

TECHNICAL LITERATURE
FOR
Optical Data communication transceiver

MODEL No. GP2W0110YP.

DATE April, 18, 2000

1. These technical literature sheets include materials protected under copyright of Sharp Corporation ("Sharp"). Please do not reproduce or cause anyone to reproduce them without Sharp's consent.
2. When using this product, please observe the absolute maximum ratings and the instructions for use outlined in these specification sheets, as well as the precautions mentioned below. Sharp assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets, and the precautions mentioned below.

(Precautions)

- (1) This product is designed for use in the following application areas ;

[• OA equipment • Audio visual equipment • Home appliances
• Telecommunication equipment (Terminal) • Measuring equipment
• Tooling machines • Computers]

If the use of the product in the above application areas is for equipment listed in paragraphs (2) or (3), please be sure to observe the precautions given in those respective paragraphs.

- (2) Appropriate measures, such as fail-safe design and redundant design considering the safety design of the overall system and equipment, should be taken to ensure reliability and safety when this product is used for equipment which demands high reliability and safety in function and precision, such as ;

[• Transportation control and safety equipment (aircraft, train, automobile etc.)
• Traffic signals • Gas leakage sensor breakers • Rescue and security equipment
• Other safety equipment]

- (3) Please do not use this product for equipment which require extremely high reliability and safety in function and precision, such as ;

[• Space equipment • Telecommunication equipment (for trunk lines)
• Nuclear power control equipment • Medical equipment]

- (4) Please contact and consult with a Sharp sales representative if there are any questions regarding interpretation of the above three paragraphs.

3. Please contact and consult with a Sharp sales representative for any questions about this product.

MODEL No. GP2W0110YP	PAGE 1/15

1. Application

This specification applies to the outline and characteristics of IrDA1.2 type
(Data rate 2.4kbps to 115.2kbps, Low Power Option compliant)
Optical Data communication transceiver, Model No. GP2W0110YP.

2. Outline

Refer to the attached drawing No. CY10236i02A, page 8.

3. Ratings and characteristics

Refer to the attached sheet, page 9 to 13.

4. Reliability

Refer to the attached sheet, page 14.

5. Incoming inspection

Refer to the attached sheet, page 15.

6. Supplements

- 1) This optical data communication transceiver is satisfied with each characteristics of item 3.3. in the optical system shown in ※3, ※5.
- 2) This product is built-in photodiode.
- 3) This device confirms eye safety IEC60825-1 class 1, and also without external resistor.
- 4) Taping specification : Refer to the attached sheets-2-1 to 2-3.
- 5) Taping moisture-proof package : Refer to the attached sheets-2-4, 2-5.
- 6) This product shall not contain the following materials.
Also, the following materials shall not be used in the production process for this product.

Materials for ODS : CFC_S, Halon, Carbon tetrachloride
1.1.1-Trichloroethane (Methylchloroform)

7) Brominated flame retardants

Specific brominated flame retardants such as the PBBO_S and PBB_S are not used in this device at all.

8) Package specifications : Refer to the attached sheet-3

7. Notes

1) If the surface of detector is smeared with dust or dirt, it may cause faulty operation. Caution shall be taken to avoid this. And do not touch the detector surface.

2) Cleaning conditions :

Solvent cleaning : Solvent temperature 45°C or less
Immersion for 3 min or less

Ultrasonic cleaning : The effect to device by ultrasonic cleaning differs by cleaning bath size, ultrasonic power output, cleaning time, PCB size or device mounting condition etc. Please test it in actual using condition and confirm that doesn't occur any defect before starting the ultrasonic cleaning.

The cleaning shall be carried out with solvent below.

Solvent : Ethyl alcohol, Methyl alcohol, Isopropyl alcohol

3) In order to prevent electrostatic discharge of integrated circuit, human body and soldering iron, etc. shall be grounded.

4) In case that things touch to the device after mounting, such external force is applied to the device, there is possibility to be caused the mounting defect such as terminal coming off. Please be careful for handling.

5) Precautions for Soldering

Refer to the attached sheet-1.

6) When the system (program) is designed, the Turn Around Time shall be designed by considering 200 μ s or more that is specified by IrDA.
Then, this Turn Around Time means the time when this device does not temporarily defect the signal light, since the transmitted light from the transceiver reaches the detector side of the same transceiver.

7) As it is necessary 200 μ s or more (at Ta=25°C, no input signal) to return from shut-down mode to ready-operation mode, please consider this point at the system (program) designing.
Also, please confirm thoroughly the operation in accrual application.

- 8) When there is much external disturbing light or the light source is located near this transceiver and the detector face receives much external disturbing light, there is a case that the pulse other than signal output is generated as noise on output terminal of this transceiver. Please consider the lay-out and structure to reduce disturbing light on the detector face.
- 9) In case that this sensor is adopted in IR communication system, please use it according to the signal method which is specified by 『Serial Infrared Physical Layer Link Specification Version 1.2』 published by the Infrared Data Association. Faulty operation may happen, if different signal method than specified one is used.
- 10) RXD pinout remains at High level output(pullup output) in shutdown mode.
- 11) In circuit designing, make allowance for the degradation of the light emitting diode output that results from long continuous operation. (50% degradation/ 5 years)
- 12) Recommended external circuit

Components	Recommended values
CX	3.3 μ F/6.3V (Note)

(Note) Please choose the most suitable CX according to the noise level and noise frequency of power supply.

Pin 1 and Pin 2 are not connected internally.

