PRELIMINARY

## Introduction

The DM5960 is a 1-channel video decoder designed for cameras with Sony's new 960H CCD sensor. The DM5960 converts 9/6.5 MHz analog CVBS signals to digital 36/27 MHz CCIR656 signals. The DM5960 integrates an internal PLL, and decodes both 960H and 720H videos using the same (27MHz) external clock source. The DM5960 also features a patented fast switch function. With the fast switch function, the DM5960 can decode up to 2 analog CVBS with little frame rate loss.

## Features

### Video Decoder

- Accepts NTSC (M), PAL (B, D, G, H, I, M, Nc) and SONY 960H CCD Camera
- Video decoder could be programmed to operate at 27 or 36MHz.
- Hardware Fast Switch function
- Fast Switch also controllable by software or external pin
- Software channel ID in active region
- 10-bits video ADCs with built in 9/6.5 MHz analog low pass filter
- Automatic gain control for Luminance and Chrominance
- Programmable brightness, contrast, saturation, hue, and sharpness
- 5-H comb filter for YC separation
- Support video interface YCbCr 4:2:2, 4:1:1, 4:2:0 format
- Support mirror function
- Chrominance line filter for PAL phase error
- DLL for video synchronization, supports 27MHz crystal within +/-1000 ppm variance
- Advanced video synchronization for weak and noisy CVBS. Supports video signal transmitted by 500-meter long cable
- Support line lock camera

### Miscellaneous

- Use a single external 27MHz crystal to support both 960H and 720H video
- One programmable PLL integrated
- Slave I2C bus
- Ultra low power consumption. Under 150mW for normal operation. Under 50mW for suspend mode.
- 32-pin LQFP (5mmx5mm) or 32-pin QFN (4mmx4mm) package
- 1.8V core power, 3.3V analog power and 1.8V analog power

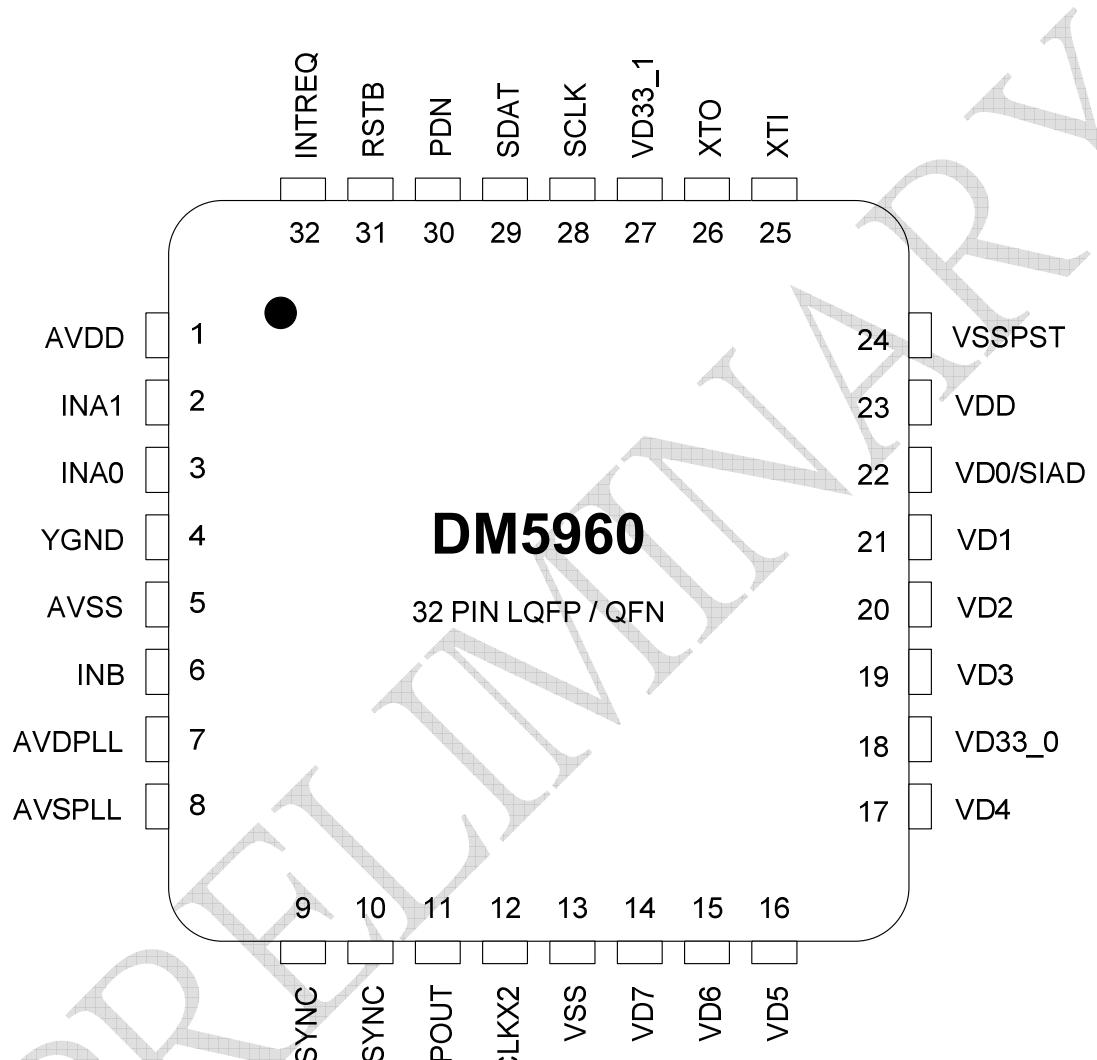

### Applications

Suggested applications include

- DVR
- Car DVR
- Video capture card

PRELIMINARY

## Terminal Assignment

## Terminal Functions

Pin Name	Pin number	Type	Description
<b>Analog Video Signals</b>			
INA0	3	A	Analog input A0.
INA1	2	A	Analog input A1.
YGND	4	G	Analog ground. (used as signal input reference)
INB	6	A	Analog input B. (analog chroma input)

