

HA12226F/HA12227F

Audio Signal Processor for Cassette Deck (Dolby B-type NR with Recording System)

REJ03F0133-0600
Previous: ADE-207-270E
Rev.6.00
Jun 15, 2005

Description

The HA12226F/HA12227F are silicon monolithic bipolar IC providing Dolby noise reduction system*¹, music sensor system, REC equalizer system and each electronic control switch in one chip.

Note: 1. Dolby is a trademark of Dolby Laboratories Licensing Corporation.
A license from Dolby Laboratories Licensing Corporation is required for the use of this IC.
The HA12227F is not built-in Dolby B-NR.

Functions

- Dolby B-NR*² × 2 channel
- REC equalizer × 2 channel
- Music sensor × 1 channel
- Pass amp. × 2 channel
- Each electronic control switch to change REC equalizer, bias, etc.

Note: 2. The HA12227F is not built-in Dolby B-NR.

Features

- REC equalizer is very small number of external parts and have 4 types of frequency characteristics built-in.
- 2 types of input for PB, 1 type of input for REC.
- 70μ - PB equalizer changing system built-in.
- Dolby NR*² with dubbing double cassette decks.
Unprocessed signal output available from recording out terminals during PB mode.
- Provide stable music sensor system, available to design music sensing time and level.
- Controllable from direct micro-computer output.
- Bias oscillator control switch built-in.
- NR ON / OFF and REC / PB fully electronic control switching built-in.
- Normal-speed / high-speed, Normal / Crom and PB equalizer fully electronic control switching built-in.
- Available to reduce substrate-area because of high integration and small external parts.

Ordering Information

Operating Voltage

Product	Power Supply Range (Single Supply)
HA12226F	11.0 V to 15.0 V
HA12227F	9.5 V to 15.0 V

Standard Level

Product	Package Code	PB-OUT Level	REC-OUT Level	Dolby Level
HA12226F	FP-56A	580 mVrms	300 mVrms	300 mVrms
HA12227F				—

Function

Product	Dolby B-NR	REC-EQ	Music Sensor	Pass Amp.	REC / PB Selection	ALC
HA12226F	○	○	○	○	○	○
HA12227F	×	○	○	○	○	○

Note: Depending on the employed REC / PB head and test tape characteristics, there is a rare case that the REC-EQ characteristics of this LSI can not be matched to the required characteristics because of built-in resistors which determined the REC-EQ parameters in this case, please inquire the responsible agent because the adjustment built-in resistor is necessary.

Difference of HA12215F and HA12226F/HA12227F

Product	Supply Voltage	Tape Correspondence		
		NORM	CROM	METAL
HA12226F/HA12227F	Single supply voltage	○	○	×
HA12215F	Split supply voltage	○	○	○

Note: The HA12226F/HA12227F became single power supply for the HA12215F and deleted metal correspondence.
The HA12227F is not built-in Dolby B-NR.
Other characteristic aspects are similar as the HA12215F.

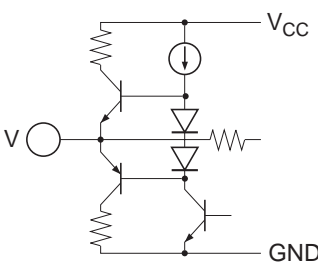

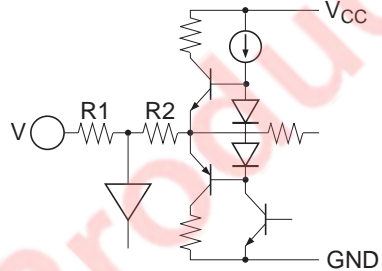

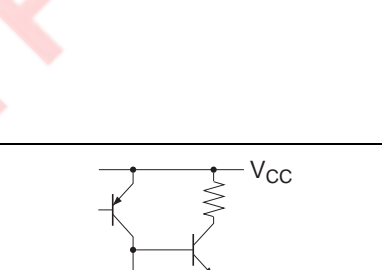

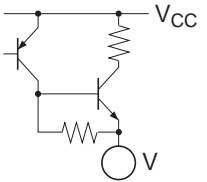

Pin Description, Equivalent Circuit

($V_{CC} = 12\text{ V}$, A system of single supply voltage, $T_a = 25^\circ\text{C}$, No Signal, The value in the show typical value.)

Pin No.	Terminal Name	Note	Equivalent Circuit	Pin Description
51	AIN (R)	$V = V_{CC} / 2$		PB A Deck input
48	AIN (L)			PB B Deck input
53	BIN (R)			REC input
46	BIN (L)			REC equalizer input

Functional Description

Power Supply Range

These ICs are designed to operate on single supply.

