1 MAIN FEATURES

ITEM	CONTENTS
Screen Size	4.0" Diagonal
Display Format	480 x RGB x 800 Dots
N° of Colour	65K/262K/16.7M
Active Area	51.84 mm (H) x 86.4 mm (V)
LCD Type	TFT
Mode	IPS Transmissive / Normally Black
Viewing Direction	Full view
Interface	3-SPI+ 16/18/24 RGB interface
Driver IC	IL19806E
Backlight Type	LED
Operating Temperature	-20°C ~ +70°C
Storage Temperature	-30°C ~ +80°C
RoHS compliant	Yes

3 ELECTRICAL SPECIFICATION

3.1 ABSOLUTE MAXIMUM RATINGS

Item	Symbol	Condition	Min	Max	Unit	Note
Power Supply Voltage	VCI	Ta=25°C	-0.3	5.0	V	
Operating Temperature	ТОР		-20	70	°C	1
Storage Temperature	TST		-30	80	°C	1,2,3

- Note 1. 90 % RH Max for Ta<50 °C, and 60% RH for Ta≥50°C.
- Note 2. In case of below 0°C, the response time of liquid crystal (LC) becomes slower and the colour of panel becomes darker than normal one. Level of retardation depends on temperature, because of LC's characteristic.
- Note 3. Only operation is guaranteed at operating temperature. Contrast, response time, another display quality are evaluated at +25°C.

3.2 DC ELECTRICAL CHARACTERISTICS

Item	Symbol	Condition	Min	Тур	Max	Unit	Note
Supply Voltage	VCI		3.0	3.3	4.2	V	
Input Voltage for Logic	VIH		0.7VCI	-	VCI	V	
Input Voltage for Logic	VIL		GND	-	0.3VCI	V	
Output Voltage for Logic	VOH		VCI-0.4	-	-	V	
Output Voltage for Logic	VOL		GND	-	GND+0.4	V	
Current Consumption	ICC		-	30		mA	1

Note 1: The specified power consumption is under the conditions of VCI=3.3V, FV=60Hz.

ı	Product No.	DET040WVNMNT0S-2A	REV. 1.0	Page	7 / 25

3.3 INTERFACE PIN ASSIGNMENT

3.3.1 LCM PIN ASSIGNMENT

Pin NO.	Symbol	Function
1	YU (NC)	
2	XR (NC)	
3	YD (NC)	
4	XL (NC)	
5	GND	Ground
6	GND	Ground
7	VCI	Analogue nower cupply 2.2V
8	VCI	Analogue power supply, 3.3V.
9-32	DB23-DB0	Data bus PINS -RGB data bus used. 16-bit bus: use DB20-DB16,DB13-DB8,DB4-DB0 18-bit bus: use DB21-DB16,DB13-DB8,DB5-DB0 24-bit bus: use DB23-DB0 If not used PINS, please must connect to GND.
33-36	NC	
37	RESET	Reset pin, Setting either pin low initializes the LSI. Must be rest after power is supplied.
38	cs	Chip select signal. Low: chip can be accessed; High: chip cannot be accessed.
39	NC	
40	SCL	Serial clock input

Product No.	DET040WVNMNT0S-2A	REV. 1.0		Page	8 / 25	l
-------------	-------------------	----------	--	------	--------	---

Pin NO.	Symbol	Function
41	NC	
42	PCLK	Dot clock signal
43	VSYNC	Frame synchronizing signal.
44	HSYNC	Frame synchronizing signal.
45	DE	Data enable signal.
46	SDO	Serial data output pin used for the SPI interface.
		Leave the pin to open when not in use.
47	SDI	Serial data input pin used for SPI interface
48	NC	NC
49	LEDA	Anode pin of backlight
50	LEDK	Cathode pin of backlight

3.4 TIMING CHARACTERISTICS

3.4.1 Display Serial Interface Timing Characteristics (3-line SPI system)

Signal	Symbol	Parameter	min	max	Unit	Description
	tcss	Chip select time (Write)	15	-	ns	
CSX	tcsh	Chip select hold time (Read)	15	-	ns	
	tchw	CS "H" pulse width	40	-	ns	
	twc	Serial clock cycle (Write)	30	-	ns	
	twrh	SCL "H" pulse width (Write)	10	-	ns	
SCL	twrl	SCL "L" pulse width (Write)	10	-	ns	
SCL	trc	Serial clock cycle (Read)	150	-	ns	
	trdh	SCL "H" pulse width (Read)	60	-	ns	
	trdl	SCL "L" pulse width (Read)	60	-	ns	
SDA/SDO	tacc	Access time (Read)	10	100	ns	For maximum CL=30pF
(Output)	toh	Output disable time (Read)	15	100	ns	For minimum CL=8pF
SDA/SDI	tds	Data setup time (Write)	10	-	ns	
(Input)	tdh	Data hold time (Write)	10	-	ns	

