FAIRCHILD SEMICONDUCTOR® FDS3692	April 2013	FDS3692
N-Channel PowerTrench [®] MOSFET 100V, 4.5A, 60m Ω		
Features	Applications	
• $r_{DS(ON)} = 50m\Omega$ (Typ.), $V_{GS} = 10V$, $I_D = 4.5A$	DC/DC converters and Off-Line UPS	
• Q _g (tot) = 11nC (Typ.), V _{GS} = 10V	Distributed Power Architectures and VRMs	
Low Miller Charge	Primary Switch for 24V and 48V Systems	
Low Q _{RR} Body Diode	High Voltage Synchronous Rectifier	
Optimized efficiency at high frequencies	Direct Injection / Diesel Injection Systems	
UIS Capability (Single Pulse and Repetitive Pulse)	42V Automotive Load Control	
Formerly developmental type 82745	Electronic Valve Train Systems	
Branding Dash 1 2 3 4 SO-8		

MOSFET Maximum Ratings	$T_A = 25^{\circ}C$ unless otherwise noted
------------------------	--

Symbol	Parameter	Ratings	Units V	
V _{DSS}	Drain to Source Voltage	100		
V _{GS}	Gate to Source Voltage	±20	V	
	Drain Current			
1	Continuous (T _A = 25 ^o C, V _{GS} = 10V, R _{θJA} = 50 ^o C/W)	4.5	A	
T_D Continuous ($T_A = 100^{\circ}C$, $V_{GS} = 10V$, $R_{\theta J}$ / Pulsed	Continuous (T _A = 100°C, V _{GS} = 10V, R _{θJA} = 50°C/W)	2.8	A	
	Pulsed	Figure 4	A	
E _{AS}	Single Pulse Avalanche Energy (Note 1)	171	mJ	
	Power dissipation	2.5	W	
P _D	Derate above 25°C	20	mW/ºC	
T _J , T _{STG}	Operating and Storage Temperature	-55 to 150	°C	

Thermal Characteristics

$R_{ extsf{ heta}JA}$	Thermal Resistance, Junction to Ambient at 10 seconds (Note 3)	50	°C/W
R_{\thetaJA}	Thermal Resistance, Junction to Ambient at 1000 seconds (Note 3)	85	°C/W
$R_{ extsf{ heta}JC}$	Thermal Resistance, Junction to Case (Note 2)	25	°C/W

	$I_{SD} = 2A$	-	-	1.0	V	
t _{rr}	Reverse Recovery Time	I _{SD} = 4.5A, dI _{SD} /dt= 100A/μs	-	-	47	ns
Q _{RR}	Reverse Recovered Charge	I _{SD} = 4.5A, dI _{SD} /dt= 100A/μs	-	-	64	nC

Notes:
1: E_{AS} of 171mJ is based on starting T_J = 25°C, L = 38mH, I_{AS} = 3A. 100% test at L = 1mH, I_{AS} = 10.3A.
2: R_{θJA} is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. R_{θJC} is guaranteed by design while R_{θCA} is determined by the user's board design.
3: R_{θJA} is measured with 1.0 in² copper on FR-4 board

Thermal Resistance vs. Mounting Pad Area

The maximum rated junction temperature, T_{JM} , and the thermal resistance of the heat dissipating path determines the maximum allowable device power dissipation, P_{DM} , in an application. Therefore the application's ambient temperature, T_A (°C), and thermal resistance $R_{\theta JA}$ (°C/W) must be reviewed to ensure that T_{JM} is never exceeded. Equation 1 mathematically represents the relationship and serves as the basis for establishing the rating of the part.

$$P_{DM} = \frac{(T_{JM} - T_A)}{R_{\theta JA}}$$
(EQ. 1)

In using surface mount devices such as the SO8 package, the environment in which it is applied will have a significant influence on the part's current and maximum power dissipation ratings. Precise determination of P_{DM} is complex and influenced by many factors:

- Mounting pad area onto which the device is attached and whether there is copper on one side or both sides of the board.
- 2. The number of copper layers and the thickness of the board.
- 3. The use of external heat sinks.
- 4. The use of thermal vias.
- 5. Air flow and board orientation.
- 6. For non steady state applications, the pulse width, the duty cycle and the transient thermal response of the part, the board and the environment they are in.