Table 1 Supply Voltage

Product	Power Supply Range (Single Supply)
HA12226F	11.0 V to 15.0 V
HA12227F	9.5 V to 15.0 V

Note: The lower limit of supply voltage depends on the line output reference level.

The minimum value of the overload margin is specified as 12 dB by Dolby Laboratories (Dolby IC HA12226F).

Reference Voltage

The reference voltage are provided for the left channel and the right channel separately. The block diagram is shown as figure 1.

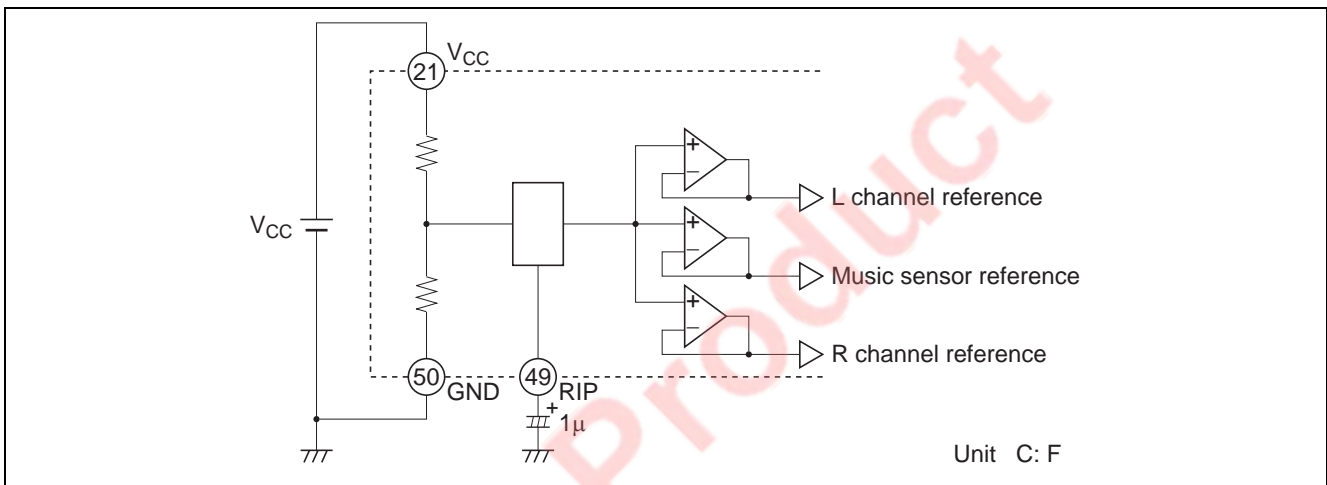

Figure 1 Reference Voltage

Operating Mode Control

The HA12226F/HA12227F provide fully electronic switching circuits. And each operating mode control is controlled by parallel data (DC voltage).

Table 2 Control Voltage

Pin No.	Lo	Mid	Hi	Unit	Test Condition
15, 16, 17, 18, 20, 22, 23 ^{*4} , 25	-0.2 to 1.0	—	4.0 to V _{CC}	V	Input Pin Measure
19, 24	-0.2 to 1.0	2.0 to 3.0	4.0 to V _{CC}	V	

Notes: 1. Each pins are on pulled down with 100 kΩ internal resistor.

Therefore, it will be low-level when each pins are open.

But pin 24 is mid-level when it is open.

2. Over shoot level and under shoot level of input signal must be the standardized (High: V_{CC}, Low: -0.2 V).

3. For reduction of pop noise, connect 1 µF to 22 µF capacitor with mode control pins.

But it is impossible to reduce completely in regard to Line mute, therefore, use external mute at the same time.