Pin Name	Pin number	Type	Description
<b>Video Output Signals</b>			
H SYNC	10	O	Horizontal Sync and multi-purpose output. See register for control information.
V SYNC	9	O	Vertical Sync and multi-purpose output. See register for control information.
CLKX2	12	O	Data output clk.
MPOUT	11	O	Multi-purpose output pin. See register for control information.
VD7,VD6,VD5, VD4,VD3,VD2, VD1	14,15,16,17, 19,20,21	I/O	Digital Video data output of 4:2:2 YCbCr[7:1]. VD[7] is the MSB
VD0/SIAD	22	I/O	Digital Video data output of 4:2:2 YCbCr. SIAD: The i2c interface address select pin 0. Default pull-down device ID: 8'hB8 otherwise device ID is 8'hBA

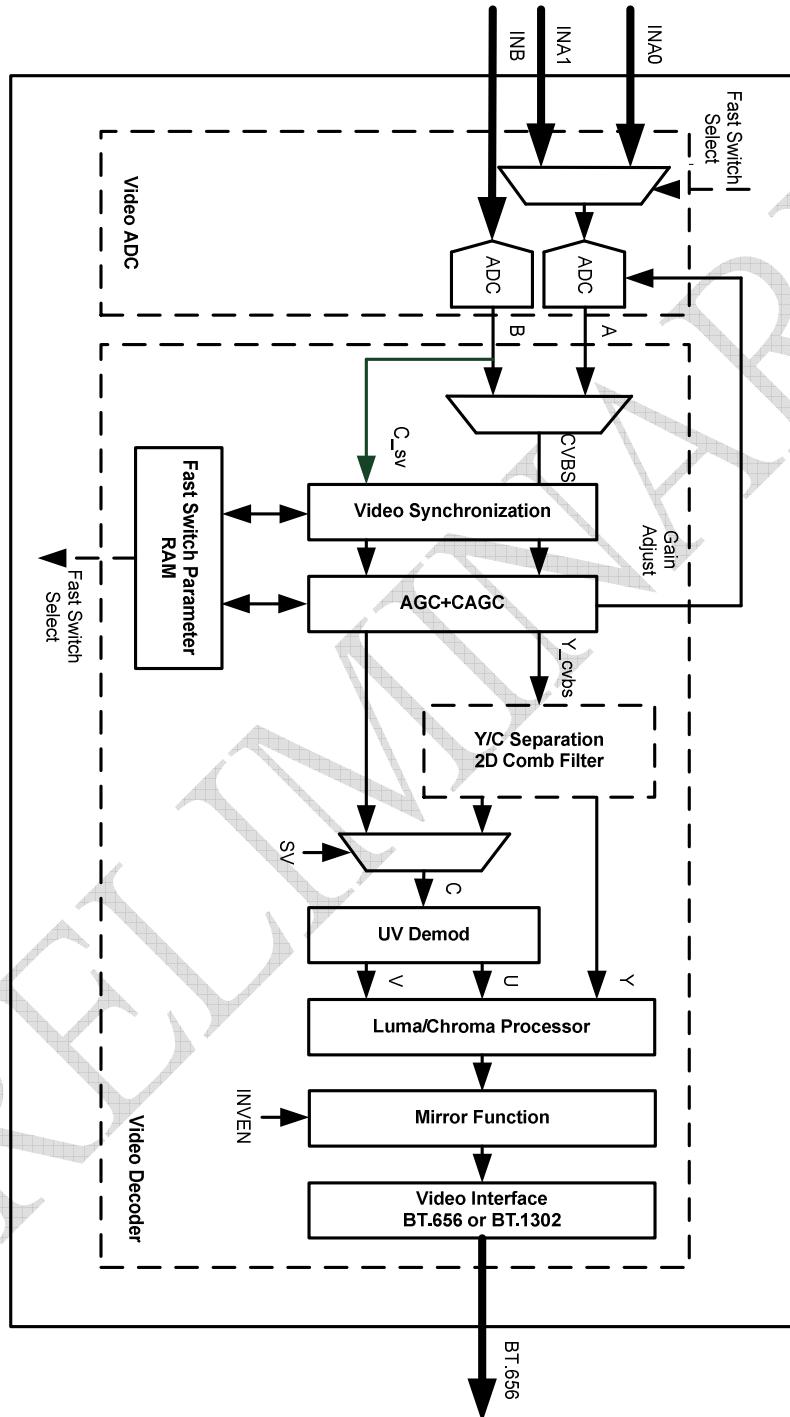

Pin Name	Pin number	Type	Description
<b>Clock signals</b>			
XTI	25	I	Clock input. A 27 MHz fundamental crystal or a single-ended oscillator can be connected
XTO	26	O	Clock output. For connecting a crystal

Pin Name	Pin number	Type	Description
<b>General Signals</b>			
RSTB	31	I	Reset input. Low active
PDN	30	I	Power down control pin. # is high active
INTREQ	32	O	Interrupt output signal

Pin Name	Pin number	Type	Description
<b>Host Interface</b>			
SCLK	28	I	The I2C serial interface Clock line.
SDAT	29	I/O	The I2C serial interface Data line.

Pin Name	Pin number	Type	Description
<b>Power and Ground Pins</b>			
VDD	23	P	1.8V digital core power
VSS	13	G	1.8V digital ground
VD33_0	18	P	3.3V digital I/O power
VD33_1	27	P	3.3V digital I/O power
VSSPST	24	G	3.3V digital I/O ground
AVDD	1	P	1.8V analog supply ADC.
AVSS	5	G	Analog ground.
AVDPLL	7	P	1.8V analog supply PLL
AVSPLL	8	G	Analog ground PLL

## Block Diagram

## Introduction

The DM5960 video decoder contains a Video Synchronization block, an AGC block, an YC separation block, a UV Demodulation block, a Luma/Chroma Processor block, a Mirror Function block and a BT 656 output block. A patented Fast Switch is also included.

In addition to CVBS, the DM5960 video decoder supports S-Video as well.

## Video Synchronization

Video Synchronization performs video detection function. It automatically detects NTSC(M), NTSC(443), PAL(B,D,G,H,I), PAL(M), PAL(N), PAL(60). A smart video detection algorithm has been adopted. Therefore the DM5960 can perform fast and stable video synchronization even if the input signal is weak or the external crystal is with error as large as +/- 1000 ppm.

