Specification of FUJITSU TFT-LCD module

FLC44SXC8V

Approval

Date :

By :

This Product is designed, developed and manufactured as contemplated for general use, including without limitation, general office use, personal use, household use, and ordinary industrial use, but is not designed, developed and manufactured as contemplated for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (hereinafter "High Safety Required Use"), including without limitation, nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system. If customer's product possibly falls under the category of High Safety Required Use, please consult with our sales representatives in charge before such use. In addition, Fujitsu shall not be liable against the Customer and/or any third party for any claims or damages arising in connection with the High Safety Required Use of the Product without permission.

Specification No. : Tech Bes LCD-00028

Issue Date : Jan. 23, 2002

1. APPLICATION

This specification is applied to the 17.4-inch SXGA supported TFT-LCD module.

A

A

2. PRODUCT NAME AND MODEL NUMBER

2-1 Product Name : LCD Module

2-2 Model Name : FLC44SXC8V

B

B

3. OVERVIEW

This LCD module has a TFT active matrix type liquid crystal panel 1280x1024 pixels, and diagonal size of 44cm(17.4-inch). This LCD has a CMOS digital RGB interface and can display 16,777,216 colors.

Even and odd data are transmitted at the same timing in the interface, so data lines are 48. (R, G, B each 8 bit x2) The signal level of this interface is +3.3V CMOS level or 5V TTL level.

The power supply of this LCD module is +5V DC single.

This module has the characteristics for applying TCO'99.

C

C

4. CONFIGURATION

This LCD module consists of a color TFT-LCD panel that is mounted with TFT driver ICs, a cold-cathode fluorescent tube back-light.

The inverter for the back-light is not included.

Figure 4-1 shows a block diagram of this LCD module.

8. ELECTRICAL SPECIFICATIONS

Table 8-1 shows the electrical specifications of this LCD module. Figure 8-1 shows the measurement circuit. Figure 8-2(A) shows the equivalent circuit of the logic signal input area. Figure 8-2(B) shows the equivalent circuit of the supply voltage Input area.

Table 8-1 Electrical Specifications

Item	Symbol	Condition	MIN.	TYP.	MAX.	Unit	Remark
Supply Current	I _{CC}	V _{CC} =+5.0±0.25V V _{SS} =0V DCLK=54MHz	—	850	1300	mA	*1
“H” Level Logic Input Voltage	V _{IH}		2.3	—	V _{CC}	V	
“L” Level Logic Input Voltage	V _{IL}		V _{SS}	—	0.9	V	
Leak Current(Logic Input)	I _{IL}		-5	—	+5	μA	
Supply Rush Current	I _{SCC}		—	—	2	A	*2
Supply Rush Current Duration(1.2A excess)	T _{SCC}	—	—	3	ms		
BACK LIGHT	CCFL Turn on Voltage	V _S	f _L =50kHz, Ta=25°C	—	1300	1500	Vrms
			f _L =50kHz, Ta=0°C	—	—	1500	
(*3)	Lighting Voltage	V _L	f _L =50kHz I _L =6mA	—	700	—	Vrms
	Lighting Frequency	f _L	V _L =700Vrms	40	50	60	kHz
	Tube Current	I _L	f _L =50kHz V _L =700Vrms	4	6	7	mArms

(*1) Typical current situation : Color bar pattern. V_{CC}=5.0V
Maximum current situation : 240th gray 2-pixel checker pattern. V_{CC}=4.75V
Without rush current.

(*2) These items prescribe the rush current for starting internal DC/DC.
Charging current to capacitors of V_{CC} is not prescribed.

(*3) Back-light specifications are valid when using a suitable inverter such as the FLCV-10

(*4) Tube current (I_L) shows the value of the current that is consumed at one lamp.
This LCD module has 4 lamps. Each 2 lamps are placed at upper side and lower side of the display.
2 lamps is connected in parallel. Each low voltage terminals are connected with 1 line cable to Back-light connector.