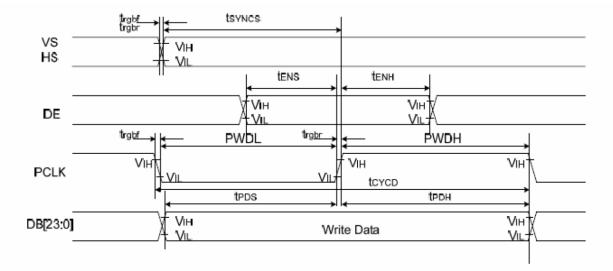

Note:

- 1. Ta = -30 to 70 °C, IOVCC=1.65V to 3.6V, VCI=2.5V to 3.6V, T=10+/-0.5ns.
 - 2. Does not include signal rise and fall times.

Product No.	DET040WVNMNT0S-2A	REV. 1.0		Page	10 / 25	
-------------	-------------------	----------	--	------	---------	--

3.4.2 Parallel 24/18/16 – bit RGB Interface Timing Characteristics

Signal	Symbol	Parameter		max	Unit	Description
VS/	t _{SYNCS}	VS/HS setup time	5	-	ns	
HS	tsynch	VS/HS hold time	5	-	ns	
DE	tens	DE setup time	5	-	ns	
DE	t _{ENH}	DE hold time	5	-	ns	
DB[23:0]	teos	Data setup time	5	-	ns	24/18/16-bit bus RGB
DB[23.0]	t _{PDH}	Data hold time	5	-	ns	interface mode
	PWDH	PCLK high-level period	13	-	ns	
PCLK	PWDL	PCLK low-level period	13	-	ns	
FOLK	toyop	PCLK cycle time	28	-	ns	
	t _{robr} , t _{robf}	PCLK,HS,VS rise/fall time	-	15	ns	

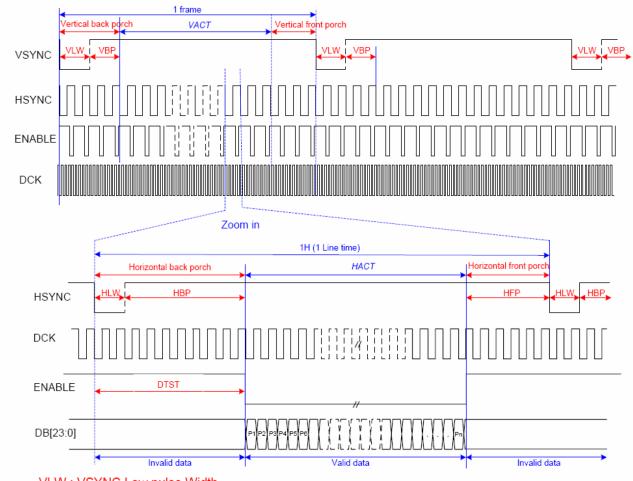

Note: Ta = -30 to 70 °C, IOVCC=1.65V to 3.6V, VCI=2.5V to 3.6V, DGND=0V

Product No.	DET040WVNMNT0S-2A	REV. 1.0	
-------------	-------------------	----------	--

3.4.3 DPI interface Timing

The timing chart of 24-/18-/16-bit DPI (RGB) interface mode is illustrated in Figure.

VLW: VSYNC Low pulse Width HLW: HSYNC Low pulse Width DTST: Data Transfer Startup Time Pn: pixel 1, pixel 2..., pixel n.

Parameter	Symbols	Condition	Min.	Тур.	Max.	Units
Frame Rate	FR		54		66	fps
Horizontal Low Pulse width	HLW		1		-	DOTCLK
Horizontal Back Porch	HBP		2		126	DOTCLK
Horizontal Address	HACT			480		DOTCLK
Horizontal Front Porch	HFP		2		-	DOTCLK
Vertical Low Pulse width	VLW		1		126	Line
Vertical Back Porch	VBP		1		126	Line
Vertical Address	VACT				864	Line
Vertical Front Porch	VFP		1		255	Line
Data Clock	DCLK		16.6		41.7	MHz

