ABSOLUTE MAXIMUM RATING[1]:

PARAMETER	SYMBOL	TEST CONDITIONS	ABSOLUTE MAXIMUM
Drain-Source Voltage	VDS	-3V < VGS < -0.5V [6]	10V
Gate-Source Voltage	VGS	0V < VDS < +10V	-3V
Drain-Source Current	IDS	For VDS < 2V	IDss
Gate Current	IG	Forward or reverse current	10mA
RF Input Power	PIN	Under any acceptable bias state	20dBm
Channel Operating Temperature	TCH	Under any acceptable bias state	175°C
Storage Temperature	TSTG	Non-Operating Storage	-65°C to 150°C
Total Power Dissipation	PTOT	See De-Rating Note below	1.2W
Simultaneous Combination of Limits [4]		2 or more Max. Limits	80%

Notes:
[1] $T_{Ambient}$ = 22°C unless otherwise noted; exceeding any one of these absolute maximum ratings may cause permanent damage to the device
[2] Total Power Dissipation defined as: $P_{TOT} \equiv (P_{DC} + P_{IN}) - P_{OUT}$,
where P_{DC}: DC Bias Power, P_{IN}: RF Input Power, P_{OUT}: RF Output Power
[3] Total Power Dissipation to be de-rated as follows above 22°C:
P_{TOT}= 1.2 - (0.008W/°C) x T_{HS}
where T_{HS}= heatsink or ambient temperature above 22°C
Example: For a 85°C carrier temperature: P_{TOT} = 1.2 - (0.008 x (85 – 22)) = 0.69W
[4] Users should avoid exceeding 80% of 2 or more Limits simultaneously
[5] Thermal Resistivity specification assumes a Au/Sn eutectic die attach onto a Au-plated copper heatsink or rib.
[6] Operating at absolute maximum VD continuously is not recommended. If operation at 10V is considered then IDS must be reduced in order to keep the part within it's thermal power dissipation limits. Therefore VGS is restricted to < -0.5V.

Preferred Assembly Instructions:

GaAs devices are fragile and should be handled with great care. Specially designed collets should be used where possible.

The recommended die attach is gold/tin eutectic solder under a nitrogen atmosphere. Stage temperature should be 280-290°C; maximum time at temperature is one minute. The recommended wire bond method is thermo-compression wedge bonding with 0.7 or 1.0 mil (0.018 or 0.025 mm) gold wire. Stage temperature should be 250-260°C.

Handling Precautions:

To avoid damage to the devices care should be exercised during handling. Proper Electrostatic Discharge (ESD) precautions should be observed at all stages of storage, handling, assembly, and testing. These devices should be treated as Class 0 (0-250 V) as defined in JEDEC Standard No. 22-A114. Further information on ESD control measures can be found in MIL-STD-1686 and MIL-HDBK-263.