In the test *mark above, the sample to be tested shall be left at normal temperature and humidity for 2h after it is taken out of the chamber. (No dew point)

5. Incoming inspection

(1) Inspection lot

Inspection shall be carried out per each delivery lot.

(2) Inspection method

A single sampling plan, normal inspection level II based on ISO 2859 shall be adopted.

Parameter		Inspection items and test method	AQL(%)	
Major defect	1	Disconnection, short	0.1	
	2	Inverse polarity on terminal		
	3	Soldering defect (Obstacle to use)		
	4	Electrical characteristic defect in parameter 3.3.		
Minor defect	1	Appearance defect	0.25	
		Parameter		Judgement criteria
		Split, Chip, Scratch, Stain, Blur		One which affects the characteristics of parameter 3.3 shall be defect.

Precautions for Soldering

1. In case of solder reflow

Please carry out only one time soldering at the temperature and the time within the temperature profile as shown in the figure below.

2. Other precautions

An infrared lamp used to heat up for soldering may cause a localized temperature rise in the resin. So keep the package temperature within that specified in Item 1. Also avoid immersing the resin part in the solder. Even if within the temperature profile above, there is the possibility that the gold wire in package is broken in case that the deformation of PCB gives the affection to lead pins. Please use after confirmation the conditions fully by actual solder reflow machine.

3. Soldering

- Soldering time shall be within 5s.
- Soldered product shall treat at normal temperature.
- Solder : 6/4 solder or included Ag solder.

Taping specifications

1. Application

This packing specification sheets specify the taping specifications for GP2W0106YP.

2. Taping method

2-1. Tape structure and Dimensions (Refer to the attached sheets-2-2.)

The tape shall have a structure in which a cover tape is sealed heat-pressed on the carrier tape of conductive PET.

2-2. Reel structure and Dimensions (Refer to the attached sheets-2-3.)

The taping reel shall be conductive plastic with its dimensions as shown in the attached drawing.

2-3. Direction of product insertion (Refer to the attached sheets-2-3.)

Product direction in carrier tape shall be that electrode side of product places on the cover tape side and lens side of product places on the hold side of the tape.

2-4. The way to repair taped failure devices

The way to repair taped failure devices cut a bottom of carrier tape with a cutter, and after replacing to good devices, the cutting portion shall be sealed with adhesive tape.

3. Adhesiveness of cover tape

The exfoliation force between carrier tape and cover tape shall be 0.2N to 1N for the angle from 160° to 180° .

4. Rolling method and quantity

Wind the tape back on the reel so that the cover tape will be outside the tape. Attach more than 20cm of blank tape to the trailer and the leader of the tape and fix the both ends with adhesive tape. One reel shall contain 2000pcs.

5. Safety protection during shipping

There shall be no deformation of component or degradation of electrical characteristics due to shipping.

Taping moisture-proof packing

1. Application

This packing specification sheets apply to the moist-proof packing for the GP2W0106YP in the taping package.

2. Packaging specifications

2.1 Packaging material

Name	Material	Q'ty
Aluminum laminate bag	Aluminum polyethylene	Refer to 2.2
Label	Paper(-made)	-
Siccative	-	-
Outer case	Paper	-
Pads	Paper	-

2.2 Packaging method

- (1) Seal the aluminum laminated bag that contains tape reel (contains 2,000 devices per reel) and siccative.
- (2) Fill necessary information to the label and paste it on the aluminum laminate bag.
- (3) Pack 4 aluminum laminated bags (contains 1 reel each) into the designated outer case, where paper pads are placed on the bottom and top of the outer case, as well as each layer of the aluminum laminated bags.

Package shape	Product	Q'ty	Moisture-proof sack Q'ty
Tape reel (φ 330mm)	1 model	2000pcs./reel	1reel/laminated bag

Minimum order/shipment q'ty should be 1 laminated bag.

- (4) The outer case would be then sealed with the craft tape, with indication of model name, quantity, and outgoing inspection date on the case.
(total of 8,000pcs. per carton)

3. Storage and Treatment after Unsealed

3.1 Storage conditions

The delivered product should be stored with the conditions shown below;

Storage temperature : 10 to 30°C

Humidity : below 60%RH

3.2 Treatment after open

- (1) After unsealed, devices should be mounted under the temperature condition of 10 to 30°C, at the humidity condition of below 60%RH, within 2 days.
- (2) In case that long term storage is needed, devices should either be stored in dry box, or re-sealed to moist-proof bag with siccative and leave them in the environment where the temperature is 10 to 30°C, at the humidity condition of below 60%RH. Devices must be mounted within 2 weeks.

3.3 Baking before mounting

In the event that the devices are not maintained in the storage conditions described above, or the enclosed siccative indicator already turned its color to pink, baking must be applied before devices are to be mounted: Please also note that baking should only be applied once.

Recommended condition : 100°C, 12 to 24 hours

- * Baking will not properly done in packing condition. To complete the baking properly, devices should either be temporary mounted to PCB with adhesive, or placed to the metal tray.

(The temporary mounting shall not be done by soldering, but by adhesive etc.)

Package method

- (1) Seal the aluminum laminated bag included the tape reel with 2000pcs. and siccative. 〈Fig.1〉
- (2) Fill up the model name, quantity etc. in the blank of label and paste on the bag. 〈Fig.2〉
- (3) Put the four moisture-proof laminated bag in the ruled case.
Put the pad between the bags, and top and bottom. 〈Fig.3〉
- (4) The case seals with craft tape, and indicate model name and quantity. 〈Fig.4〉
(8000pcs./package)