Note 6) Definition of Optimum Viewing Angle

Figure 9-6 Definition of Viewing Angle

Note 7) Definition of Brightness Uniformity

Brightness uniformity is defined by the following formula.

Brightness (I1~I9) are measured at the following 9 points (①~⑨) on the display area that is shown in Figure 9-7.

$$\text{Brightness Uniformity } (\Delta L) = \frac{|\text{Min. In }|}{|\text{Max. In }|} \times 100 (\%) , n = 1 \text{ to } 9$$

Note) Each measurement point (①~⑨) defines the center spot of view of Brightness Meter. The tolerance of measurement position is $\pm 3\text{mm}$.

Note.1) Definition of gray scale:Color (n)···"n" indicates gray scale level.

Larger number means brighter level.

Note.2) Data; 1:High, 0:Low

Note 3) Color data consist of 8 bit red, green and blue data of odd and even number pixel data. Total data number is 48 signals. This module is able to display 16,777,216 colors because each red, green and blue data is controlled independently.

Table 10-3 Timing Characteristics (Ta=0~50°C, Vcc=5±0.25V)

Item	Symbol	Min.	Typ.	Max.	Unit	Remark
DCLK signal (Clock)	Period	Tc	17.9	18.5	25.0	ns
	Frequency	1/Tc	40	54	56	MHz
	Duty	Tch/Tc	45	50	55	%
	High time	TelkH	5.0	—	—	ns
	Low time	TelkL	5.0	—	—	ns
	Rise time	Telkr	—	—	4.0	ns
	Fall time	Telkf	—	—	4.0	ns
DCLK-Data Timing	Setup time	Tset	3	—	—	ns
	Hold time	Thold	5	—	—	ns
ENAB signal	Horizontal Period	Th	710*1	844	887*1	DCLK
	Hor. Period	Th	14.0	15.6	—	μs
	Hor. Display period	Thd	640	640	640	DCLK *2
	Vertical Period	Tv	1028*1	1066	1088*1	Th
	Ver. Frequency	1/Tv	50	60	69	Hz
	Ver. Display period	Tvd	1024	1024	1024	Th *2
Data-ENAB timing	Tdn	—	0	—	DCLK	*3

- *1) •horizontal display position is specified by the rise of ENAB.
The data latched at falling edge of DCLK after rise of ENAB is displayed at the left edge of the display area.
- Vertical display position is specified by the rise of ENAB after low level continuation over 2048 DCLK.
The data latched at the rise of ENAB is displayed at the top line of the display area.

③ *2) •If the “High” level period of ENAB is less than 640 DCLK or the number of ENAB in a frame period (Tv) is less than 1024, black color is displayed at the rest of the display area.

*3) •If ENAB does not synchronize with the effective display data, the display position does not fit to the display area.

Supplier: KOWA ELECTRIC CO.LTD Part No. ~~KFN8367F3223150~~
 ④ SS26E3670E8550C3223150

11-3 Life

The life of the back-light is a minimum of 50,000 hours at the following conditions.

(1) Working conditions

- ① Ambient temperature : 25 ± 5°C
- ② Tube current (I_L) : (6mA or less)

(2) Definition of life

- ① Brightness becomes 50% or less than the minimum brightness value shown in Table 9-1.
- ② The lamp cannot be lit by the minimum value of the breakdown voltage(1500Vrms) shown in Table 8-1.
- ③ Flashing.

11-4 Lamp assembly set (for replacement)

Lamp assembly set(with charge)is prepared for replacing old lamp to new one. This set consists of a upper lamp assembly and a lower lamp assembly.