## Automatic Gain Control

Automatic Gain Control (AGC) block performs both Luma AGC and Chroma AGC (CGAC). After video synchronization, Luma AGC adjusts input Luma level to the standard level (1Vpp). A further CAGC is performed after Luma AGC for signal with different Luma and Chroma attenuation.

## Y/C Separation

Y/C Separation is for CVBS input only. After this block CVBS signal is separated into Luma and Chroma components. A 5-H 2D comb filter is adapted in the Y/C separation block.

## UV demodulation

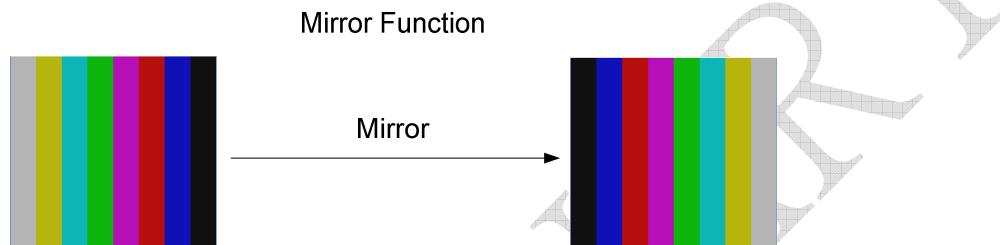

After Y/C separation, the UV demodulation block performs UV demodulation to the Chroma component. The phase and frequency of the UV demodulation is from a color burst subcarrier tracking block for both NTSC and PAL mode. A UV demodulation LPF is also adopted to filter out chroma noise.

## Luma/Chroma Processor

This block contains a programmable Luma sharpness filter. Hue, Saturation, Brightness and Contrast adjustment are also supported. The adjusted video is then transformed from YUV to YCbCr domain for CCIR656 output interface.

## Mirror Function

The DM5960 also supports mirroring function. When mirroring function is performed, the samples at each line are horizontally left-right flipped. The following figure illustrates the result of horizontal mirroring.

## Video Interface

The DM5960 video decoder supports 27MHz BT.656 (for 720H) and 36MHz BT.656-like (for 960H) video output format with BT.601 synchronization signals. It also supports YCbCr 4:1:1 and 4:2:0 formats. A horizontal cropping function also included in this block.

## Fast Switch Parameter RAM

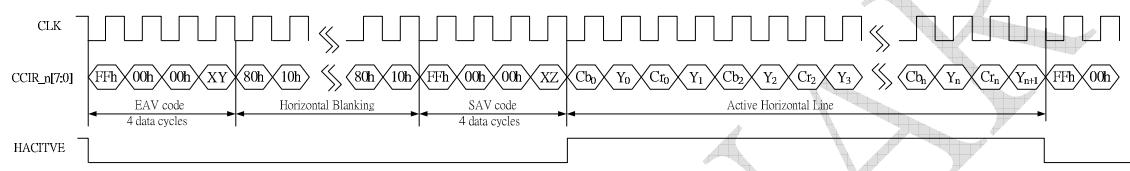

The DM5960 features a patented hardware video source fast switch function. The Fast Switch block has a table which stores video characteristic. Each time HW switches to a previously tracked video source it could complete video synchronization within several lines. With this feature, the DM5960 can decode up to 2 CVBS with little frame rate loss.

## Video Interface

The DM5960 outputs 27MHz CCIR656 with 720x480/720x576 resolution (conventional 720H), or outputs 36MHz CCIR656-like format (BT.1302) with 960x480/960x576 resolution (Sony 960H).

For these video outputs, SAV (Start of Active Video) and EAV (End of Active Video) are inserted to indicate active video interval. Each channel uses one output port to transmit video data, that is, luminance and chrominance data are transmitted through the same port. The output timing diagram is shown below.

### YCbCr 4:2:2

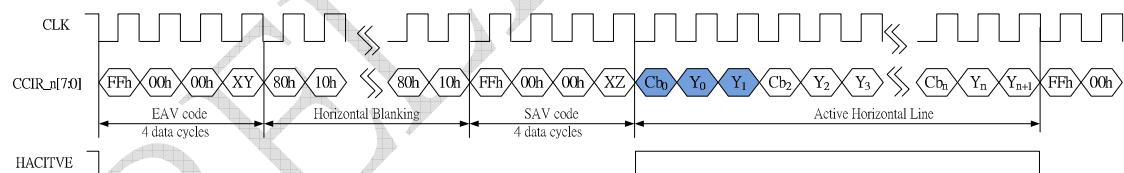

The number of data cycles in active horizontal line will vary according to the output YCbCr 4:2:2 format. For 720H video outputs, the active horizontal line contains 1440 cycles. For 960 H video outputs, the active horizontal line contains 1920 cycles.

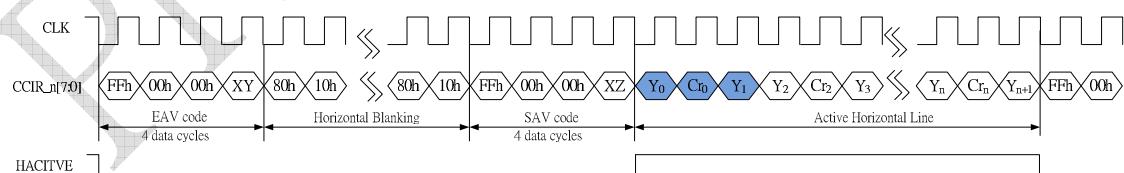

The DM5960 also supports the 4:2:0 and 4:1:1 format. The output timing diagram is shown below.

### YCbCr 4:2:0

Odd Line:

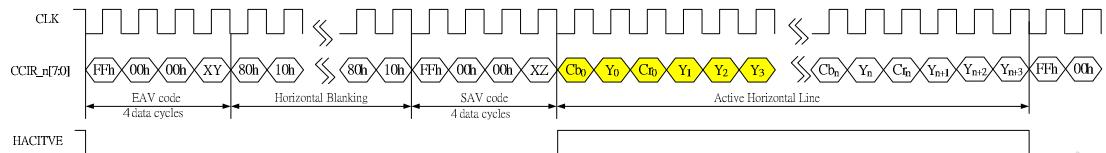

Even Line:

The number of data cycles in active horizontal line will vary according to the output YCbCr 4:2:0 format. For 720H video outputs, the active horizontal line contains 1080 cycles. For 960 H video outputs, the active horizontal line contains 1440 cycles.

