

ES8336

Low Power Audio CODEC

FEATURES

System

- High performance and low power multi-bit delta-sigma audio ADC and DAC
- I²S/PCM master or slave serial data port
- Two pairs of analog input with differential input option
- 256/384Fs and USB 12/24 MHz system clocks
- I²C interface

ADC

- 24-bit, 8 to 96 kHz sampling frequency
- 92 dB signal to noise ratio, -85 dB THD+N
- Low noise pre-amplifier
- Auto level control (ALC) and noise gate
- Mic bias
- Support digital mic

DAC

- 24-bit, 8 to 96 kHz sampling frequency
- 93 dB signal to noise ratio, -85 dB THD+N
- Ground centered headphone driver
- Headphone and external mic detection
- Pop and click noise suppression

Low Power

- 1.8V to 3.3V operation
- 7 mW playback; 16 mW playback and record

APPLICATIONS

- MID/Tablet
- Wireless audio
- Portable audio

3. TYPICAL APPLICATION CIRCUIT

4. CLOCK MODES AND SAMPLING FREQUENCIES

The device supports two types of clocking: standard audio clocks (256Fs, 384Fs, 512Fs, etc), USB clocks (12/24 MHz), and non standard audio clocks like 19.2 MHz.

According to the serial audio data sampling frequency (Fs), the device can work in two speed modes: single speed mode or double speed mode. In single speed mode, Fs normally ranges from 8 kHz to 48 kHz, and in double speed mode, Fs normally range from 64 kHz to 96 kHz.

The device can work either in master clock mode or slave clock mode. In slave mode, LRCK and SCLK are supplied externally, and LRCK and SCLK must be synchronously derived from the system clock with specific rates. In master mode, LRCK and SCLK are derived internally from device master clock.

5. MICRO-CONTROLLER CONFIGURATION INTERFACE

The device supports standard I²C micro-controller configuration interface. External micro-controller can completely configure the device through writing to internal configuration registers.

I²C interface is a bi-directional serial bus that uses a serial data line (SDA) and a serial clock line (SCL) for data transfer. The timing diagram for data transfer of this interface is given in Figure 1. Data are transmitted synchronously to SCL clock on the SDA line on a byte-by-byte basis. Each bit in a byte is sampled during SCL high with MSB bit being transmitted firstly. Each transferred byte is followed by an acknowledge bit from receiver to pull the SDA low. The transfer rate of this interface can be up to 400 kbps.

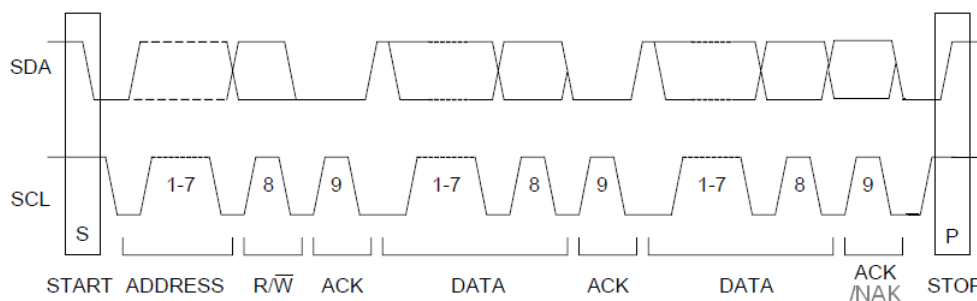

Figure 1 Data Transfer for I²C Interface

A master controller initiates the transmission by sending a “start” signal, which is defined as a high-to-low transition at SDA while SCL is high. The first byte transferred is the slave address. It is a seven-bit chip address followed by a RW bit. The chip address must be 001000x, where x equals ADO. The RW bit indicates the slave data transfer direction. Once an acknowledge bit is received, the data transfer starts to proceed on a byte-by-byte basis in the direction specified by the RW bit. The master can terminate the communication by generating a “stop” signal, which is defined as a low-to-high transition at SDA while SCL is high.

In I²C interface mode, the registers can be written and read. The formats of “write” and “read” instructions are shown in Table 1 and Table 2. Please note that, to read data from a register, you must set R/W bit to 0 to access the register address and then set R/W to 1 to read data from the register.

