DS15EA101
0.15 to 1.5 Gbps Adaptive Cable Equalizer with LOS Detection

General Description

The DS15EA101 is an adaptive equalizer optimized for equalizing data transmitted over copper cables. The DS15EA101 operates over a wide range of data rates from 150 Mbps to 1.5 Gbps and automatically adapts to equalize any cable length from zero meters to lengths that attenuate the signal by 35 dB at 750 MHz.

The DS15EA101 allows either single-ended or differential input drive. This enables equalization of coaxial cables as well as differential twin-ax and twisted pair cables.

Additional features include an LOS output and an output enable which, when tied together, disable the output when no signal is present.

The DS15EA101 is powered from a single 3.3V supply and consumes 210 mW at 1.5 Gbps. It is available in a space saving 4 x 4 mm LLP-16 package which allows for high density placement of components in multi-channel applications.

Note 1: "Absolute Maximum Ratings" are those parameter values beyond which the life and operation of the device cannot be guaranteed. The stating herein of these maximums shall not be construed to imply that the device can or should be operated at or beyond these values. The table of "Electrical Characteristics" specifies acceptable device operating conditions.

Note 2: Current flow into device pins is defined as positive. Current flow out of device pins is defined as negative. All voltages are stated referenced to 0 volts.

Note 3: Typical values are stated for V_{CC} = +3.3V and T_A = +25°C.

Note 4: Specification is guaranteed by characterization.

Note 5: Specification is guaranteed by design.

Note 6: The maximum input voltage amplitude assumes a DC-balanced signal.

Note 7: Supply current depends on the amount of cable being equalized. The current is highest for short cable and decreases as the cable length is increased.
