

ENH150X1-200/300 Color TFT-LCD Module Features

GENERAL DESCRIPTION

Panelview provides optically enhanced solutions to the standard Sharp LQ150X1DG16 color active matrix LCD module. The first enhancement is an index matching (IM) film lamination to the front surface of the display polarizer. The IM film is available in two surface treatments - IM/Clear and IM/110 (a 10% diffusion). The second enhancement is the incorporation of a reflective polarizer (RP) providing for up to 40% increase in brightness.

This module is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a backlight unit. Graphics and text can be displayed on a 1024 x 3 x 768 dot panel with 262, 144 color by supplying 36-bit data signal (6bit x 2 pixel x RGB), four timing signals, +5V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

It is a wide viewing-angle-module (Vertical viewing angle: 120° Horizontal viewing angle: 140°).

Input signal timing conforms with 75Hz mode of VESA standard.

Panelview assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets. Panelview does assume the responsibility for the warranty of the enhanced product.

BACKLIGHT DRIVING SECTION

The backlight system is an edge-lighting type with single CCFT (Cold Cathode Fluorescent Tube).

The characteristics of a single lamp are shown in the following table. $t_A=25^{\circ}\text{C}$

The value mentioned below is at the case of one CCFT.

Parameter	Symbol	MIN	TYP	MAX	Unit	Remark
Lamp current	I_L	2.5	6.0	6.5	mArms	(1)
Lamp voltage	V_L	-	690	-	Vrms	$t_A=25^{\circ}\text{C}$
Lamp power consumption	P_L	-	4.1	-	W	(2)
Lamp frequency	F_L	20	60	70	KHz	(3)
Kickoff voltage	V_s	-	-	850	Vrms	$t_A=25^{\circ}\text{C}$
		-	-	1450	Vrms	$t_A=0^{\circ}\text{C}$ (4)
Lamp life time	L_L	50000	-	-	hour	(5)

Notes:

1. A lamp can be lit in the range of the lamp current shown above.
Maximum rating for current is measured by high frequency current measurement equipment connected to VLOW at circuit shown below. (Note: To keep enough kick-off voltage and necessary steady voltage for CCFT.)
Lamp frequency: 20-60kHz
Ambient temperature: 0-50°C

2. Referential data per one CCFT by calculation ($I_L \times V_L$).
The data does not include loss at inverter.
3. Lamp frequency of inverter may produce interference with horizontal synchronous frequency, and this may cause horizontal beat on the display. Therefore, adjust lamp frequency keep inverter far from module or use electronic shielding between inverter and module to avoid interference.
4. The voltage above this value should be applied to the lamp for more than 1 second to startup. Otherwise, the lamp may not be turned on.
5. Lamp life time is defined as the time when either (1) or (2) under the continuous operation under the condition of $t_A=25^{\circ}\text{C}$ and $I_L=6.0 \pm 0.5\text{mArms}$
 1. Brightness becomes 50% of the original value under standard condition.
 2. Kick-off voltage at $t_A=0^{\circ}\text{C}$ exceeds maximum value, 1450 Vrms.

The performance of the backlight, for example life time or brightness, is influenced by the characteristics of the DC-AC inverter for the lamp. When designing or ordering the inverter, make sure that poor lighting caused by the mismatch of the backlight and the inverter (mis-lighting, flicker, etc.) do not occur. Once this is confirmed, the module should be operated in the same condition as it is installed in the instrument.

TIMING CHARACTERISTICS OF INPUT SIGNALS

Input Data Signals and Display Position on the Screen

Graphics and text can be displayed at 1024 x 3 x 768 dots on a panel with 262, 144 colors by supplying 36 bit data signal (6bit/color [64 gray scale] x 3 x 2 pixel).

Two pixel-data are sampled at the same time.

Notes:

- The measurements shall be executed 30 minutes after lighting at rating. (typical condition: $I_L=6\text{mArms}$) The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig. 4 below.

Fig. 4. Optical Characteristics Measurement Method

Notes:

1. Definition of viewing angle range:

2. Definition of contrast ratio

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

3. Definition of response time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

4. This shall be measured at the center of the screen.

5. Definition of white uniformity:

White uniformity is defined as the following with five measurements.

(A-E).

$$\bar{\sigma}_w = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

HANDLING PRECAUTIONS

1. Be sure to turn off the power supply when inserting or disconnecting the cable.
2. Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
3. Since the front polarizer is easily damaged, pay attention not to scratch it.
4. Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
5. When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
6. Since the panel is made of glass, it may break crack or internal wire breaking if dropped or bumped on hard surface. Handle with care.
7. Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
8. This module has its circuitry PCBs on the rear side and should be carefully handled in order not to be stressed.
9. When designing the cabinet, take into consideration the access to the backlight assembly.
10. When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issues, functional defect, etc. Such a design should be avoided.

PACKING FORM

1. Piling number of cartons: 5 cartons
2. Package quantity in one carton: 5 modules
3. Carton size: 410mm(W)x 225mm(H) x 500mm(D)
4. Total weight of 1 carton filled with full modules: 8850g

OTHERS

1. Disassembling the module can cause permanent damage and should be strictly avoided.
2. Be careful since image retention may occur when a fixed pattern is displayed for a long time.
