

**FODM3051**

**FODM3052**

**FODM3053**

**DESCRIPTION**

The FODM305X series consists of a gallium arsenide diode driving a silicon bilateral switch housed in a compact 4-pin mini-flat package. The lead pitch is 2.54 mm. The FODM305X series isolates low voltage logic from 115 and 240 Vac lines to provide random phase control of high current triacs or thyristors. It also features greatly enhanced static dv/dt capability to ensure stable switching performance of inductive loads.

**FEATURES**

- Compact 4-pin surface mount package (2.4 mm maximum standoff height)
- Peak blocking voltage – 600V
- Guaranteed static dv/dt of 1000 V/μs
- Available in tape and reel quantities of 500 and 2500.
- Applicable to Infrared Ray reflow (230°C max, 30 seconds.)
- BSI, CSA and VDE certifications pending
- UL (File# E90700) certified

**APPLICATIONS**

- Solenoid/valve controls
- Interfacing microprocessors to 115 and 240 Vac peripherals
- Temperature controls
- Solid state relays
- Lamp ballast
- Static AC power switch
- Motor control
- Incandescent lamp dimmers

**PACKAGE DIMENSIONS**

**NOTE**  
All dimensions are in inches (millimeters)

**ABSOLUTE MAXIMUM RATINGS** ( $T_A = 25^\circ\text{C}$  unless otherwise specified)

| Parameter  | Symbol       | Value       | Units    |
|--|--------------|-------------|----------|
| <b>TOTAL PACKAGE</b>   |              |             |          |
| Storage Temperature  | $T_{STG}$    | -40 to +125 | °C       |
| Junction Temperature   | $T_J$        | 125         | °C       |
| Operating Temperature  | $T_{OPR}$    | -40 to +85  | °C       |
| <b>EMITTER</b>   |              |             |          |
| Continuous Forward Current   | $I_F$ (avg)  | 60          | mA       |
| Peak Forward Current (1 μs pulse, 300 pps.)                            | $I_F$ (pk)   | 1           | A        |
| Reverse Input Voltage  | $V_R$        | 3           | V        |
| Power Dissipation<br>(No derating required over operating temp. range) | $P_D$        | 100         | mW       |
| <b>DETECTOR</b>  |              |             |          |
| On-State RMS Current   | $I_{T(RMS)}$ | 70          | mA (RMS) |
| Off-State Output Terminal Voltage                                      | $V_{DRM}$    | 600         | V        |
| Power Dissipation<br>(No derating required over operating temp. range) | $P_D$        | 250         | mW       |

|-----------------------------------|-------------------------------------|-----------------|----------|-----|------|-----|---------------|
| LED Trigger Current               | Main Terminal Voltage = 3V (note 3) | $I_{\text{FT}}$ | FODM3051 |     |      | 15  | mA            |
|                                   |                                     |                 | FODM3052 |     |      | 10  |               |
|                                   |                                     |                 | FODM3053 |     |      | 5   |               |
| Holding Current, Either Direction |                                     | $I_H$           | All      |     | 300  |     | $\mu\text{A}$ |

**ISOLATION CHARACTERISTICS** ( $T_A = 25^\circ\text{C}$  Unless otherwise specified)

| Characteristic                 | Test Conditions       | Symbol           | Device | Min  | Typ* | Max | Unit   |
|--------------------------------|-----------------------|------------------|--------|------|------|-----|--------|
| Steady State Isolation Voltage | $t = 1\text{ Minute}$ | $V_{\text{ISO}}$ | All    | 3750 |      |     | V(RMS) |

\* All typicals at  $T_A = 25^\circ\text{C}$

Note

1. Test voltage must be applied within  $dv/dt$  rating.
2. This is static  $dv/dt$ . See Figure 1 for test circuit. Commutating  $dv/dt$  is function of the load-driving thyristor(s) only.
3. All devices are guaranteed to trigger at an  $I_F$  value less than or equal to max  $I_{\text{FT}}$ . Therefore, recommended operating  $I_F$  lies between max  $I_{\text{FT}}$  (15 mA for FODM3051, 10 mA for FODM3052, 5 mA for FODM3053) and absolute max  $I_F$  (60 mA).

Fig. 7 On-State Characteristics

1. The mercury wetted relay provides a high speed repeated pulse to the D.U.T.
2. 100x scope probes are used, to allow high speeds and voltages.
3. The worst-case condition for static dv/dt is established by triggering the D.U.T. with a normal LED input current, then removing the current. The variable R<sub>TEST</sub> allows the dv/dt to be gradually increased until the D.U.T. continues to trigger in response to the applied voltage pulse, even after the LED current has been removed. The dv/dt is then decreased until the D.U.T. stops triggering. τ<sub>RC</sub> is measured at this point and recorded.

**FODM3051**

**FODM3052**

**FODM3053**

**Recommended Infrared Reflow Soldering Profile**

- Peak reflow temperature: 230°C (package surface temperature) for 30 seconds
- Time of temperature higher than 210°C: 60 seconds or less
- One time soldering reflow is recommended