Fairchild provides thermal information to assist the designer's preliminary application evaluation. Figure 21 defines the $R_{\theta,JA}$ for the device as a function of the top copper (component side) area. This is for a horizontally positioned FR-4 board with 1oz copper after 1000 seconds of steady state power with no air flow. This graph provides the necessary information for calculation of the steady state junction temperature or power dissipation. Pulse applications can be evaluated using the Fairchild device Spice thermal model or manually utilizing the normalized

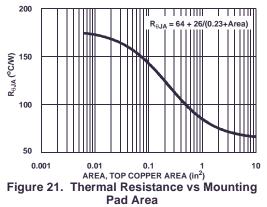

maximum transient thermal impedance curve.

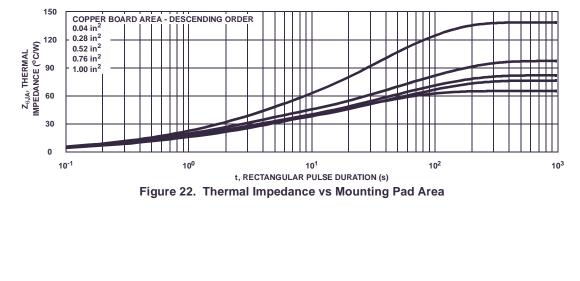

Thermal resistances corresponding to other copper areas can be obtained from Figure 21 or by calculation using Equation 2. The area, in square inches is the top copper area including the gate and source pads.

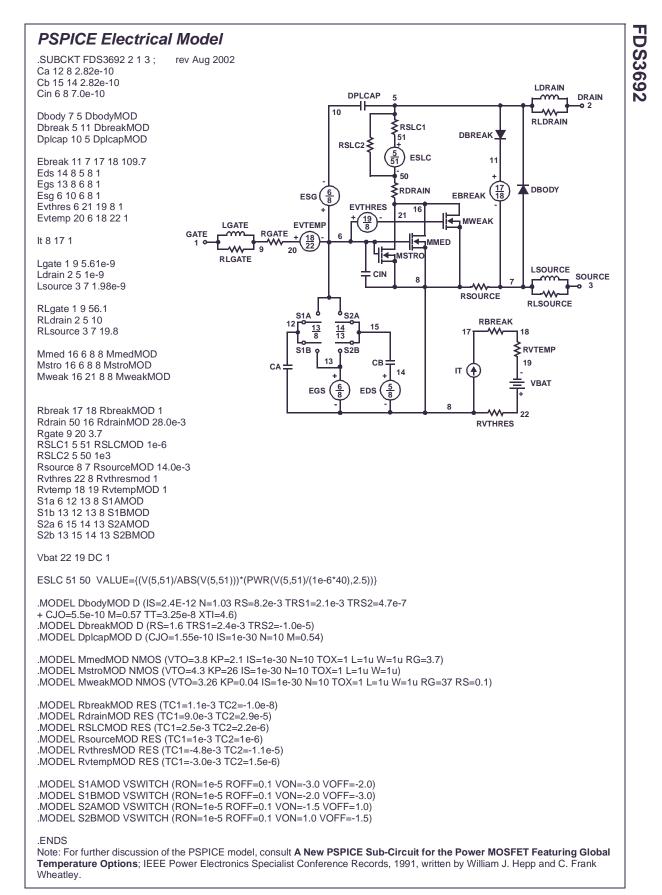

$$R_{\theta JA} = 64 + \frac{26}{0.23 + Area}$$
 (EQ. 2)

The transient thermal impedance $(Z_{\theta,JA})$ is also effected by varied top copper board area. Figure 22 shows the effect of copper pad area on single pulse transient thermal impedance. Each trace represents a copper pad area in square inches corresponding to the descending list in the graph. Spice and SABER thermal models are provided for each of the listed pad areas.

Copper pad area has no perceivable effect on transient thermal impedance for pulse widths less than 100ms. For pulse widths less than 100ms the transient thermal impedance is determined by the die and package. Therefore, CTHERM1 through CTHERM5 and RTHERM1 through RTHERM5 remain constant for each of the thermal models. A listing of the model component values is available in Table 1.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS. SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used here in:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
- A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.Fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufactures of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed application, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handing and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address and warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS **Definition of Terms**

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
