

HORIZONTAL DEFLECTION POWER TRANSISTORS

...specifically designed for use in larg screen color deflection circuits.

FEATURES:

- * High Voltage: $V_{CBO} = 1500V$
- * Low Saturation Voltage : $V_{CE(sat)} = 5.0V(Typ.) @ I_C = 3.0 A$
- * High Speed : $t_r = 1.0 us(Max.) @ I_{CP} = 3.0 A, I_{B1} = 0.8A$
- * Built-in Damper Type
- * Glass Passivated Collector-Base Junction

ACTIVE-REGION SAFE OPERATING AREA (SOA)

COLLECTOR SATURATION REGION

There are two limitation on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate I_c - V_{CE} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of SOA curve is base on $T_{J(PK)}=150^\circ\text{C}$; T_C is variable depending on conditions. second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(PK)}\leq 150^\circ\text{C}$. At high case temperatures, thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
