

GD54/74HC113, GD54/74HCT113

DUAL J-K FLIP-FLOPS WITH PRESET

General Description

These devices are identical in pinout to the 54/74LS113. They consist of two J-K flip-flops with individual J, K, Clock, and Preset inputs. These flip-flops are edge sensitive to the clock input and change state on the negative going transition of the clock pulse. Both Q and \bar{Q} outputs are available from each flip-flop. Preset is independent of the Clock and accomplished by a Low level on the input. These devices are characterized for operation over wide temperature ranges to meet industry and military specifications.

Features

- Low Power consumption characteristic of CMOS devices
- Output drive capability: 10 LS TTL Loads Min.
- Operating speed superior to LS TTL
- Wide operating voltage range: for HC 2 to 6 volts for HCT 4.5 to 5.5 volts
- Low input current: $1\mu\text{A}$ Max.
- Low quiescent current: $40\mu\text{A}$ Max. (74HC)
- High noise immunity characteristic of CMOS
- Diode protection on all inputs.