Type number : ~~FLCL-17~~ (for upper and lower)
 ④ FLCL-22

12. APPEARANCE SPECIFICATIONS

Length:L [mm]

Width:W[mm]

Average diameter:D[mm]

12-1 Appearance

No.	Item		Judgement method and standard	Remarks
1	Foreign Particle	Black particle	0.5 >D N ≤ 4	Recognized in the cell with lighting
		Fiber	3.0 >L N ≤ 4	
2	Scratch	Scratch on polarizer film	10.0 >L N ≤ 6	
3	Nick	Nick on polarezer film	0.5 >D N ≤ 6	

Note

- Foreign particle and scratch that do not affect display image, such as foreign article between glass and polarizer film out of the display area, scratch on metal vessel, back-light module or polarizer film out of the display area, etc. are not counted.
- These items apply to defects in the cell when the back-light is on, and defects on the surface of polarizer film inside the display area.
- Visually inspect appearance with keeping your eyes 35cm or more from the panel, using one 20W fluorescent light illumination at 50cm above the work table. At this time, the illuminance in the vertical direction to the fluorescent light is 400 to 600lux (reference value).

12-2 Dot defects (Bright spots, Dark spots)

12-2-1 Zone

Inside display dot area (345.6 X 276.48mm)

Display dot area means active area.

One pixel consists of 3 dots (red, green and blue).

12-2-2 Bright spots

(1) Bright spots classification (based on brightness samples)

- Red or Green spot is High Bright spot.
- Blue spot is Low Bright spot.
- Spots not seen in 50% gray pattern are ignored.

(2) Defects of color filter

- Larger than one half of a dot
- Same or smaller than one half of a dot

(3) Defects of chrome mask

- Larger than Ø50µm High Bright spot
- Same or smaller than Ø50µm not counted

A

12-2-3 Number of luminescent spot standard

Item	Entire Screen	
Brightness classification	High Bright Spots	High and Low Bright Spots
Number of defects	9 or less	15 or less

NOTES:

1. Display should be all black when luminescent spot is counted.
2. Number of high Bright spots of green (G) is up to 7.
3. Number of two low Bright spot connections is up to 7.
4. Number of three Bright spot connections and two high Bright spot connections is 0.
5. Number of high Bright spot and low Bright spot connections is up to 4.

B

12-2-4 Distance between Bright spots

- High Bright spots R and G 15mm or more
- High Bright spots and low Bright spot 5mm or more
(Except one or two of two bright spot connections)

C

12-2-5 Number of Dark spots standard

Item	Entire Screen
Number of defects	16 or less (When display is all white)

NOTES:

1. Display should be all white when dark spot is counted.
2. Number of two dark spot connections is up to 5.
3. Distance between defects is 5mm or more.
4. If dark spot is smaller than one dot size, convert with following rule and sum up.

D

- (a) $A < 1/3$: Not count.
(Only one of 4 dark connection is allowed.)
- (b) $1/3 \leq A < 2/3$: Considered as 0.5 dot.
- (c) $2/3 \leq A$: Considered as 1 dot.

(A= Dark spot size/dot size)

14. INDICATIONS

This module has the following indications.

- (1) Product name : **LCD unit**
- (2) Model Number : **FLC44SXC8V**
- (3) Product Drawing Number : **NA19020-C151**
- (4) Manufacturing Number : **0 7 0 0 0 0 1**

- (5) Version number : **01A** (Example)
 -1st 2 digits "01" means operational version.
 -3rd alphabet means functional version.

- (6) Manufacturer Country Name :
- (7) Company Name : **FUJITSU LIMITED**

- (8) Disposal method of cold-cathode tubes. (See Figure 14-1)
- (9) Caution when changing cold-cathode tubes. (See Figure 14-2)

・ THIS TFT COLOR LCD CONTAINS COLD CATHODE FLUORESCENT LAMPS. PLEASE FOLLOW LOCAL ORDINANCES OR REGULATIONS FOR ITS DISPOSAL.
 ・ 当該液晶ディスプレイユニットには、蛍光管が組み込まれていますので、地方自治体の条例または規則に従って廃棄して下さい。

Figure 14-1

・ WHEN CHANGING COLD CATHODE FLUORESCENT LAMPS, FOLLOW OPERATING SPECIFICATIONS, ESPECIALLY BE CAREFUL ABOUT THE LAMPS SIDE-EDGE.
 ・ 蛍光管の交換は作業仕様書に従って行って下さい。特に蛍光管ホルダ側面のエッジに気をつけて下さい。

Figure 14-2

15. PACKAGING

Separately specified in packaging specifications.