4. Non connection regarding the HA12227F.

Input Block Diagram and Level Diagram

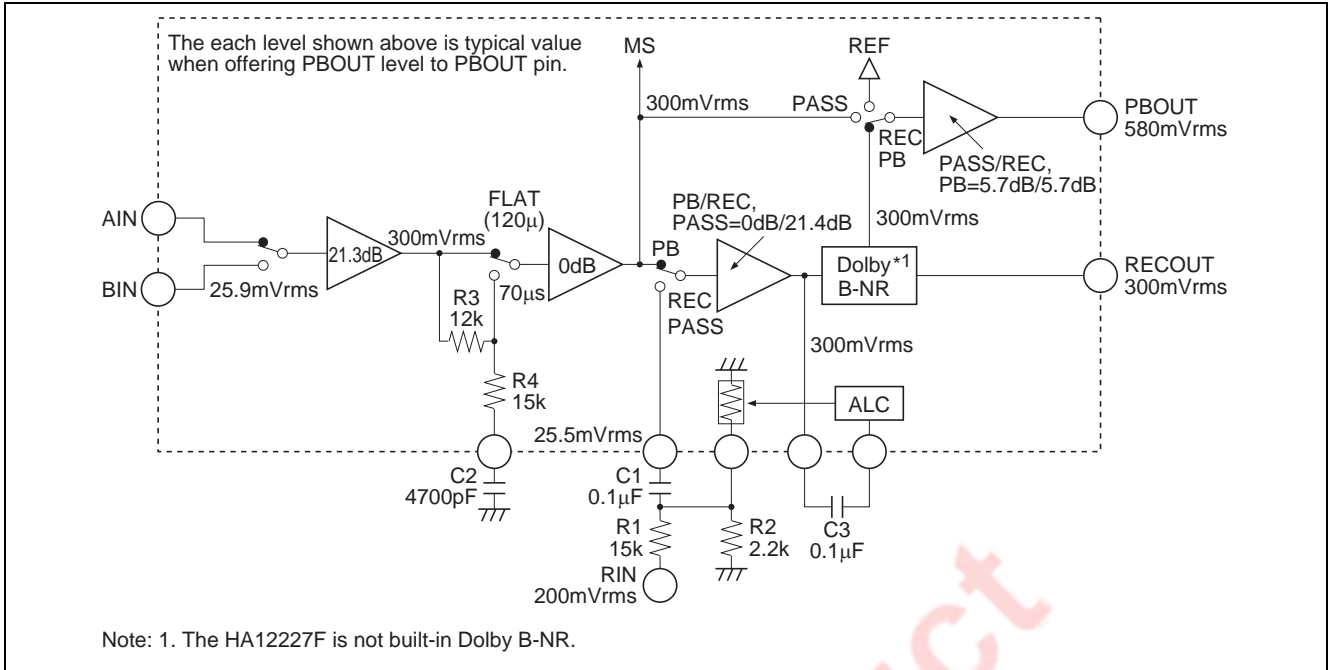

Figure 2 Input Block Diagram

PB Equalizer

By switching logical input level of pin 17 (for Ain) and pin 19 (for Bin), you can equalize corresponding to tape position at play back mode.

Figure 3 Frequency Characteristic of PB Equalizer

Time constant of detection

Figure 6(1) generally shows that detection time is in proportion to value of capacitor C13. But, with Attack*¹ and Recovery*² the detection time differs exceptionally.

- Notes: 1. Attack : Non-music to Music
 2. Recovery : Music to Non-music

Figure 6 Function Characteristic of MS

Like the figure 6(2), Recovery time is variably possible by value of resistor R13. But Attack time gets about fixed value. Attack time has dependence by input level. When a large signal is inputted, Attack time is short tendency.

Music Sensor Output (MSOUT)

As for internal circuit of music sensor block, music sensor output pin is connected to the collector of NPN type directly, output level will be “high” when sensing no signal. And output level will be “low” when sensing signal.

Connection with microcomputer, it is requested to use external pull up resistor ($R_L = 10\text{ k}\Omega$ to $22\text{ k}\Omega$)

Note: Supply voltage of MSOUT pin must be less than V_{CC} voltage.

The Tolerances of External Components for Dolby NR-Block (Only the HA12226F)

For Dolby NR precision securing, please use external components shown at figure 7. If leak-current are a few electrolytic-capacitor, it can be applicable to C5 and C23.

Figure 7 Tolerance of External Components

Low-Boost

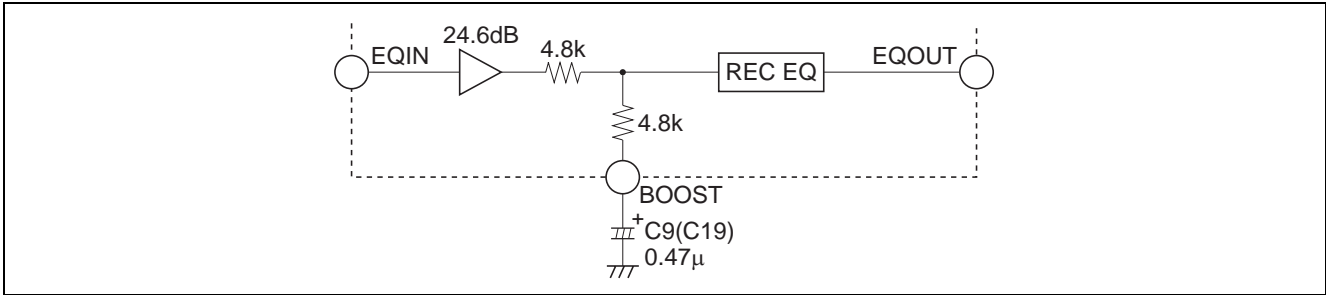

Figure 8 Example of Low Boost Circuit

External components shown figure 8 gives frequency response to take 6 dB boost. And cut off frequency can request it, by C9 (C19).

