

## FSUSB23

# Low Power Hi-Speed USB 2.0 (480Mbps) Switch

### General Description

The FSUSB23 is a low power high bandwidth analog switch specifically designed for high speed USB 2.0 applications. The FSUSB23 features very low quiescent current even when the control voltage is lower than the  $V_{CC}$  supply. This feature services mobile handset applications well allowing for direct interface with the baseband processor general purpose I/Os. Typical applications involve switching in portables and consumer applications such as cell phones, digital cameras, and notebooks with hubs or controllers. The wide bandwidth (>720MHz) of this switch exceeds the bandwidth needed to pass the 3<sup>rd</sup> harmonic which results in signals with minimum edge and phase distortion. Superior channel-to-channel crosstalk results in minimal interference.

### Features

- 10 $\mu$ A maximum  $I_{CCT}$  current over an expanded control voltage range ( $V_{IN} = 2.6V$ ,  $V_{CC} = 3.6V$ )
- Lower Capacitance:  $C_{on} = 9pF$  Typ
- 7 $\Omega$  typical On Resistance ( $R_{ON}$ )
- -3dB bandwidth: > 720MHz
- Low power consumption (1 $\mu$ A maximum)
- Packaged in:
  - Pb-Free 10-lead MicroPak™ (1.6mm by 2.1mm)
  - Pb-Free 16-lead DQFN
- 7kV I/O to GND ESD performance

### Applications

- Cell phone, PDA, Digital Camera, and Notebook
- LCD Monitor, TV, and Set-top Box

**Note 1:** The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The Recommended Operating Conditions tables will define the conditions for actual device operation.

**Note 2:** The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed. DC switch voltage may never exceed 4.6V.

**Note 3:** Control input must be held HIGH or LOW and it must not float.
