

DS1648/DS3648/DS1678/DS3678 TRI-STATE® TTL to MOS Multiplexers/Drivers

General Description

The DS1648/DS3648 and DS1678/DS3678 are quad 2-input multiplexers with TRI-STATE outputs designed to drive the large capacitive loads (up to 500 pF) associated with MOS memory systems. A PNP input structure is employed to minimize input currents so that driver loading in large memory systems is reduced. The circuit employs Schottky-clamped transistors for high speed and TRI-STATE outputs for bus operation.

The DS1648/DS3648 has a 15Ω resistor in series with the outputs to dampen transients caused by the fast-switching

output. The DS1678/DS3678 has a direct, low impedance output for use with or without an external resistor.

Features

- TRI-STATE outputs interface directly with system-bus
- Schottky-clamped for better ac performance
- PNP inputs to minimize input loading
- TTL compatible
- High-speed capacitive load drivers
- Built-in damping resistor (DS1648/DS3648 only)

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Logical "1" Input Voltage	7V
Logical "0" Input Voltage	-1.5V
Storage Temperature Range	-65°C to +150°C
Maximum Power Dissipation* at 25°C	
Cavity Package	1433 mW
Molded Package	1362 mW
Lead Temperature (Soldering, 10 seconds)	300°C

* Derate cavity package 9.6 mW/°C above 25°C; derate molded package 10.9 mW/°C above 25°C.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the -55°C to +125°C temperature range for the DS1648 and DS1678 and across the 0°C to +70°C range for the DS3648 and DS3678. All typical values for $T_A = 25^\circ C$ and $V_{CC} = 5V$.

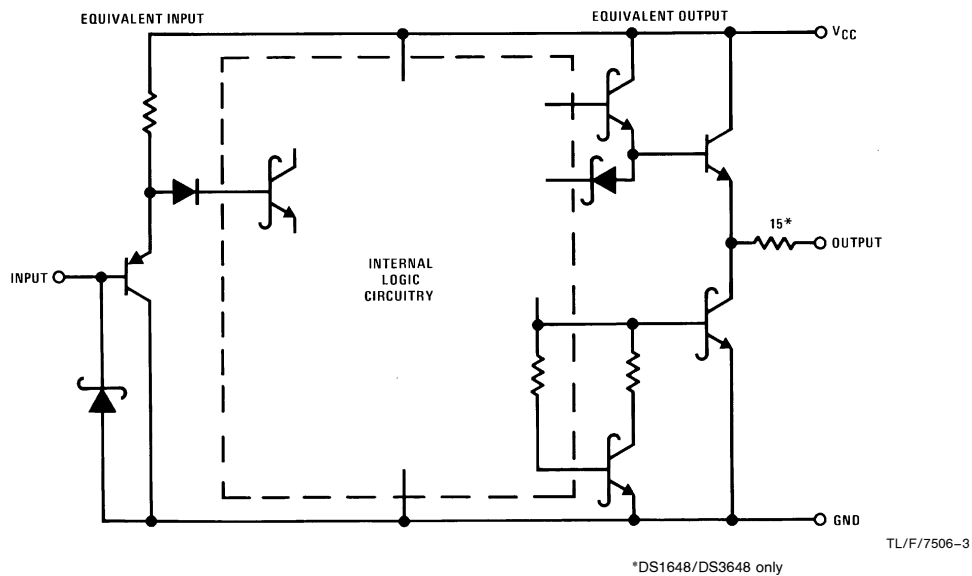

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: When measuring output drive current and switching response for the DS1678 and DS3678 a 15 Ω resistor should be placed in series with each output. This resistor is internal to the DS1648/DS3648 and need not be added.

Switching Characteristics $V_{CC} = 5V, T_A = 25^\circ C$ (Note 4)
