## General Description

The ECG003B-G is a general-purpose buffer amplifier that offers high dynamic range in a low-cost surface-mount package. At 1000 MHz, the ECG003B-G typically provides 20 dB of gain, +39 dBm Output IP3, and +24 dBm P1dB.

The ECG003B-G consists of Darlington pair amplifiers using the high reliability InGaP/GaAs HBT process technology and only requires DC-blocking capacitors, a bias resistor, and an inductive RF choke for operation. The device is ideal for wireless applications and is available in a low-cost, surface-mount lead-free/green/RoHS-compliant SOT-89 package. All devices are 100% RF and DC tested.

This broadband MMIC amplifier can be directly applied to various current and next generation wireless technologies. In addition, the ECG003B-G will satisfy general amplification requirements in the DC to 6 GHz frequency range such as CATV and mobile wireless.

Notes:

1. R1 and R2 are shown in the circuit diagram to avoid potential instabilities. The configuration shown above assures unconditional stability. It is expected linearity parameters (OIP3 and P1dB) to degrade about 0.5 dB, while overall gain will be about 2 dB less than the performance shown on page 2 and 3. Input and output return loss is expected to improve with the use of the I/O series resistances at 2 GHz.