Table 1 Write Data to Register in I²C Interface Mode

Chip Address	R/W		Register Address		Data to be written
001000	AD0	0	ACK	RAM	ACK
					DATA

Table 2 Read Data from Register in I²C Interface Mode

Chip Address	R/W		Register Address
001000	AD0	0	ACK
			RAM
Chip Address	R/W		Data to be read
001000	AD0	1	ACK
			Data

6. DIGITAL AUDIO INTERFACE

The device provides many formats of serial audio data interface to the input of the DAC or output from the ADC through LRCK, BCLK (SCLK) and DACDAT/ADCDAT pins. These formats are I²S, left justified, DSP/PCM and TDM mode. DAC input DACDAT is sampled by the device on the rising edge of SCLK. ADC data is out at ADCDAT on the falling edge of SCLK. The relationship of SDATA (DACDAT/ADCDAT), SCLK and LRCK with these formats are shown through Figure 2 to Figure 6.

Figure 2 I²S Serial Audio Data Format Up To 24-bit

7. ELECTRICAL CHARACTERISTICS

ABSOLUTE MAXIMUM RATINGS

Continuous operation at or beyond these conditions may permanently damage the device.

PARAMETER	MIN	MAX
Analog Supply Voltage Level	-0.3V	+3.6V
Digital Supply Voltage Level	-0.3V	+3.6V
Analog Input Voltage Range	AGND-0.3V	AVDD+0.3V
Digital Input Voltage Range	DGND-0.3V	PVDD+0.3V
Operating Temperature Range	-40°C	+85°C
Storage Temperature	-65°C	+150°C

RECOMMENDED OPERATING CONDITIONS

PARAMETER	MIN	TYP	MAX	UNIT
AVDD	2.0	3.3	3.6	V
CPVDD	1.6	1.8	2.0	V
DVDD	1.6	1.8/3.3	3.6	V
PVDD	1.6	1.8/3.3	3.6	V

ADC ANALOG AND FILTER CHARACTERISTICS AND SPECIFICATIONS

Test conditions are as the following unless otherwise specify: AVDD=3.3V, DCVDD=1.8V, AGND=0V, DGND=0V, Ambient temperature=25°C, Fs=48 KHz, 96 KHz or 192 KHz, MCLK/LRCK=256.

PARAMETER	MIN	TYP	MAX	UNIT
ADC Performance				
Signal to Noise ratio (A-weight)	85	92	95	dB
THD+N	-88	-85	-75	dB
Channel Separation (1KHz)	80	85	90	dB
Interchannel Gain Mismatch		0.1		dB
Gain Error			±5	%
Filter Frequency Response – Single Speed				
Passband	0		0.4535	Fs
Stopband	0.5465			Fs
Passband Ripple			±0.05	dB
Stopband Attenuation	50			dB
Filter Frequency Response – Double Speed				
Passband	0		0.2268	Fs
Stopband	0.4535			Fs
Passband Ripple			±0.005	dB
Stopband Attenuation	50			dB
Analog Input				
Full Scale Input Level		±AVDD/3.3		±Vrms
Input Impedance		20		KΩ

DAC ANALOG AND FILTER CHARACTERISTICS AND SPECIFICATIONS

Test conditions are as the following unless otherwise specify: AVDD=3.3V, DCVDD=1.8V, AGND=0V, DGND=0V, Ambient temperature=25°C, Fs=48 KHz, 96 KHz or 192 KHz, MCLK/LRCK=256.

PARAMETER	MIN	TYP	MAX	UNIT
DAC Performance				
Signal to Noise ratio (A-weight)	83	93	95	dB
THD+N	-85	-83	-75	dB
Channel Separation (1KHz)	80	85	90	dB
Interchannel Gain Mismatch		0.05		dB
Filter Frequency Response – Single Speed				
Passband	0		0.4535	Fs
Stopband	0.5465			Fs
Passband Ripple			±0.05	dB
Stopband Attenuation	40			dB
Filter Frequency Response – Double Speed				
Passband	0		0.2268	Fs
Stopband	0.4535			Fs
Passband Ripple			±0.005	dB

Stopband Attenuation	40			dB
De-emphasis Error at 1 KHz (Single Speed Mode Only)				
Fs = 32KHz			0.002	dB
Fs = 44.1KHz			0.013	
Fs = 48KHz			0.0009	
Analog Output				
Full Scale Output Level		AVDD/3.3		Vrms

POWER CONSUMPTION CHARACTERISTICS

PARAMETER	MIN	TYP	MAX	UNIT
Normal Operation Mode				
DVDD=1.8V, PVDD=1.8V, AVDD=1.8V: Play back		7		mW
Play back and record		16		
DVDD=3.3V, PVDD=3.3V, AVDD=3.3V: Play back		31		
Play back and record		59		
Power Down Mode				
DVDD=1.8V, PVDD=1.8V, AVDD=1.8V		TBD		mW
DVDD=3.3V, PVDD=3.3V, AVDD=3.3V		TBD		

SERIAL AUDIO PORT SWITCHING SPECIFICATIONS
