### DESCRIPTION

The HEF4538B is a dual retriggerable-resettable monostable multivibrator. Each multivibrator has an active LOW trigger/retrigger input ( $\bar{I}_0$ ), an active HIGH trigger/retrigger input ( $I_1$ ), an overriding active LOW direct reset input ( $\bar{C}_D$ ), an output (O) and its complement ( $\bar{O}$ ), and two pins ( $C_{TC}$ ,<sup>(1)</sup>  $R_{TC}$ ) for connecting the external timing components  $C_t$  and  $R_t$ . Typical pulse width variation over temperature range is  $\pm 0,2\%$ .

The HEF4538B may be triggered by either the positive or the negative edges of the input pulse and will produce an

accurate output pulse with a pulse width range of 10  $\mu$ s to infinity. The duration and accuracy of the output pulse are determined by the external timing components  $C_t$  and  $R_t$ . The output pulse width (T) is equal to  $R_t \times C_t$ . The linear design techniques in LOC MOS guarantee precise control of the output pulse width.

A LOW level at  $\bar{C}_D$  terminates the output pulse immediately. Schmitt-trigger action in the trigger inputs makes the circuit highly tolerant to slower rise and fall times.
