

## Company Overview

**AEM is a global high-tech manufacturer redefining the standards of quality and value in the electronic components industry with its leading edge technologies.**

AEM's products are used globally for circuit protection and EMI signal filtering by many fortune 500 companies and other renowned customers in the telecommunication, computer, consumer electronics, automotive, aerospace, and military industries. AEM's patented breakthrough technologies and lean manufacturing facilities (US and China based) ensure superior quality at the best value.

### **AEM fuses have been in orbit for 38-plus years with zero reported failures**

AEM entered into the circuit protection market by acquiring Mepcopal (a joint venture by Philips of Holland and Copal of Japan) in 1995. Within the aerospace industry, AEM holds a dominant position with regard to circuit protection. AEM has provided high-reliability fuses to the aerospace industry for more than 38 years with zero reported failures.

In 2001, AEM established a manufacturing base and logistic center in China which greatly enhanced AEM's ability to serve its global customers with the highest quality surface mount components in the shortest delivery time at the lowest prices.

AEM's products and service include the followings:

- **Commercial Circuit Protective Components**
  - SolidMatrix® Multilayer Monolithic Chip Fuses
  - Multilayer Varistors
- **Inductive Components**
  - Multilayer Ferrite Chip Beads/Power Beads
  - Multilayer Ferrite/Ceramic Inductors; Thin Film Inductors

- **High-reliability Manufacturing & Services**

### **AEM SolidMatrix® Chip Fuses**

AEM offers the broadest line of surface mount chip fuses in the industry. AEM SolidMatrix® Surface Mount Chip Fuses are recognized by Underwriters Laboratories (UL). Constructed as a multilayer monolithic structure using a co-firing process, these fuses offer superior mechanical integrity and are ideal for applications in LCD monitors, PC cards, disk drives, portable communication products, PDAs, digital cameras, DVDs, TVs, cell phones, rechargeable battery packs, battery chargers, etc.

### **AEM Multilayer Varistors**

AEM Surface Mount Multilayer Varistors (MLV) are manufactured with zinc oxide based semi-conductive ceramics using multilayer co-firing technology. These varistors are designed to protect electronics systems from surge and transient over-voltages by limiting surge voltage and absorbing energy. The MLV products have a wide range of applications, such as cell phones, digital cameras, PDA, MP3, notebooks, telecommunications, automotive systems, data systems, power supplies, etc.

### **AEM Quality Assurance**

AEM has received a number of accolades such as "Gold Supplier Award", "Supplier Excellence Award" from many of its customers, including Northrop Grumman, Lockheed Martin, etc.

AEM's San Diego and Suzhou, China facilities are ISO 9001:2000 certified. AEM Suzhou facility is also ISO 14001 certified. Long known for its high quality products and exceptional customer service, AEM also launched a 7x24 technical support hotline.

We are committed to constantly striving for excellence and perfection in providing products and customer service of the best quality and value.

## Environmental Tests:

No.	Test	Requirement	Test condition	Test reference
1	Soldering heat resistance	DCR change $\leq \pm 10\%$ No mechanical damage	One dip at 260°C for 60 sec.	MIL-STD-202 Method 210
2	Solderability	Minimum 95% coverage	One dip at 255°C for 5 sec.	MIL-STD-202 Method 208
3	Thermal shock	DCR change $\leq \pm 10\%$ No mechanical damage	100 cycles between -65°C and +125°C	MIL-STD-202 Method 107
4	Moisture resistance	DCR change $\leq \pm 15\%$ No excessive corrosion	10 cycles	MIL-STD-202 Method 106
5	Salt spray	DCR change $\leq \pm 10\%$ No excessive corrosion	48 hour exposure	MIL-STD-202 Method 101
6	Mechanical vibration	DCR change $\leq \pm 10\%$ No mechanical damage	0.4" D.A. or 30 G between 5 – 3000 Hz	MIL-STD-202 Method 204

8	Terminal strength	No mechanical damage	30 sec. hanging for 1206 (1.5kg) and 0603 (0.5kg), 2 lb pushing for 0402	Refer to AEM QIQ007
9	Life	No electrical "opens" during testing voltage drop change shall be less than $\pm 20\%$ of initial value	80% rated current (75% for <1A fuses) for 2000 hours at ambient temperature between +20°C and +30°C	Refer to AEM QIQ106

## Electrical Specifications:

**Clear-Time Characteristics:** Same as specified on the Short Form Data Sheet

**Insulation Resistance after Opening:** 20,000 ohms minimum when cleared with rated voltage applied. Fuse clearing under low voltage conditions may result in lower after clearing insulation resistance values. (Note: Under normal fault conditions (low or rated voltage conditions), AEM SolidMatrix fuses provide sufficient after clearing insulation resistance values for circuit protection.)

**Current Carrying Capacity:** 100% rated current at +25°C ambient for 4 hours minimum when evaluated per MIL-PRF-23419

**Interrupt Ratings:** as specified in this catalog.

## Fuse Selection and Temperature De-rating Guideline:

The ambient temperature affects the current carrying capacity of fuses. When a fuse is operating at a temperature higher than 25°C, the fuse shall be "de-rated".

To select a fuse from the catalog, the following rule may be followed:  
 Catalog Fuse Current Rating = Nominal Operating Current / 0.75 / % De-rating at the maximum operating temperature.

Example: At maximum operating temperature of 65°C, % De-rating is 90%. The nominal operating current is 4A. The current rating for fuse selected from the catalog shall be:  
 $4 / 0.75 / 90\% = 5.9$  or 6A.

## Soldering Temperature Profiles

**Recommended Temperature Profile  
for Sn/Pb Solder**

**Recommended Temperature Profile  
for Lead-free Solder**

Maximum peak temperature 260°C for maximum 60 seconds

Recommended conditions for hand soldering:

1. Appropriate temperature (max.) of soldering iron tip/soldering time (max.): 280°C /10s or 350°C / 3s
2. Using hot air rework station with tip that can melt the solder on both terminations at the same time is strongly recommended. Do not directly contact the chip termination with the tip of soldering iron.

## Packaging and Storage

### ***Storage***

The maximum ambient temperature shall not exceed 40°C. Storage temperatures higher than 40°C could result in the deformation of packaging materials. The maximum relative humidity recommended for storage is 70%. High humidity with high temperature can accelerate the oxidation of the solder plating on the termination and reduce the solderability of the components. Sealed plastic bags with desiccant shall be used to reduce the oxidation of the termination and should only be opened prior to use. The products should not be stored in areas where harmful gases containing sulfur or chlorine are present.