### YCbCr 4:1:1

The number of data cycles in active horizontal line will vary according to the output YCbCr 4:1:1 format. For 720H video outputs, the active horizontal line contains 1080 cycles. For 960 H video outputs, the active horizontal line contains 1440 cycles.

SAV and EAV indicate the active video interval. The values of the first three bytes in SAV and EAV are invariant preamble: 0xFF, 0x00, and 0x00. Different values are designated to the last byte according to different conditions: Field, V time, and H time. The MSB of this byte is always set to 1 and it's followed by three bits to represent the condition of F, V, and H respectively. The last four bits are used as protection bits. The detailed code sequences of SAV and EAV are illustrated in the following table.

Condition			FVH Value			SAV/EAV Code Sequence			
Field	V time	H time	F	V	H	Byte 0	Byte 1	Byte 2	Byte 3
Odd	Active	SAV	0	0	0	0xFF	0x00	0x00	0x80
Odd	Active	EAV	0	0	1	0xFF	0x00	0x00	0x9D
Odd	Blank	SAV	0	1	0	0xFF	0x00	0x00	0xAB
Odd	Blank	EAV	0	1	1	0xFF	0x00	0x00	0xB6
Even	Active	SAV	1	0	0	0xFF	0x00	0x00	0xC7
Even	Active	EAV	1	0	1	0xFF	0x00	0x00	0xDA
Even	Blank	SAV	1	1	0	0xFF	0x00	0x00	0xEC
Even	Blank	EAV	1	1	1	0xFF	0x00	0x00	0xF1

## BT601 Synchronization Signals

External syncs are provided via the following signals

- VSYNC (vertical sync signal)
- HSYNC (horizontal sync signal)
- FID (field indicator)

VSYNC, HSYNC and FID are programmed to be the external syncs for BT.601. The default setting for a 525/625 line video output are given as an example below.

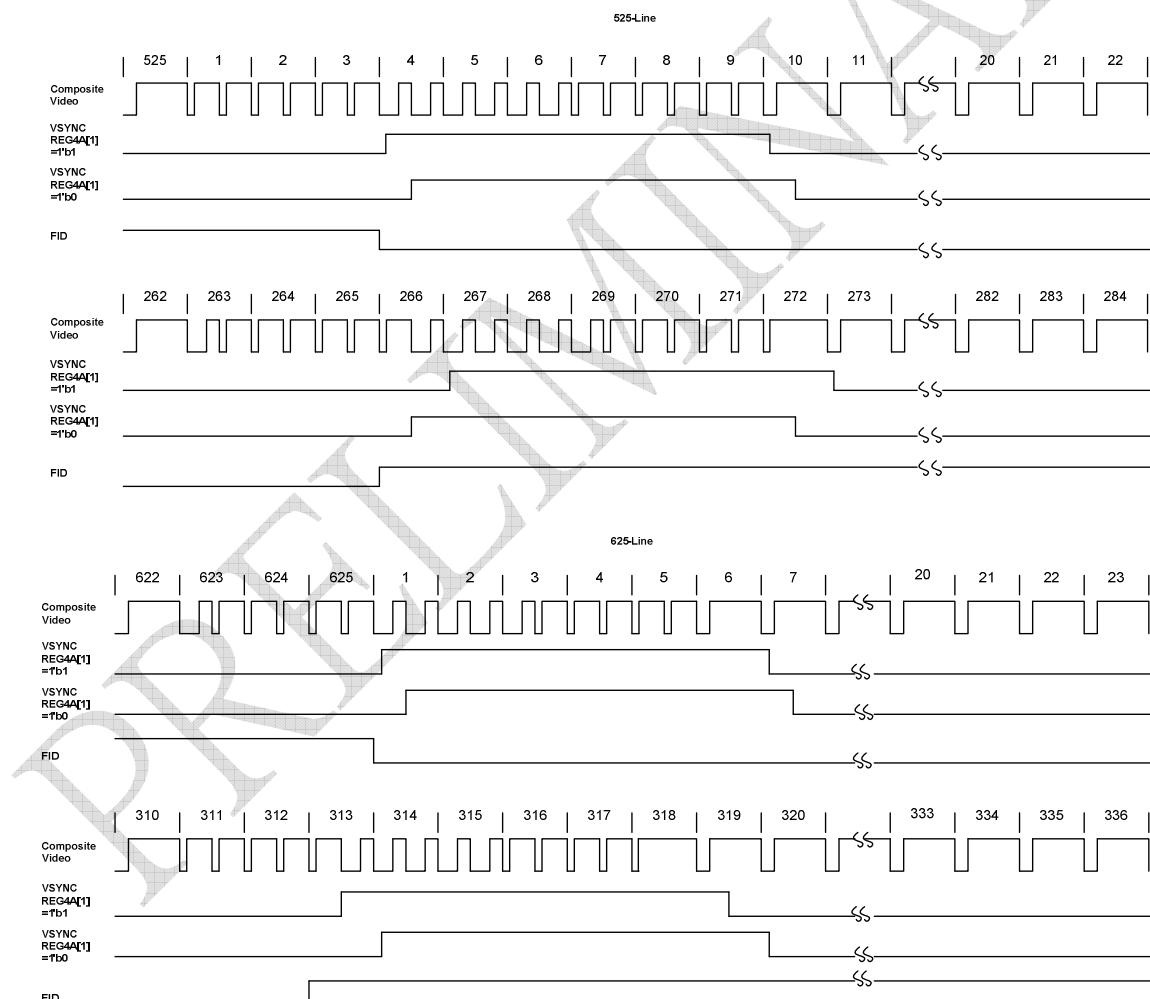

Fig: BT 601 Timing diagram

## PLL

The DM5960 has an internal PLL to generate the system and pixel clocks. A 27MHz or 36 MHz is required for the PLL.

The default PLL setting is shown in the following table.

	Crystal In clock (MHz)	PLL out (MHz)	Function
PLL1	27	72	System/pixel clock

PLL default operated clock

The PLL parameters for various system configurations are shown in the following table.

