- DESCRIPTION AND APPLICATIONS

The FPD1000V is a discrete depletion mode AlGaAs/InGaAs pseudomorphic High Electron Mobility Transistor (pHEMT), optimized for power applications in L- and C-Bands. The FPD1000V includes Source plated thru-vias, and does not require wire bonds to the Source.

Typical applications include drivers or output stages in PCS/Cellular base station transmitter amplifiers, as well as other power applications in WLL/WLAN amplifiers.

Storage Temperature	T_{STG}	Non-Operating Storage	-40	150	ºC
Total Power Dissipation	P_{TOT}	See De-Rating Note below		7.0	W
Gain Compression	Comp.	Under any bias conditions		5	dB
Simultaneous Combination of Limits[3]		2 or more Max. Limits		80	%

[1]$T_{Ambient}$ = 22°C unless otherwise noted [2]Max. RF Input Limit must be further limited if input VSWR > 2.5:1
[3]Users should avoid exceeding 80% of 2 or more Limits simultaneously

Notes:
- Operating conditions that exceed the Absolute Maximum Ratings could result in permanent damage to the device.
- Thermal Resitivity specification assumes a Au/Sn eutectic die attach onto a Au-plated copper heatsink or rib.
- Power Dissipation defined as: $P_{TOT} \equiv (P_{DC} + P_{IN}) - P_{OUT}$, where
  P_{DC}: DC Bias Power
  P_{IN}: RF Input Power
  P_{OUT}: RF Output Power
- Absolute Maximum Power Dissipation to be de-rated as follows above 22°C:
  P_{TOT}= 7.0W – (0.046W/°C) x T_{HS}
  where T_{HS} = heatsink or ambient temperature above 22°C

Example: For a 85°C heatsink temperature: P_{TOT} = 7.0W – (0.046 x (85 – 22)) = 4.1W

- HANDLING PRECAUTIONS
  To avoid damage to the devices care should be exercised during handling. Proper Electrostatic Discharge (ESD) precautions should be observed at all stages of storage, handling, assembly, and testing. This product has be tested to Class 1A (> 250V but < 500V) using JESD22 A114, Human Body Model, and to Class A, (< 200V) using JESD22 A115, Machine Model.

- ASSEMBLY INSTRUCTIONS
  The recommended die attach is gold/tin eutectic solder under a nitrogen atmosphere. Stage temperature should be 280-290°C; maximum time at temperature is one minute. The recommended wire bond method is thermo-compression wedge bonding with 1.0 mil (0.025 mm) gold wire. Stage temperature should be 250-260°C.

- APPLICATIONS NOTES & DESIGN DATA
  Applications Notes are available from your local Filtronic Sales Representative or directly from the factory. Complete design data, including S-parameters, noise data, and large-signal models are available on the Filtronic web site.

- BONDING DIAGRAM

  Note: 25 µm (0.001 in.) gold wire is recommended. No Source wire bonds are needed, device features Source thru-vias.
