DAC-08

Specifications and Applications Information

HIGH SPEED 8-BIT MULTIPLYING D-TO-A CONVERTER

The DAC-08 series is a monolithic 8-bit high speed multiplying digital-to-analog converter, capable of settling to within 1/2 LSB (0.19%) in 85 ns. Monotonic multiplying performance is retained over a wide 40-to-1 reference current range. Full scale and reference currents are matched to within 1 LSB, therefore eliminating the need for full scale trim in most applications.

Dual complementary current outputs with high voltage compliance provide added versatility and allow differential mode of operation to effectively double the peak-to-peak output swing. In many applications, output current-to-voltage conversion can be accomplished without requiring an external op amp. Noise-immune inputs permit direct interface with TTL and DTL levels when the logic threshold control, VLC, (Pin 1) is grounded. All other logic family thresholds are attainable by adjusting the voltage level of Pin 1. Performance characteristics are virtually unchanged over the entire ± 4.5 V to ± 18 V power supply range. Power consumption is typically 33 mW with ± 5.0 V supplies.

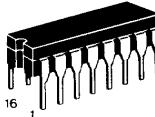

The DAC-08 is available in several versions, with nonlinearity as tight as $\pm 0.1\%$ ($\pm 1/4$ LSB) over temperature. All versions are guaranteed monotonic over 8 bits. For an extra margin of performance, Motorola utilizes thin-film resistors permitting very accurate resistive values which are extremely stable over temperature.

High performance characteristics along with low cost, make the DAC-08 an excellent selection for applications such as CRT displays, waveform generation, high-speed modems, and high-speed analog-to-digital converters.

- Fast Settling Time — 85 ns
- Full Scale Current Prematched to ± 1 LSB
- Nonlinearity Over Temperature to $\pm 0.1\%$ Max
- Differential Current Outputs
- High Voltage Compliance Outputs — 10 V to +18 V
- Wide Range Multiplying Capability
- Inputs Compatible With TTL, DTL, CMOS, PMOS, ECL, HLT
- Low Full Scale Current Drift
- Wide Power Supply Range ± 4.5 V to ± 18 V
- Low Power Consumption
- Thin-Film Resistors
- Low Cost
