

DFPCOMP

Floating Point Comparator Unit

ver 2.10

www.DataSheet4U.com

OVERVIEW

The DFPCOMP compares two arguments. The input numbers format is according to IEEE-754 standard. DFPCOMP supports single precision real numbers. Compare operation was pipelined up to 1 level. Input data are fed every clock cycle. The first result appears after 1 clock period latency and next results are available **each clock** cycle. Full IEEE-754 unordered compare function is included.

APPLICATION

- Math coprocessors
- DSP algorithms
- Embedded arithmetic coprocessor
- Data processing & control

KEY FEATURES

- Full IEEE-754 compliance
- Single precision real format support
- Simple interface
- No programming required
- 1 level pipeline
- Results available at every clock
- Fully configurable
- Fully synthesizable, static synchronous design with no internal tri-states

DELIVERABLES

- ◆ Source code:
 - ◇ VHDL Source Code or/and
 - ◇ VERILOG Source Code or/and
 - ◇ Encrypted, or plain text EDIF netlist
- ◆ VHDL & VERILOG test bench environment
 - ◇ Active-HDL automatic simulation macros
 - ◇ NCSim automatic simulation macros
 - ◇ ModelSim automatic simulation macros
 - ◇ Tests with reference responses
- Technical documentation
 - ◇ Installation notes
 - ◇ HDL core specification
 - ◇ Datasheet
- ◆ Synthesis scripts
- ◆ Example application
- ◆ Technical support
 - ◇ IP Core implementation support
 - ◇ 3 months maintenance
 - Delivery the IP Core updates, minor and major versions changes
 - Delivery the documentation updates
 - Phone & email support

LICENSING

Comprehensible and clearly defined licensing methods without royalty fees make using of IP Core easy and simply.

Single Design license allows using IP Core in single FPGA bitstream and ASIC implementation. It also permits FPGA prototyping before ASIC production.

All trademarks mentioned in this document are trademarks of their respective owners.

<http://www.DigitalCoreDesign.com>
<http://www.dcd.pl>

Unlimited Designs license allows using IP Core in unlimited number of FPGA bitstreams and ASIC implementations.

In all cases number of IP Core instantiations within a design, and number of manufactured chips are unlimited. There is no time of use limitations.

- Single Design license for
 - VHDL, Verilog source code called HDL Source
 - Encrypted, or plain text EDIF called Netlist
- Unlimited Designs license for
 - HDL Source
 - Netlist
- Upgrade from
 - Netlist to HDL Source
 - Single Design to Unlimited Designs

SYMBOL

PINS DESCRIPTION

PIN	TYPE	DESCRIPTION
clk	Input	Global system clock
rst	Input	Global system reset
en	Input	Enable computing
adatai[31:0]	Input	A data bus input
bdatai[31:0]	Input	B data bus input
gto	output	A>B output
eqo	output	A=B output
lto	output	A<B output
ifo	output	Invalid result flag

BLOCK DIAGRAM

Arguments Checker - performs input data analyze against IEEE-754 number standard compliance. The appropriate numbers and information about the input data classes are given as the results to Main FP Pipelined Unit.

Main FP Pipelined Unit - performs floating point compare function. Gives the complex information about the results and makes final flags settings.

PERFORMANCE

The following table gives a survey about the Core area and performance in the ALTERA® devices after Place & Route :

Device	Speed grade	Logic Cells	F _{max}
FLEX10KE	-1	83	81 MHz
ACEX1K	-1	83	82 MHz
APEX20K	-1	79	60 MHz
APEX20KE	-1	79	76 MHz
APEX20KC	-7	79	98 MHz
APEX-II	-7	79	118 MHz
MERCURY	-5	85	178 MHz
STRATIX	-5	82	152 MHz
CYCLONE	-6	81	140 MHz
STRATIX-II	-3	66	225 MHz
CYCLONE -II	-6	81	141 MHz

Core performance in ALTERA® devices

CONTACTS

For any modification or special request please contact to Digital Core Design or local distributors.