	Crystal(MHz)	PLL out(MHz)	M	N	OD
PLL1	27	72	62	4	2
	27	54	14	0	2
	36	72	14	0	2
	36	54	10	0	2

**Formula:**

$$\text{CLK\_OUT} = \text{XIN} * (\text{M}+2)/[(\text{N}+2)*\text{OD}*2]$$

Where CLK\_OUT: PLL output frequency

XIN: PLL input frequency.

M: The numerator of PLL formula.

[N, OD]: The denominator of PLL formula.

**Attention:**

1.  $100\text{MHz} \leq \text{CLK\_OUT} * \text{OD} \leq 250\text{MHz}$
2.  $1\text{MHz} \leq \text{XIN}/(\text{N}+2) \leq 25\text{MHz}$
3.  $\text{OD} \geq 1$

**Truth Table:**

PD	BP	OE	CLK_OUT
0	0	0	CLK_OUT
0	0	0	XIN
Don't Care	1	0	XIN
Don't Care	Don't Care	1	0
Other		Undefined	

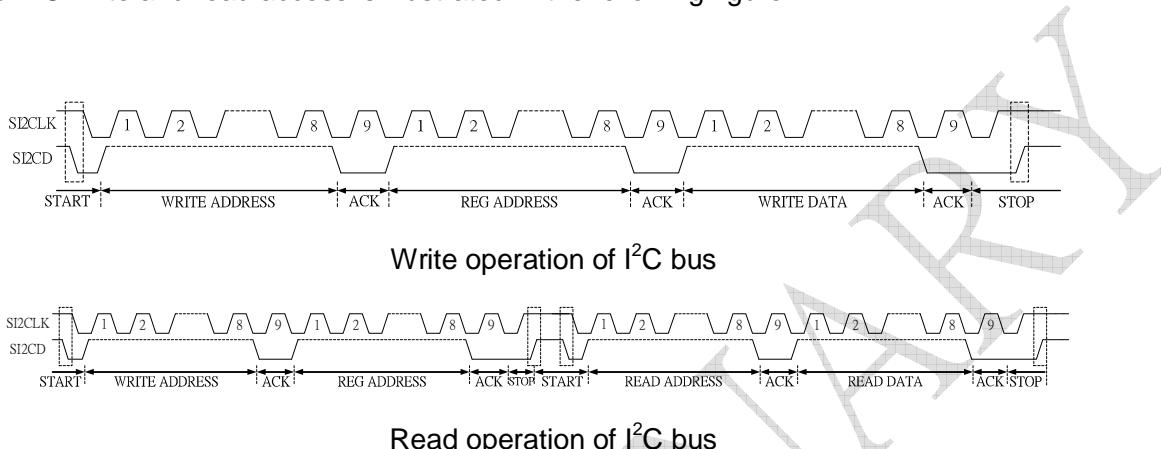

**PD:** Power down control; Active high.

**BP:** Bypass XIN to CLK\_OUT; Active high.

**OE:** CLK\_OUT enable pin, Active low.

## Host Interface

In the DM5960, I<sup>2</sup>C is used for setting configuration and parameters, for example, brightness, contrast, saturation, hue, and sharpness control. The typical timing diagram of I<sup>2</sup>C write and read access is illustrated in the following figure.

Write/Read Address							
Slave Address						R/W	
1	0	1	1	1	0	SIAD	0: Write; 1: Read

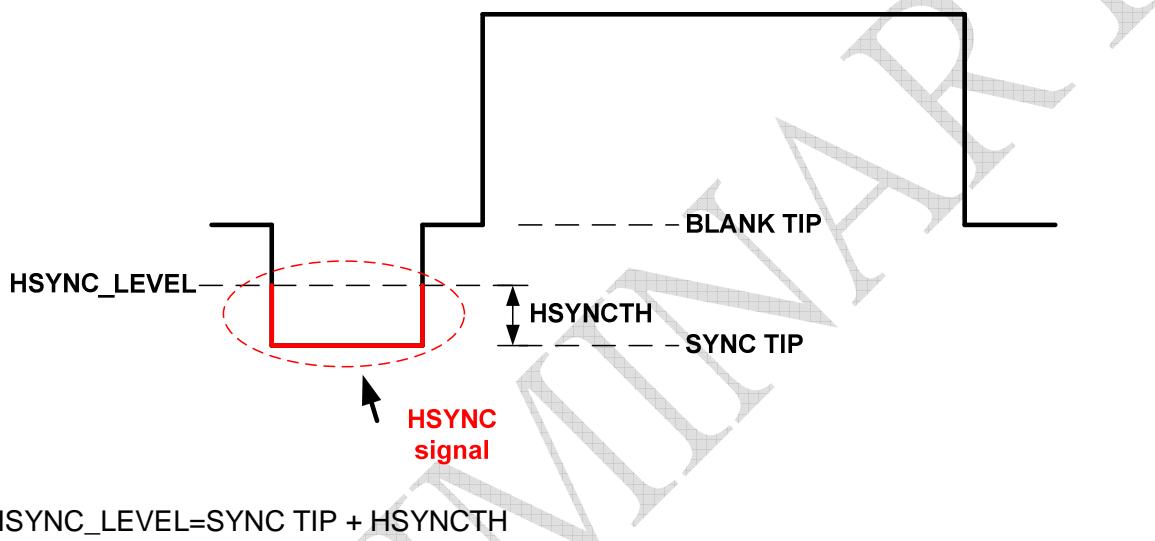

The external Pull-up/Pull-down resistor connected to the pin “VD0/SIAD” indicates the device address SIAD. When pull-up resistor is connected to the pin, it indicates SIAD with a high value. Otherwise when pull-down resistor is connected to the pin, it indicates SIAD with a low value.

	Write Address	Read Address
SIAD = 0	B8	B9
SIAD = 1	BA	BB

## Internal Control Registers

### Video Decoder

0	0	0	0	0	0	0	0
					<b>FIELD_I NV</b>	<b>FIELD_ONLY</b>	

**FIELD\_ONLY:** CCIR656 signal output field 0 only

**FIELD\_INV:** Inverse output CCIR656 signal field

**Address= 8'h35**

Chroma Average							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	1
<b>INVEN</b>						<b>CAVNTS CMD</b>	<b>CAVPAL MD</b>

**INVEN:** Mirror function enable. Set 1, enable mirror function.

See Pag.12

**CAVNTSCMD:** Set 1, enable NTSC mode Cb/Cr line average.

Set 0, disable.

