35 - 55ns**2Mb CMOS STATIC SRAM****FEATURES**

- High density SRAM module
- Organized as 262,144 x 8
- Access time 35 - 55ns
- Low power consumption
Standby: 100 μ W(typ.)
Operating: 325mW(typ.)
- Power supply voltage 5V $\pm$ 10%
- TTL compatible inputs and outputs
- Fully static operation
- 32 pin DIP package
- JEDEC standard pinout
- MIL or commercial temperature range

Pin Configuration**Pin Description**

A0 - A17	Address Inputs
IO1 - IO8	Data Inputs/Outputs
$\overline{CE}$	Chip Enable
$\overline{OE}$	Output Enable
$\overline{WE}$	Write Enable
VCC	Power Supply
GND	Ground

GENERAL DESCRIPTION

The ELPAQ EMS256Kx8B is a high performance 2Mb CMOS SRAM module organized as 262,144 bytes of 8 bits each, using two 1Mb SRAMs and a decoder. The EMS256Kx8B is packaged in a 32 lead 600 mil wide ceramic or plastic DIP package. The module is offered in a variety of temperature and speed combinations.

All inputs and outputs are TTL compatible and the module operates from a single 5V power supply. The EMS256Kx8B is a fully asynchronous SRAM and requires no clocks for operation. The module is also available in Low Power and Low Power with Data Retention versions for applications where low current and low stand-by voltages are required.

Writing data to the module is accomplished by bringing the chip enable ($\overline{CE}$) and write enable ($\overline{WE}$) inputs LOW. Data present on the eight I/O pins (IO₁ - IO₈) of the device is then written into the memory location specified by the address inputs (A₀ - A₁₇). Reading data from the device is accomplished by bringing chip enable ($\overline{CE}$) and ($\overline{OE}$) LOW while write enable remains inactive or HIGH. The data in the location specified by the address inputs will then appear on the I/O pins.
