

Helping Customers Innovate, Improve & Grow

Description

The FX-402 is a precision quartz-based frequency translator used to translate 1 to 4 selected input clocks as low as 8 kHz to an integer multiple as high as 850 MHz. The FX-402's superior jitter performance is achieved through the filtering action of the on-board voltage-controlled SAW oscillator (VCISO) and integrated loop filter. Two low-jitter outputs are provided. Monitoring and control functionality are also standard features.

Features

- Quartz-based PLL for Ultra-Low Jitter
- Frequency Translation up to 850 MHz
- Accepts 4 externally-mixed clock inputs
- LVCMOS/LVDS/LVPECL Inputs Compatible
- Differential LVPECL Outputs
- Lock Detect
- Output Disable
- 20.3 x 13.7 x 5.1 mm surface mount package

Compliant to EC RoHS Directive

Applications

- Wireless Infrastructure
- 802.16 BTS
- 10 Gigabit FC
- 10GbE LAN / WAN
- OADM and IP Routers
- Test Equipment

1. See Standard Frequencies and Ordering Information.

2. Parameters are tested with production test circuit below (Fig 2).

3. Parameters are tested at ambient temperature with test limits guard banded for specified operating temperature.

4. Measured from 20% to 80% of a full output swing (Fig 3).

5. Not tested in production, guaranteed by design, verified at qualification.

6. The FX-402 phase noise and jitter performance can be optimized for specific applications. Please consult with Vectron's Application Engineers for more information.

7. LVC MOS input signal levels are valid for input frequencies < 100 MHz.

Test Circuit Notes:
 1) To Permit 50Ω Measurement of Outputs, all DC Inputs are Biased Down 1.3V.
 2) All Voltage Sources Contain Bypass Capacitors to Minimize Supply Noise.
 3) 50Ω Terminations are Within Test Equipment.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied at these or any other conditions in excess of conditions represented in the operational sections of this data sheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability.

Table 2. Absolute Maximum Ratings

Parameter	Symbol	Ratings	Unit
Power Supply	V_{DD}	6	V
Storage Temperature	T_{STR}	-55 to 125	°C
Soldering Tewmp/Tlme	T_{LS}	260/40	°C/sec

Reliability

The FX-402 is capable of meeting the following qualification tests

Table 3. Environmental Compliance

Parameter	Conditions
Mechanical Shock	MIL-STD-883, Method 2002
Mechanical Vibration	MIL-STD-883, Method 2007

Handling Precautions

Although ESD protection circuitry has been designed into the the FX-402, proper precautions should be taken when handling and mounting. VI employs a human body model and a charged-device model (CDM) for ESD susceptibility testing and design protection evaluation. ESD thresholds are dependent on the circuit parameters used to define the model. Although no industry wide standard has been adopted for the CDM, a standard HBM of resistance=1.5Kohms and capacitance = 100pF is widely used and therefore can be used for comparison purposes

Table 4. Predicted ESD R\$atings

Model	Minimum	Conditions
Human Body Model	500 V	MIL-STD 883, Method 3015

The FX-402 is qualified to meet the JEDEC standard for Pb-Free assembly. The temperatures and time intervals listed are based on the Pb-Free small body requirements. The temperatures refer to the topside of the package, measured on the package body surface. The FX-402 should not be subjected to a wash process that will immerse it in solvents. NO CLEAN is the recommended procedure. The FX-402 has been designed for pick and place reflow soldering. The FX-402 may be reflowed once and should not be reflowed in the inverted position.
