General Description

The G3601 is a single inverter gate with high speed. It's designed for 1.65V to 5.5V V_{cc} operation, and low power consumption. The G3601 performs the Boolean function $Y = \overline{A}$. This device is fully specified for partial-power-down applications using I_{off} . The I_{off} circuitry disables the output, preventing damaging current backflow through the device when it is power down.

The G3601 is available in the WLCSP2X2-4 package.
