

GP34063

DC TO DC CONVERTER CONTROLLER

Description

The GP34063 is a monolithic regulator subsystem, intended for use as DC to DC converter. This device contains a temperature compensated band gap reference, a duty-cycle control oscillator, driver and high current output switch. It can be used for step down, step-up or inverting switching regulators as well as for series pass regulators.

Features

- *Operation from 3.0V to 40V.
- *Short circuit current limiting.
- *Low standby current.
- *Output switch current of 1.5A without external transistors.
- *Frequency of operation from 100Hz to 100kHz.
- *Step-up, step-down or inverting switch regulators.

External NPN Switch

External NPN Saturated Switch (NOTE)

NOTE : If the switch is driven into hard saturation (non-Darlington configuration) at low switch currents ($\leq 300mA$) and high driver currents ($\geq 30mA$) it may take up to 2.0 us to come out of saturation. This condition will shorten the off time at frequencies $\geq 30kHz$, and is magnified at high temperatures. This condition does not occur with a Darlington configuration, since the output switch cannot saturate. If a non-Darlington configuration is used, the following output drive condition is recommended.

Step-Down Converter