REC Equalizer

The outlines of REC Equalizing frequency characteristics are shown by figure 9. Those peak level can be set up by supplying voltage. (0 V to 5 V, GND = 0 V) to pin 10 (GPCAL).

And whole band gain can be set up by supplying voltage (0 V to 5 V, GND = 0 V) to pin 11 (RECCAL).

Both setting up range are ±4.5 dB. In case that you do not need setting up, pin 10, pin 11 should be open bias.

Note: Depending on the employed REC/PB head and test tape characteristics, there is a rare case that the REC-EQ characteristics of this LSI can not be matched to the required characteristics because of built-in resistors which determined the REC-EQ parameters in this case, please inquire the responsible agent because of the adjustment of built-in resistor is necessary.

Figure 9 Frequency Characteristics of REC Equalizer

Bias Switch

The HA12215F built-in DC voltage generator for bias oscillator and its bias switches.

External resistor R20, R21 which corresponded with tape positions and bias out voltage are related with below.

$$V_{bias} \doteq \left(\frac{R22}{(R20 \text{ or } R21) + R22} \right) \times (V_{CC} - 0.7) \text{ [V]}$$

Bias switch follows to a logic of pin 19 (B / Norm / Crom).

Note: A current that flows at bias out pin, please use it less than 5 mA.

Figure 10 External Components of Bias Block

Automatic Level Control

ALC is the input decay rate variable system. It has internal variable resistors of pin 55 (pin 44) by RECOUT signal that is inputted to pin 9 (pin 34).

The operation is similitude to MS, detected by pin 13.

The signal input pin is pin 56 (pin 43). Resistor R1, R2 and capacitor C2, external components, for the input circuit are commended as figure 12. There are requested to use value of the block diagram figure for performance maintenance of S/N, T.H.D. etc.

Figure 11 shows the relation with R1 front RIN point and ROUT.

ALC operation level acts for the center of +4.5 dB at tape position TYPE I and the center of +2.5 dB at tape position TYPE II, to standard level (300 mVrms).

Then, adopted maximum value circuit, ALC is operated by a large channel of a signal.

ALC ON/OFF can switch it by pin 15. Please do ALC ON, after it does for one time ALC OFF inevitably, for ALC time to start usefully (when switching PB → PASS, when switching PB → PASS), in order to reset ALC circuit.

Figure 11 ALC Operation Level

Figure 12 ALC Block Diagram

ALC Operation Level Necessary

ALC operation level is variable to pin 12 bias (ALC-CAL: 0 to 5 V), and its range is ± 4.0 dB.

Unnecessary, pin 12 is unforced.

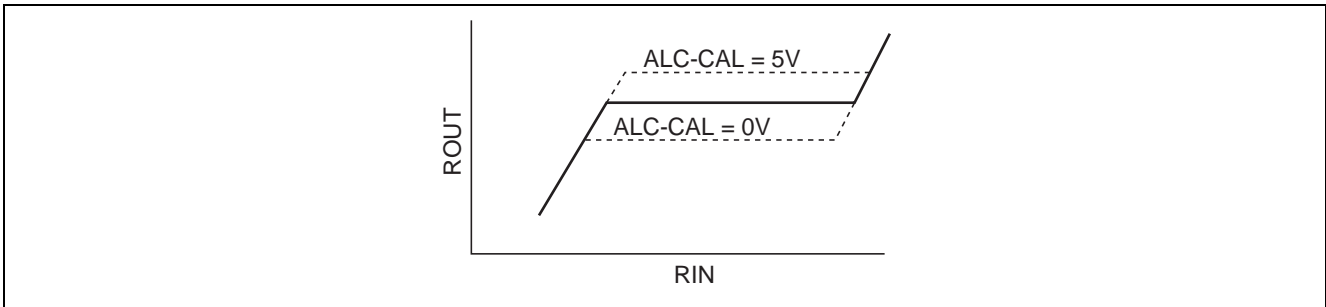

Figure 13 ALC-CAL Characteristics

About a Test Pin (Pin 2)

The HA12227F does for testing exclusive terminal for pin 2.

In mount circuit, this terminal is open or connected to GND with a resistor of 33 k Ω .

JEITA	—
Mass (reference value)	0.5 g

EOL Product

Renesas Technology Corp. Sales Strategic Planning Div. Nippon Bldg., 2-6-2, Ohte-machi, Chiyoda-ku, Tokyo 100-0004, Japan

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.
The information described here may contain technical inaccuracies or typographical errors.
Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss arising from these inaccuracies or errors.
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
