

2W isolated DC-DC converter with 6000VDC
Fixed input voltage, unregulated positive-negative
dual/single output

Patent Protection RoHS

FEATURES

- SIP package
- High efficiency up to 86%
- I/O isolation test voltage 6k VDC
- Operating ambient temperature range: -40°C ~ +105°C
- Continuous short-circuit protection
- Internal surface mounted design
- Industry standard pin-out

G_S-2W & H_S-2W series is specially designed for applications where an isolated voltage is required in a distributed power supply system. It is suitable for:

1. Where the voltage of the input power supply is stable (voltage variation: $\pm 10\%V_{in}$);
 2. Where isolation is necessary between input and output (isolation voltage $\leq 6000VDC$);
 3. Where do not has high requirement of line regulation and the ripple & noise of the output voltage;
- Such as: pure digital circuits, low frequency analog circuits, IGBT-driven circuits, etc.

Design Reference

1. Typical application

Input and/or output ripple can be further reduced, by connecting a filter capacitor from the input and/or output terminals to ground as shown in Fig.2.

Choosing suitable filter capacitor values is very important for a smooth operation of the modules, particularly to avoid start-up problems caused by capacitor values that are too high. For recommended input and output capacitor values refer to Table 1.

The simplest device for output voltage regulation, over-voltage and over-current protection is a linear voltage regulator with overheat protection that is connected to the input or output end in series (see Fig. 4).

Recommended capacitive load value table (Table 1)

Vin (VDC)	Cin (μF)	Single Vout (VDC)	Cout (μF)	Dual Vout (VDC)	Cout (μF)
5	10	3.3/5	10	±5	4.7
12	4.7	9	4.7	±9	2.2
24	2.2	12	2.2	±12	1
-	-	15	1	±15/±24	0.47

It is not recommended to connect any external capacitor when output power is less than 0.5W.

2. EMC (CLASS B) compliance circuit

Recommended typical circuit parameters:

Input voltage (V)	5/12/24	
EMI	C1,C2	4.7μF /50V
	C3	Refer to the Cout in Fig.3
	LDM	6.8μH

3. Output load requirements

For a reliable and efficient operation of the converter, the minimum load should never be less than 10% of the rated output load. If the total required output power is below 10%, a parallel bleeding resistor is required on the output, ensuring that the sum of the power consumption is always maintained at 10% minimum.

Notes:

- For additional information on Product Packaging please refer to www.mornsun-power.com. Packaging bag number: 58200013;
- If the product is operated under the min. required load, the product performance cannot be guaranteed to comply with all performance indexes in this datasheet;
- The max. capacitive load should be tested within the input voltage range and under full load conditions;
- Unless otherwise specified, parameters in this datasheet were measured under the conditions of $T_a=25^{\circ}\text{C}$, humidity<75%RH with nominal input voltage and rated output load;
- All index testing methods in this datasheet are based on our company corporate standards;
- The performance indexes of the product models listed in this manual are as above, but some indexes of non-standard model products will exceed the above-mentioned requirements, and please directly contact our technicians for specific information;
- We can provide product customization service, please contact our technicians directly for specific information;
- Products are related to laws and regulations: see "Features" and "EMC";
- Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
