General Description

G5385A is a 8A, synchronous DC/DC buck converter with integrated 30mΩ N-channel high-side MOSFET and 15mΩ N-channel low-side MOSFET. It uses constant on-time control scheme to handle wide input/output voltage ratios with ease and provides 100ns "instant-on" response to load transients while maintaining a relatively constant switching frequency. The G5385A achieves high efficiency at a reduced cost by eliminating the current-sense resistor found in traditional current-mode PWMs. Single-stage buck conversion allows these devices to directly step down high-voltage batteries for the highest possible efficiency. The G5385A is intended for the power supply of Notebook Computer, or other low-voltage supplies as low as 0.75V. The G5385A is available in QFN4X4-28 package.

Applications

- Notebook Computers
- I/O Supply
- Chipset/RAM Supply as Low as 0.75V
- Networking Power Supply