**CAVPALMD:** Set 1, enable PAL mode Cb/Cr line average.

Set 0, disable.

**Address= 8'h36**

MASK CCIR656 LINE							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	1
						MASKA LL	PAL_MSK3

**PAL\_MSK3:** Set 1, it will mask field 0 and 1 last lines according to REG37

**MASKALL:** mask all active

**Address= 8'h37**

MASK LINE							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	3'h0			0	3'h0		
	MSK_LINE_F1				MSK_LINE_F0		

**MSK\_LINE\_F0:** When REG36[0] = 1, Mask Field 0 last number of active lines (0-7)

**MSK\_LINE\_F1:** When REG36[0] = 1, Mask Field 1 last number of active lines (0-7)

**Address= 8'h38**

MONO TH							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	0	0	5'h1f				
MONO_EN			MONO_TH				

**MONO\_TH:** MONO mode AGC threshold. AGC max value 30. when set MONO\_TH 31.

AGC will always less than MONO\_TH.

**MONO\_EN:** Set 0, when no valid color burst detected.

Output CCIR656 Y through Notch filter.

Set 1, when no valid color burst detected. Output CCIR656

Y through Notch filer if AGC\_GAIN>=MONO\_TH, otherwise output CCIR656 Y with ADC data.

When No valid color burst detected (color kill mode). Output CCIR656 Cb/Cr with 128 (no color).

**Address= 8'h39**

COLOR BURST DETECT							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	3'h4			4'h5			
CAGCT RACKE N	COLBSTCYC			COLBSTHSEL			

**COLBSTHSEL:** Color Burst detection threshold.

4'h0 :COLBsth = 0.125\*(BLANK TIP – SYNC TIP)

4'h1 :COLBsth = 0.25\*(BLANK TIP – SYNC TIP)

4'h2 :COLBsth = 0.375\*(BLANK TIP – SYNC TIP)

4'h3 :COLBsth = 0.5\*(BLANK TIP – SYNC TIP)

4'h4 :COLBsth = 0.09375\*(BLANK TIP – SYNC TIP)

4'h5 :COLBsth = 0.078125\*(BLANK TIP – SYNC TIP)

4'h6 :COLBsth = 0.0625\*(BLANK TIP – SYNC TIP)

4'h7 :COLBsth = 0.03125\*(BLANK TIP – SYNC TIP)

4'h8 :COLBsth = 0

When color burst peak to peak value larger than

COLBsthSEL, it's been considered a good color burst signal cycle

**COLBSTCYC:** When COLBSTCYC numbers of valid color bust cycle detected, VD will decode video with color and Color AGC will optionally started. Otherwise will enter color kill mode

**CAGCTRACKEN:** CAGC Track enable. Set 0 to disable CAGC track

**Address= 8'h3A**

CAGC							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	0	0	0	0	0	0	0
CAGCE N	CAGCL OCKOP	cagc_gain					

**cagc\_gain:** RO. Chroma gain value. [5:2] integer, [1:0] fractional. (max 15.75, min 1)

**CAGCLOCKOPT:** Set 1, enable color AGC tracking until CAGC gain stable.

Set 0, color AGC tracking for first 15 video decoded frames.

**CAGCEN :** Set 1, enable color AGC.

**Address= 8'h3B**

Line Lock Camera							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
1	0	0	0	0	0	0	0
CAMLO CKOPT	LOCKC AM_DET	HLOCK DET1	ACTSHIFT				

**ACTSHIFT:** Active region shift, 2's compliment (-16~15)

**HLOCKDET1:** Set 1, to enable auto-detect Line Lock camera.

**LOCKCAM\_DET:** RO, Line lock camera detected. (RO)

**CAMLOCKOPT:** Set 1, when line lock camera used.

**Address= 8'h3C**

LLOCKTH							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
8'h20							
LLOCKTH							

**LLOCKTH:** Line Lock auto detection threshold, valid only when 0x3B[5]=1.

When REG13[1]=1, line boundary difference within a field larger than LLOCKTH, Line Lock Camera detected.

Note: when clock offset tracking unstable and REG13[1]=1, line boundary difference might be large within a field.

**Address= 8'h3D**

VD_CFG							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	1	0	0	0	0	0	0
	ORSTO PT	OBFOV F	OBFUD F	LLFAR4 FSOPT1			LLFAR4 FSOPT

**LLFAR4FSOPT:** Set 1, decode video chroma without clock offset compensation.

Set 0, decode video chroma after clock offset compensation.

Set this bit to one for Line Lock Camera.

**LLFAR4FSOPT1:** Set 1, Auto adjust the active region related to clock offset.

When force line lock mode, set this bit to 1;

**OBFUDF:** RO. CCIR output buffer under flow.

**OBFOVF:** RO. CCIR output buffer over flow.

**ORSTOPT:** Set 1, Reset CCIR output buffer when output buffer overflow or underflow.

**Address= 8'h3D**

DROP FRAME							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
FRDROP							FRDRO PEN

**FRDRO PEN:** Frame drop enable. Set 1 to enable drop frame function.

**FRDROP:** Drop frame number:

Output Frame Rate =  $(1-1/\text{FRDROP}) * \text{Frame\_Rate}$  when  $\text{FRDROP} > 0$ .

NTSC mode Frame\_Rate = 30 frame/sec

PAL mode Frame\_Rate = 25 frame/sec

Ex. FREROPEN=1, FRDROP=2, NTSC mode;

Output Frame Rate =  $(1-1/2) * 30 \text{ frame/sec} = 15 \text{ frame/sec}$

**Address= 8'h3F**

OUT BUFFER							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
8'h1a							
OBFTH							

**OBFTH:** CCIR656 output buffer ready threshold.

Once CCIR656 output buffer count is larger than

OBFTH, starts output CCIR656 active region.

PS. CCIR656 output buffer max length is 48, set OBFTH around middle level of buffer length.

