

DP7500

PWM Power Control Circuitry

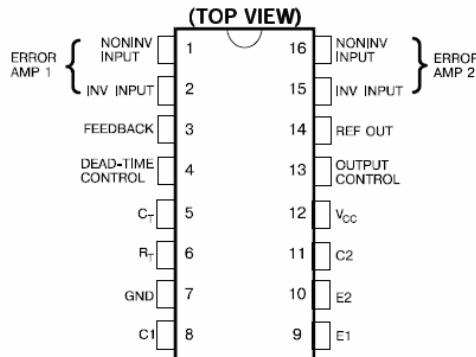

FEATURES

- Complete PWM Power Control Circuitry
- Uncommitted Outputs for 200 mA Sink or Source Current
- Output Control Selects Single-Ended or Push-Pull Operation
- Internal Circuitry Prohibits Double Pulse at Either Output
- Variable Dead-Time Provides Control over Total Range
- Internal Regulator Provides a Stable 5-V Reference Supply, 1%
- Circuit Architecture Allows Easy Synchronization

DESCRIPTION

The DP7500 incorporate on a single monolithic chip all the functions required in the construction of a pulse-width-modulation control circuit. Designed primarily for power supply control, these devices offer the systems engineer the flexibility to tailor the power supply control circuitry to his application.

The DP7500 contains an error amplifier, an on-chip adjustable oscillator, a dead-time control comparator, pulse-steering control flip-flop, a 5-volt, 1% precision regulator, and output-control circuits. The error amplifier exhibits a common-mode voltage range from -0.3 volts to V_{CC} -2 volts. The dead-time control comparator has a fixed offset that provides approximately 5% dead time when externally altered. The on-chip oscillator may be bypassed by terminating R_T (pin 6) to the reference output and providing a sawtooth input to C_T (pin 5), or it may be used to drive the common circuits in synchronous multiple-rail power supplies. The uncommitted output transistors provide either common-emitter or emitter-follower output capability. Each device provides for push-pull or single-ended output operation, which may be selected through the output-control function. The architecture of these devices prohibits the possibility of either output being pulsed twice during push-pull operation.

Absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Rating	Value	Unit
Supply voltage, V_{CC}	42	V
Amplifier input voltage	$V_{CC}+0.3$	
Collector output voltage	41	
Collector output current	250	mA
Operating free-air temperature range	0 to 70	°C
Storage temperature range	-65 to 150	
Lead temperature 1.6 mm from case for 10 seconds	260	

Recommended operating conditions

Parameter	Value		Unit
	MIN	MAX	
Supply voltage, V_{CC}	7	40	V
Amplifier input voltage, V_i	-0.3	$V_{CC}-2$	
Collector output voltage, V_o		40	
Collector output current (each transistor)		200	mA
Current into feedback terminal		0.3	
Timing capacitor, C_T	0.0047	10	μF
Timing resistor, R_T	1.8	500	k Ω
Oscillator frequency	1	200	kHz
Operating free-air temperature, T_A	0	70	°C
