique AVCMOS-type outputs VOI™ (Variable Output Impedance) that dynamically adjust for variable impedance matching and eliminate the need for series damping resistors; they also reduce noise overall.

Note:

- Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