**Address= 8'h40**

CCIROUT TYP EN

**SW\_PLL\_MBISTTST:** Set 1, drive PLL&MBIST detail signal to chip IO pins.

**SW\_PLLBAPSEN:** Set 1, bypass internal pll out source.

**VADCTST\_SEL:** valid for VADCTSTEN and VADCBYPEN.

in VADCTSTEN case:

2'b0: Dout = DoutA,

2'b1: Dout = DoutB

2'b2: Dout = when clk27 high DoutA, clk27 low DoutB

**SW\_VADCTST:** Set 1, drive VADCSEL indicated ADC outputs to chip IO pins.

**SW\_VADCBYPASSEN:** Set 1, bypass ADC data in from I/O pins.

**Address= 8'h5B**

MBIST CONTROL							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
BISTGO					MBDON_E	MBERR_1	MBERR_0

**BISTGO:** Set 1 to start MBIST logic. HW auto clear this bit after MBIST done.

**MBDONE:** Set by HW, set 1 to clear.

**MBEER\_0:** when read back 1, sram broken, Set by HW, set 1 to clear.

**MBEER\_1:** when read back 1, sram broken, Set by HW, set 1 to clear.

**Address= 8'h5D**

CONFIG							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	3'h0			0	3'h0		
	DLYMUX_VCLK			OPCLK_INV	DLYMUX_PCLK		

**DLYMUX\_PCLK:** Selected PCLK delay time. (3'h0 is smallest, 3'h7 is longest )

**OPCLK\_INV:** Set 1 to inverse PCLK output.

**DLYMUX\_VCLK:** Selected pll\_54 delay time to vadc.

(3'h0 is smallest, 3'h7 is longest )

**Address= 8'h5F**

REVISION_ID							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
8'h3B							
REVISION_ID							

**REVISION\_ID:** RO, The DM5960 CHIP version ID.

## PLL

**Formula:**

$$\text{CLK\_OUT} = \text{XIN} * (\text{M}+2)/[(\text{N}+2)*\text{OD}*2]$$

Where CLK\_OUT: PLL output frequency

XIN: PLL input frequency.

M: The numerator of PLL formula.

[N, OD]: The denominator of PLL formula.

**Attention:**

1.  $100\text{MHz} \leq \text{CLK\_OUT} * \text{OD} \leq 250\text{MHz}$
2.  $1\text{MHz} \leq \text{XIN}/(\text{N}+2) \leq 25\text{MHz}$
3.  $\text{OD} \geq 1$

**Truth Table:**

PD	BP	OE	CLK_OUT
0	0	0	CLK_OUT
0	0	0	XIN
Don't Care	1	0	XIN
Don't Care	Don't Care	1	0
Other		Undefined	

**PD:** Power down control; Active high.

**BP:** Bypass XIN to CLK\_OUT; Active high.

**OE:** CLK\_OUT enable pin, Active low.

**Address= 8'h60**

SW PLL Control							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
<b>SWPLL RST</b>							<b>SWPLL1</b>

**SWPLL1:** set PLL1 input configuration from SWPLL1\_XX set, otherwise hard wired with chip default value.

**SWPLLRST:** set 1, chip will enter a reset mode waiting for PLL stable in 1ms. After that, SW needs to re-program all register setting except PLL configuration.

**Address= 8'h61**

SW PLL Config							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
<b>SWPLL1_OD</b>					<b>SWPLL1 _OE</b>	<b>SWPLL1 _PD</b>	<b>SWPLL1 _BP</b>

**SWPLL1\_BP:** PLL1\_BP SW program source.

Fast Switch Control							
7-bit	6-bit	5-bit	4-bit	3-bit	2-bit	1-bit	0-bit
0	0	0	0	0	0	0	0
						OFSWOPT	OFWSSEL

**OFSWOPT:** When 1 and REG04[3]=1, Fast switch select signal is OFWSSEL (REG6F[0]). Otherwise, the fast switch select signal is PIN MPOUT(FID).

**OFWSSEL:** Fast switch select signal. Only valid when OFSWOPT = 1.

## Electrical Specifications

### Absolute Maximum Ratings Over Operating Free-Air Temperature Range

Supply voltage range: IOV <sub>DD</sub> to DGND .....
.....
DV <sub>DD</sub> to DGND .....
.....
PLL_AV <sub>DD</sub> to PLL_AGND .....
.....
CH1_AV <sub>DD</sub> to CH1_AGND .....
.....
Digital input voltage range, V <sub>i</sub> to DGND .....
.....
Input voltage range, XTAL1 to PLL_GND .....
.....
Analog input voltage range A <sub>i</sub> to CH1_AGND .....
.....
Digital Output voltage range, V <sub>o</sub> to DGND .....
.....
Operating free-air temperature, TA .....

## Recommended Operating Conditions

		MIN	TYP	MAX	UNIT
$I_{ODV_{DD}}$	Digital I/O supply voltage	2.97	3.3	3.63	V
$DV_{DD}$	Digital supply voltage	1.62	1.8	1.98	V
$PLL\_AV_{DD}$	Analog PLL supply voltage	1.62	1.8	1.98	V
$CH1\_AV_{DD}$	Analog core supply voltage	1.7	1.8	1.9	V
$V_{I(P-P)}$	Analog input voltage (ac-coupling necessary)	0.25		1.0	V
$V_{IH}$	Digital input voltage high	2		5	V
$V_{IL}$	Digital input voltage low	-0.3		0.8	V
$V_{IH\_XTAL}$	XTAL input voltage high	0.7 $PLL\_AV_{DD}$			V
$V_{IL\_XTAL}$	XTAL input voltage low		0.3 $PLL\_AV_{DD}$		V
$I_{OH}$	High-level output current			2	mA
$I_{OL}$	Low-level output current			-2	mA
$I_{OH\_SCLK}$	SCLK high-level output current			4	mA
$I_{OL\_SCLK}$	SCLK low-level output current			-4	mA
$T_A$	Operating free-air temperature	-40		125	°C

## Crystal Specifications

CRYSTAL SPECIFICATIONS	MIN	NOM	MAX	UNIT
Frequency	27.0	36.0		MHz
Frequency tolerance	±100			ppm

## Electrical Characteristics

$DV_{DD} = 1.8 \text{ V}$ ,  $\text{PLL\_AV}_{DD} = 1.8 \text{ V}$ ,  $\text{CH1\_AV}_{DD} = 1.8 \text{ V}$ ,  $\text{IOV}_{DD} = 3.3 \text{ V}$