15-1 Packing specifications

- (1) 5 LCD modules/1package.
- (2) Weight:approximately 13kg/1package.
- (3) Outline dimensions:533mm (W)x308mm (D)x 468mm (H)

15-2 Packing method

Figure 15-1, 2 show the packing method.

16.WARRANTY

A

The warranty period is one year after shipping. Products which fail during this period are repaired or replaced without charge, unless the failure is caused by user.

A

17.PRECAUTIONS

Adhere to the following precautions to use this LCD module properly.

(1) Handling of LCD panel

B

① Do not apply any strong mechanical shock to the LCD panel.

Since the LCD panel is made of glass, excessive shock may damage the panel or cause a malfunction.

B

② Do not press hard on the LCD panel surface.

In the LCD panel, the gap between two glass plates is kept perfectly even to maintain display properties and reliability. The hard pressure on the LCD panel may cause the following problems.

- ① Ununiformity of color
- ② Disorder of orientation of liquid crystal

Problem ① returns to normal condition after a while. Problem ② returns to normal condition by turning the power off and turning on again.

However these operations should be avoided to insure reliability.

C

C

③ Do not scratch the polarizer film on the LCD panel surface.

- Do not press or rub the display surface with a hard tool, tweezers, etc.
- For handling, use cotton or conductive gloves so that the display surface is not soiled.
- If dust or dirt soils the display surface, clean it as follows with a soft cloth (deerskin, etc.)

[Dust] Wipe off with a soft cloth. (do not rub.)

[Dirt] Apply clear water to a soft cloth and squeeze hard out of water drops, then lightly wipe off the specified parts. Only if the dirt is hardly wiped off, use isopropyl alcohol or ethanol.

D

D

Be careful not to splash the water or the solvents on the edge of polarizer and in the LCD unit.

The polarizer possibly exfoliates due to the solvent and water penetrated between the polarizer and the LCD panel.

Do not use unspecified solvent such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)

(Caution) Be careful not to allow the water or solvent to enter the module.

- If saliva or water drops are left for a long period of time, the part may become deformed or discolored.

Wipe off immediately in the same way as for dirt.

- Do not allow oil to adhere to the module since excessive oil is hard to clean.

						26 /			

A

A

④ Do not place or contact objects on the display surface for a long period of time.

This may make some parts of the LCD module distorted and the quality of display may deteriorate.

(2) Handling of LCD module

① Do not pull the cold-cathode tube cable strongly.

If the cable is pulled with the strength of 2kg or more, the cable may be damaged or may lose reliability.

② Assemble the module into user's system in a dust free environment.

Conductive foreign matter adheres to the module may cause failures.

③ Take anti-electrostatic measures for assembling the module.

Since the LCD module contains CMOS-ICs, the following points should be observed.

- For assembling the module, operator should be grounded and wear cotton or conductive gloves.
- Floor of work area and work table to assemble the LCD module should be covered with electrostatic shielding in order to discharge static electricity via an earth wire.
- If necessary, ground operation tools (soldering iron, radio pliers, tweezers, etc.).
- Do not take the module out of the conductive bag until the module is assembled.
- Do not assemble the module under low humidity (50%RH or less).

④ Do not pull the connecting cable on the rear face of the LCD module strongly.

⑤ Do not disassemble or remodel the LCD module.

Disassembly or remodeling of the LCD module may result in malfunctions or deterioration of the display quality and reliability.

(3) Precautions in regards of operating the LCD module

① Adhere to the specified power supply sequence.

If not followed, the CMOS-IC may cause a latch-up, or DC voltage may be applied to the liquid crystal, which cause a failure or serious deterioration in display quality.