Product No.	DET040WVNMNT0S-2A	REV. 1.0	Page	12 / 25	

3.5 RESET TIMING CHARACTERISTICS

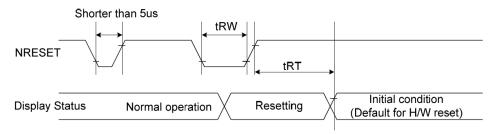

Figure 102 Reset Timing

Table 41 Reset Timing

Signal	Symbol	Parameter	Min	Max	Unit
	tRW	Reset pulse duration	10		us
RESX	tRT Reset cancel	Denot sensel		5(note 1,5)	ms
			120 (note 1,6,7)	ms	

Note:

- The reset cancel includes also required time for loading ID bytes, VCOM setting and other settings from OTP to registers. This loading is done every time when there is H/W reset cancel time (tRT) within 5 ms after a rising edge of RESX.
- 2. Spike due to an electrostatic discharge on RESX line does not cause irregular system reset according to the Table 43.

Table 42 Reset Descript

RESX Pulse	Action
Shorter than 5us	Reset Rejected
Longer than 9us	Reset
Between 5us and 9us	Reset starts

- 3. During the Resetting period, the display will be blanked (The display is entering blanking sequence, which maximum time is 120 ms, when Reset Starts in Sleep Out mode. The display remains the blank state in Sleep In mode.) and then return to Default condition for Hardware Reset.
- 4. Spike Rejection also applies during a valid reset pulse as shown below:

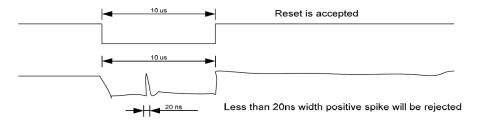

Figure 103 Positive Noise Pulse during Reset Low

- 5. When Reset applied during Sleep In Mode.
- 6. When Reset applied during Sleep Out Mode.
- 7. It is necessary to wait 5msec after releasing RESX before sending commands. Also Sleep Out command cannot be sent for 120msec.

Product No.	DET040WVNMNT0S-2A	REV. 1.0	Page	14 / 25	İ

4.1.1 Test Method

Note	Item	Test method
1	Setup	The display should be stabilised at a given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilise the luminance, measurements should be executed after lighting the backlight for 30 minutes in a windless room. Display Center of the Screen Photometer (TOPCONBM-7 Fast) Field of View = 22 Light Shield Room (Ambient Luminance < 1 lux)
2	Response time	Measure output signal waveform by the luminance meter when raster of window pattern is changed from white to black and from black to white. White White 100% 90% Black TOTAL
3	Contrast ratio	Measure maximum brightness and minimum brightness at the centre of the screen by displaying raster or window pattern. Then calculate the ratio between these two values. Contrast Ratio (CR) = Brightness of unselected position (white) Brightness of selected position (black)
4	Viewing angle Horizontal θ Vertical Ø	Move the luminance meter from right to left and up and down and determinate the angles where contrast ratio is 10 $\theta = \phi = 0^{\circ}$
5	Colour chromaticity	Measure chromaticity coordinates x and y of CIE1931 colorimetric system
6	Centre brightness	Measure the brightness at the centre of the screen
7	Brightness distribution	(Brightness distribution)= 100 x B/A % A: max. brightness of the 9 points B: min. brightness of the 9 points

Product No. DET040WVNMNT0S-2A REV. 1.0 Page 15 / 25

5 BACKLIGHT SPECIFICATION

5.1 LED DRIVING CONDITIONS

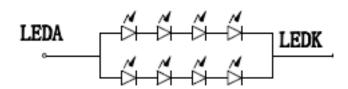

The back light system is edge-lighting type with 8 chips White LED

Item	Symbol	Condition	Min	Тур	Max	Unit
Forward Current	IF	Ta=25 °C,	30	40	-	mA
Forward Voltage	VF	Ta= 25°C,	1	12.8	-	V

Note:

- The lifetime of the LED is defined as a period till the brightness of the LED decreases to the half of its initial value.
- This figure is given as a reference purpose only, and not a guarantee.
- This figure is estimated for an LED operating alone.
 The performance of an LED may differ when assembled as a monitor together with a TFT panel due to different environmental temperature.
- Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

5.2 LED CIRCUIT

6 QUALITY ASSURANCE SPECIFICATION

6.1 DELIVERY INSPECTION STANDARDS

6.1.1 Inspection Conditions

Inspection distance: 30 cm ± 2 cm

Viewing angle: ±45°

6.1.2 Environmental Conditions

Ambient temperature: $23^{\circ}\text{C} \pm 5^{\circ}\text{C}$ Ambient humidity: $55\pm 10\% \text{ RH}$ Ambient illumination: $1000^{\sim}1500 \text{ lux}$