For minimum/maximum values:  $T_A = 0^\circ\text{C}$  to  $70^\circ\text{C}$ , and for typical values:  $T_A = 25^\circ\text{C}$  unless otherwise noted

## DC Electrical Characteristics

PARAMETER	TEST CONDITIONS (see NOTE 1)	MIN	TYP	MAX	UNIT
$I_{DD(IO\_D)}$ Digital I/O supply current	Color bar input		4.8		mA
$I_{DD(D)}$ Digital core supply current	Color bar input		50.7		mA
$I_{DD(PLL\_A)}$ Analog PLL supply current	Color bar input		5.9		mA
$I_{DD(CH1-A)}$ Analog PLL supply current	Color bar input		26.1		mA
$P_{TOT}$ Total power dissipation, normal mode	Color bar input	165	205		mW
$P_{DOWN}$ Total power dissipation, power-down mode	Color bar input		5		mW
$C_i$ Input capacitance	By design	8			pF

$V_{OH}$	Output voltage high	$I_{OH} = 2 \text{ mA}$	0.8 IOV <sub>DD</sub>	V
$V_{OL}$	Output voltage low	$I_{OL} = -2 \text{ mA}$	0.2 2 IOV <sub>DD</sub>	V
$V_{OH\_SCLK}$	SCLK output voltage high	$I_{OH} = 4 \text{ mA}$	2 .3	V
$V_{OL\_SCLK}$	SCLK output voltage low	$I_{OL} = -2 \text{ mA}$	0 .6	V
$I_{IH}$	High-level input current	$V_I = V_{IH}$	$\pm 50$	$\mu\text{A}$
$I_{IL}$	Low-level input current	$V_I = V_{IL}$	$\pm 50$	$\mu\text{A}$

NOTE 1: Measured with a load of 15 pf.

### Analog Processing and A/D Converters

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$Z_i$	Input impedance, analog video inputs	By design	500		k $\Omega$
$C_i$	Input capacitance, analog video inputs	By design	10		pF
$V_{i(pp)}$	Input voltage range *	$C_{coupling} = 0.1 \mu\text{F}$	0.25	1	V
$\Delta G$	Gain control range		12		dB
DNL	DC differential non-linearity	A/D only	$\pm 2$		LSB
INL	DC integral non-linearity	A/D only	$\pm 3$		LSB
Fr	Frequency response	6 MHz	-0.9	-3	dB

SNR	Signal-to-noise ratio	6 MHz, 1.0 Vp-p	50	dB
NS	Noise spectrum	50% flat field	50	dB
DP	Differential phase		1.5	°
DG	Differential gain		0.5%	

\* The 0.75-V maximum applies to the sync-chroma amplitude, not sync-white. The recommended termination resistors are 37.4 Ω.

## Timing

### Clocks, Video Data, Sync timing (27/36MHz)

#### Data Format : CCIR656 output

PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT
PIXCLK High pulse duration	$t_{hw}$	18.5/13.5			ns
PIXCLK Low pulse duration	$t_{lw}$	18.5/13.5			ns
CCIR656 data out setup time	$t_{su}$	18.5/13.5			ns
CCIR656 data out hold time	$t_h$	18.5/13.5			ns

Output:CCIR656

#### NOTES

1. DATUM T, U, AND Z TO BE DETERMINED AT DATUM PLANE H.
2. DIMENSIONS D AND E TO BE DETERMINED AT SEATING PLANE DATUM Y.
3. DIMENSIONS D1 AND E1 DO NOT INCLUDE MOLDPROTRUSION. ALLOWABLE PROTRUSION IS 0.25 PER SIDE. DIMENSIONS D1 AND E1 DO INCLUDE MOLD MISMATCH AND ARE DETERMINED AT DATUM PLANE DATUM H.
4. DIMENSION b DOES NOT INCLUDE DAM BAR PROTRUSION. ALLOWABLE DAM BAR PROTRUSION SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED THE MAXIMUM DIMENSION BY MORE THAN 0.08 mm. DAM BAR CANNOT BE LOCATED ON THE LOWER RADIUS OR THE FOOT. MINIMUM SPACE BETWEEN PROTRUSION AND AN ADJACENT LEAD IS 0.07 mm.

### Disclaimer

The information appearing in this publication is believed to be accurate. Integrated circuits sold by DAVICOM Semiconductor are covered by the warranty and patent indemnification provisions stipulated in the terms of sale only. DAVICOM makes no warranty, express, statutory, implied or by description regarding the information in this publication or regarding the information in this publication or regarding the freedom of the described chip(s) from patent infringement. FURTHER, DAVICOM MAKES NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE. DAVICOM reserves the right to halt production or alter the specifications and prices at any time without notice. Accordingly, the reader is cautioned to verify that the data sheets and other information in this publication are current before placing orders. Products described herein are intended for use in normal commercial applications. Applications involving unusual environmental or reliability requirements, e.g. military equipment or medical life support equipment, are specifically not

recommended without additional processing by DAVICOM for such applications. Please note that application circuits illustrated in this document are for reference purposes only.

DAVICOM's terms and conditions printed on the order acknowledgment govern all sales by DAVICOM. DAVICOM will not be bound by any terms inconsistent with these unless DAVICOM agrees otherwise in writing. Acceptance of the buyer's orders shall be based on these terms.

### Company Overview

DAVICOM Semiconductor Inc. develops and manufactures integrated circuits for integration into data communication products. Our mission is to design and produce IC products that are the industry's best value for Data, Audio, Video, and Internet/Intranet applications. To achieve this goal, we have built an organization that is able to develop chipsets in response to the evolving technology requirements of our customers while still delivering products that meet their cost requirements.

### Products

We offer only products that satisfy high performance requirements and which are compatible with major hardware and software standards. Our currently available and soon to be released products are based on our proprietary designs and deliver high quality, high performance chipsets that comply with modem communication standards and Ethernet networking standards.

### Contact Windows

For additional information about DAVICOM products, contact the Sales department at:

#### Headquarters

##### Hsin-chu Office:

No.6 Li-Hsin Rd. VI,  
Science-based Industrial Park,  
Hsin-chu City, Taiwan, R.O.C.  
TEL: +886-3-5798797  
FAX: +886-3-5646929