② Do not operate the LCD module when condensation occurs.

If the LCD module is operated when condensation is on the terminals of the LCD panel, the terminals cause electrochemical reaction, and may reach disconnection. Condensation easily occurs especially when the module is moved from cold environment to warm environment.

B

B

C

C

D

D

DOCUMENT CONTROL SECTION

DATE

E

F

						TITLE		FLC44SXC8V	
						DRAW. NO.		Tech Bes LCD-00028	
								CUST.	
EDIT	DATE	DESIG.	CHECK	APPR.	DESCRIPTION				
DESIG.			CHECK			APPR.		FUJITSU LIMITED	
								27 /	

A

③ The following troubles occur when the LCD module is not used under recommended temperature.

- Operation under high temperature(>50°C): Display colors shift to blue.
- Storage under high temperature(>60°C): The polarizer film deteriorates and contrast decreases.
- Operation under low temperature(< 0°C): The response speed decreases considerably.
- Storage under low temperature(<-20°C): The liquid crystal may solidify and become damaged.

B

④ Be sure to input the control signals at the correct timing.

If control signals (DCLK, ENAB) are not input, or if the timing is out of the specified timing, DC voltage may be applied to the liquid crystal and, as a result, cause image sticking or deterioration of contrast.

(4) Precautions in regards of designing module mounting

① Excessive force should not be applied to the screen or the rear side of the LCD module.

Excessive pressure on the screen caused by the installation of the LCD module may deteriorate display quality and reliability.
Brightness uniformity and the reliability of CCFL may decrease if the pressure is applied to the backlight module.

C

② Avoid twisting and bending the LCD module.

Excessive twist and bend may damage display quality and reliability.

③ Avoid extending the power cable between the LCD module and inverter.

This may cause the backlight to flicker or not to light.

④ Keep the backlight cable apart from the metal enclosure of the LCD module.

When frequency current for backlight driving leak to the metal enclosure, the desired brightness may not be assured.

D

⑤ When Mounting LCD module with M3 screws (x4), tighten the screws with torque below 4.5kgf.

⑥ When connecting CN-1 with M3 screws (x2), tighten the screws with torque below 2kgf.

(5) Storage method

① Do not store the LCD module in an atmosphere of organic solvent or corrosive gas.

In an organic solvent atmosphere, the polarizer film discolors and display quality deteriorates.
In a corrosive gas environment, various parts of the module may corrode or deteriorate.

② Store the LCD module in a Fujitsu package.

At storing, Fujitsu packages can be stacked up to 3 boxes.
The LCD module is in an anti-static bag. Keep the module in that status.

								28 /	

A

③ The LCD module is recommended to be stored in humidity controlled, cool and dark locations.

Recommended storage environment

- Place : Dark (avoid direct sunlight)
- Temperature : 10~35°C
- Humidity : 50~60%RH

Note) If the module is left in an environment of 60°C and above for a long period of time, optical characteristics may deteriorate.

B

(6) Disposal Method

① LCD module

The components of this LCD module can be grouped into metal, resin, glass and so on. As the backlight contains CCFL which includes mercury, it must be disposed according to the local ordinance or regulations.

② Package

All the packages are made of recyclable papers except the anti-ESD bag.

(7) Others

C

① If the LCD panel is damaged, do not inhale and do not swallow the liquid crystal.

If the liquid crystal adhere to the body or cloths, wash it off with soap immediately. Follow regular precautions for electronic components.

② Flux residue on the printed circuit board is harmless to the quality and reliability of LCD module.

Fujitsu has adopted non-wash technology on module assembly process.

D

18.OTHERS

Specifications of the TFT-LCD panel and other components used in this LCD module are subject to change.

Both parties shall discuss together and make the best effort to reach agreement in case of the rising of any doubt to the contents of the specifications.

This LCD module is not designed for the purpose where high reliability is required, such as for aero-space equipment, control system of nuclear power and medical life-support equipment.