6.1.3 Sampling Conditions

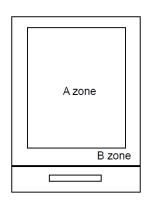

1. Lot size: quantity of shipment lot per model

2. Sampling method:

	Compling Dian	ANSI / ASQC Z1.4-1993	
	Sampling Plan	Normal inspection, Single Sampling	
401	Major Defect	0.65%	
AQL	Minor Defect	1.5%	

6.1.4 Definition of Area

A zone: active area B zone: viewing area

6.1.5 Basic Principle

A set of sample to indicate the limit of acceptable quality level shall be discussed should a dispute occur.

Product No. DET040WVNMNT0S-2A REV. 1.0 Page 17 / 25

23 / 25

6.1.7 Classification of Defects

Visual defects (except no or wrong label) are treated as minor defects, while electrical defects are treated as major defects.

Two minor defects are equal to one major defect in lot sampling inspection.

6.1.8 Identification / marking criteria

Any unit with illegible / wrong / double or no marking / label shall be rejected.

6.2 DEALING WITH CUSTOMER COMPLAINTS

6.2.1 Non-conforming analysis

Purchaser should supply Densitron with detailed data of non-conforming sample. After accepting it, Densitron should complete the analysis in two weeks from receiving the sample.

If the analysis cannot be completed on time, Densitron must inform the purchaser.

6.2.2 Handling of non-conforming displays

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron.

Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear.

Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

Product No.	DET040WVNMNT0S-2A	REV. 1.0	Page	l

7 RELIABILITY SPECIFICATION

7.1 RELIABILITY TESTS

	Test Item	Test Condition		
	High Temperature Storage	Ta= 80°C	96h	
	Low Temperature Storage	Ta=-30°C	96h	
	Temperature Cycle Storage	-20°C ← → 70°C ON/OFF, 20 cycles. ON time over 1 seconds ,OFF time over 10 seconds		
	High Temperature Operation	Tp= 60°C	96h	
Durability Test	Low Temperature Operation	Tp= -20°C	96h	
it	High Temperature & Humidity	Tp= 40°C RH	= 90% 96h	
rab	Operation	Non condensin	ng	
nd	Thermal Shock Resistance	The sample should be allowed to stand the following 5 cycles of operation: TSTL for 30 minutes -> normal temperature for 5 minutes -> TSTH for 30 minutes -> normal temperature for 5 minutes, as one cycle, then taking it out and drying it at normal temperature, and allowing it stand for 24 hours		
	Box Drop Test	1 Corner 3 Edges 6 faces, 66 cm (Medium Box)		

Note: Ta=ambient temperature Tp= Panel temperature

Notes:

- 1. No dew condensation to be observed.
- 2. The function test shall be conducted after 4 hours storage at the normal temperature and humidity after removed from the test chamber.
- 3. No cosmetic or functional defects should be allowed.
- 4. Total current consumption should be less than twice the initial value.

8 HANDLING PRECAUTIONS

Safety

If the LCD panel breaks, be careful not to get the liquid crystal fluid in your mouth or in your eyes. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and plenty of water.

Mounting and Design

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

When assembling with a zebra connector, clean the surface of the pads with alcohol and keep the surrounding air very clean.

Design the system so that no input signal is given unless the power supply voltage is applied.

Caution during LCD cleaning

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotriflorothane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface. Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

Caution against static charge

As the display uses C-MOS LSI drivers, connect any unused input terminal to VDD or VSS. Do not input any signals before power is turned on. Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

Packaging

Displays use LCD elements, and must be treated as such. Avoid strong shock and drop from a height. To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

Caution during operation

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life. Direct current causes an electrochemical reaction with remarkable deterioration of the display quality. Give careful consideration to prevent direct current during ON/OFF timing and during operation. Response time is extremely delayed at temperatures lower than the operating temperature range while, at high temperatures, displays become dark. However, this phenomenon is reversible and does not mean a malfunction or a display that has been permanently damaged. If the display area is pushed on hard during operation, some graphics will be abnormally displayed but returns to a normal condition after turning off the display once. Even a small amount of condensation on the contact pads (terminals) can cause an electro-chemical reaction which causes missing rows and columns. Give careful attention to avoid condensation.

Storage

Store the display in a dark place where the temperature is $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$ and the humidity below 50%RH. Store the display in a clean environment, free from dust, organic solvents and corrosive gases.

Do not crash, shake or jolt the display (including accessories).
