

Radiation Hardened, SEGR Resistant N-Channel Power MOSFETs

Intersil Star*Power Rad Hard MOSFETs have been specifically developed for high performance applications in a commercial or

military space environment. Star*Power MOSFETs offer the system designer both extremely low $r_{DS(ON)}$ and Gate Charge allowing the development of low loss Power Subsystems. Star*Power FETs combine this electrical capability with total dose radiation hardness up to 300K RADs while maintaining the guaranteed performance for SEE (Single Event Effects) which the Intersil FS families have always featured.

The Intersil portfolio of Star*Power FETS includes a family of devices in various voltage, current and package styles. The Star*Power family consists of Star*Power and Star*Power Gold products. Star*Power FETS are optimized for total dose and $r_{DS(ON)}$ performance while exhibiting SEE capability at full rated voltage up to an LET of 37. Star*Power Gold FETS have been optimized for SEE and Gate Charge providing SEE performance to 80% of the rated voltage for an LET of 82 with extremely low gate charge characteristics.

This MOSFET is an enhancement-mode silicon-gate power field effect transistor of the vertical DMOS (VDMOS) structure. It is specifically designed and processed to be radiation tolerant. The MOSFET is well suited for applications exposed to radiation environments such as switching regulation, switching converters, power distribution, motor drives and relay drivers as well as other power control and conditioning applications. As with conventional MOSFETs these Radiation Hardened MOSFETs offer ease of voltage control, fast switching speeds and ability to parallel switching devices.

Reliability screening is available as either, TXV or Space equivalent of MIL-S-19500.

Formerly available as type TA45210W.

Ordering Information

RAD LEVEL	SCREENING LEVEL	PART NUMBER/BRAND
10K	Engineering samples	FSPYE230D1
100K	TXV	FSPYE230R3
100K	Space	FSPYE230R4
300K	TXV	FSPYE230F3
300K	Space	FSPYE230F4

Features

- 12A, 200V, $r_{DS(ON)} = 0.140\Omega$
- UIS Rated
- Total Dose
 - Meets Pre-RAD Specifications to 100K RAD (Si)
 - Rated to 300K RAD (Si)
- Single Event
 - Safe Operating Area Curve for Single Event Effects
 - SEE Immunity for LET of 36MeV/mg/cm² with V_{DS} up to 100% of Rated Breakdown and V_{GS} of 10V Off-Bias
- Dose Rate
 - Typically Survives 3E9 RAD (Si)/s at 80% BV_{DSS}
 - Typically Survives 2E12 if Current Limited to I_{AS}
- Photo Current
 - 3.0nA Per-RAD (Si)/s Typically
- Neutron
 - Maintain Pre-RAD Specifications for 1E13 Neutrons/cm²
 - Usable to 1E14 Neutrons/cm²
