**Description**

The D171-Type Photodetector consists of a PIN coupled to a multimode fiber pigtail. The device is available in a 4-pin mini-DIL configuration (see Figure 3 and/or Table 1) and is ideal for long-reach (SONET) and other high-speed digital applications.

The D171-Type PIN Photodetector is a rear-illuminated planar diode structure with a low-capacitance active area for maximum responsivity and speed.

This device incorporates the new Laser 2000 manufacturing process from the Optoelectronics Products unit of Lucent Technologies Microelectronics Group. Laser 2000 is a low-cost platform that targets high-volume manufacturing and tight product distributions on all optical subassemblies. This platform incorporates an advanced optical design that is produced on Opto's highly automated production lines. The Laser 2000 platform is qualified for central office and uncontrolled environments, and can be used for applications requiring high performance and low cost.

**Notes:**

This equivalent circuit is intended for modeling the package capacitance. Minimum capacitance is achieved by connecting the N-side to ground, applying a negative voltage to the P-side, and allowing the package to float (i.e., not connected to ground).

- Typical values are as follows:
- $C_O = 0.3 \text{ pF to } 0.5 \text{ pF}$ .
- $L_N, L_P = 3.0 \text{ nH}$ .
- $R_N, R_P = 5 \Omega$ .
- $C_N = 0.4 \text{ pF}$ .
- $C_P = 0.1 \text{ pF}$ .

## Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol	Min	Max	Unit
Operating Temperature Range	T <sub>A</sub>	-40	85	°C
Storage Temperature Range	T <sub>stg</sub>	-40	90	°C
Forward Voltage	V <sub>F</sub>	—	0	V
Reverse Voltage*	V <sub>R</sub>	—	30	V
Photocurrent	—	—	4	mA

\* The recommended reverse bias voltage is 5 V to 15 V.

## Handling Precautions

### Electrostatic Discharge

**CAUTION: This device is susceptible to damage as a result of electrostatic discharge. Take proper precautions during both handling and testing. Follow guidelines such as JEDEC Publication No. 108-A (Dec. 1988).**

Although protection circuitry is designed into the device, take proper precautions to avoid exposure to ESD.

## Electrical Characteristics

T<sub>C</sub> = 25 °C. Determined with a 50 Ω load.
